Trysor is a Registered Organisation with the Chartered Institute for Archaeologists and both partners are Members of the Chartered Institute for Archaeologists, www.archaeologists.net

Jenny Hall (BSc Joint Hons., Geology and Archaeology, MCIfA) had 12 years excavation experience, which included undertaking watching briefs prior to becoming the Sites and Monuments Record Manager for a Welsh Archaeological Trust for 10 years. She has been an independent archaeologist since 2004 undertaking a variety of work that includes heritage impact assessments desk-based appraisals and assessments, upland survey, building recording, evaluations & excavations and watching briefs.

Paul Sambrook (BA Joint Hons., Archaeology and Welsh, MCIfA, PGCE) has extensive experience as a fieldworker in Wales. He was involved with Cadw's pan-Wales Deserted Rural Settlements Project for 7 years. He has been an independent archaeologist since 2004 undertaking a variety of work including heritage impact assessments desk-based appraisals and assessments, upland survey, building recording, evaluations & excavations and watching briefs.

We'd like to acknowledge the help and support of Elan Valley Trust and the Elan Links staff during the project. Thanks also to David James and Vic Pardoe for providing valuable extra eyes on the ground. Martin Locock helped with proofreading and Phoebe and Zachary Hall helped getting the basic information into the database.

Er cof am

Introduction

This is the second part of a two-part report.

Part One includes a synthesis of the results of fieldwork carried out by Trysor in the Elan Links survey areas in 2022-2023.

Part Two A includes the site gazetteer based on the findings of the fieldwork and Part 2 B includes maps showing the locations of site recorded.

The site gazetteer itself is a copy of the information in the project database submitted to the Elan Links project, Elan Valley Trust in digital format.

Digital photographs have also been submitted.

Near Intact Complex

2022/2023 Survey Description:

A scheduled group of four round cairns to the south of Cnwch hill,. Only one of the cairns lies within the current project boundary, ID Number 3108. Th other three cairns are at SN9303563321, SN9317963204 and SN9315063075. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A cairn cemetery comprising of four small round cairns, each measuring between 5.5 metres and 6.5 metres in diameter and up to 0.4 metres high.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

Scheduled?: Listed?:
NPRN?: CPAT HER Record?: 132234

Destroyed Documentary Evidence

2022/2023 Survey Description:

This record refers to the annual summer camps held by the Royal Artillery in the district during the early 20th century. Penrhiw Wen was a focus of activity at some points during the period and the earthwork remains of artillery gun positions can still be seen either side of the Rhayader to Cwmystwyth road (including NPRN 269379). There is a contemporary photographic record of field camps situated in the vicinity of Penrhiw Wen before the First World War, but no physical evidence of these camp sites has been recorded in the field. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A seasonally used pre-1914 artillery camp and firing range was located somewhere on Penrhiw-wen. Possible gun positions (NPRN 269379) survive to the north of the mountain road and the shells landed on Esgair Rhiwlan to the west of the Elan valley. There is no known trace of the camp today and its exact location has not been fixed.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

These features are often ephemeral and not easily understood. Lack of awareness could lead to their disturbance or erosion.

Management Recommendations:

Detailed survey is required, more detailed mapping, and on site interpretation.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

The exact location of the camp is not known, but it was said to be located on Penrhiw-wen.

Confidence After Survey?: **Moderate**

Some elements are well known (gun emplacements) but the location of the camp sites and any surviving elements have not been proven on the ground.

Damaged Earthwork

2022/2023 Survey Description:

An area of ridge and furrow cultivation, covering about 4 hectares. It is an area to the west of the Afon Elan which was unenclosed at the time of the tithe survey in 1840 and labelled as "Mountain Land". To the west of the cultivated area is a substantial earth bank (ID number 5134), which seems to define the limits of the ploughing. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

An extensive area of ridge and furrow cultivation to the west of the Craig Goch reservoir.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

Scheduled?: Listed?:
NPRN?: CPAT HER Record?: 16593

Near Intact Structure

2022/2023 Survey Description:

A crudely constructed shelter built within a band of scree overlooking the Rhiwnant valley from the north. It was first recorded and photographed by CPAT in 1994 but not measured. In 2022 it was not found by Trysor as the grid-reference was incorrect (originally SN8823061100), but it is thought to correspond with a feature visible on LiDAR at SN8824061083, which measures 3 metres in diameter and has been created by using stone blocks to built a curving wall across the downslope side of a hollow in the scree.

Heritage at Risk 2016 Description:

A small, crude shelter formed by moving scree stones to build a sub- stone wall on the downslope side. It may be a relic of 20th century military training, perhaps during the Second World War.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **Moderate**
Not visible on aerial photographs. Not seen during field survey but visible on Lidar

Scheduled?: Listed?:
NPRN?: CPAT HER Record?: 18507

Damaged Earthwork

2022/2023 Survey Description:

The site of a drainage adit associated with the Nant y Car Lead Mine. The adit opens out just above the north bank of the Rhiwnant stream, to the west of the main mine site. It lies outside the scheduled area of the mine. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A disused mine drainage adit, recorded by CPAT, at the western end of the Nant y Car (South) mine complex and outside the scheduled area.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

Site Name: **DALRHIW LEAD MINE** Former Site Names?: DALRHIW LEAD MINE, LEAT
Site Type: **LEAT** Former Site Type?: LEAT
Period: **Post Medieval** Former Period?: Post Medieval
OS NGR: **SN8834860804** Previous OS NGR?: SN8833060810
288348,260804 343 metres AOD
Scheduled?: Listed?:
NPRN?: CPAT HER Record?: 18497

2022/2023 Survey Description:

A mine leat which can be traced running east-southeast to west-northwest for about 150 metres. At its western end it seems to begin at a mountain rill at SN8831560810 and then is visible running to the main area of the Dalrhiw mine, now ending at SN8845560771. It is possible that it was fed by water coming down the rill at its west end, but the water may have been diverted into the rill from a higher leat, ID number 9, which also carried water to the mine. At its eastern end, the leat either runs into the tips of the mine, or possible turns northeast to feed a lower water wheel on the banks of the Rhiwnant stream. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A mine leat which crosses the lower valley slope to the south of the Rhiwnant stream, from which it took water to power machinery at the Dalrhiw mine complex.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Damaged Earthwork

2022/2023 Survey Description:

A minor metal mine level, possibly a trial working, high up the valley slope to the south side of the Rhiwnant valley. The feature lies just over 200 metres southeast of the Dalrhiw mine complex and is presumed to be associated with it. It consists of a now collapsed level entrance, cut into the steep, north-facing slope. A spoil tip of development rock is spread downslope to the north of the level. Outside the level entrance, on the top end of the spoil tip, the remains of a rectangular building still survived (ID number 11). When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A small level, shown as a trial level, associated with the Dalrhiw lead mine. It shown on late 19th and early 20th century OS maps, but not on the First Edition 1:10560 map.

Damaged Ruined Building

2022/2023 Survey Description:

The remains of a small, stone-built structure outside the entrance into a metal mine level. It was probably built as a shelter for men working at this relatively remote and elevated location. The structure measures 6 metres long east to west, by 3 metres wide internally. The north side was left open and the south side is a revetment wall built into the slope. Two small recesses were built into this revetment wall. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A rectilinear building alongside trial level PRN 18484. Its purpose is not known.

Damaged Natural Feature

2022/2023 Survey Description:

A natural spring which appears to have been used by the occupants of the nearby Llwyn Dale cottage, ID Number 14, as a source of water in the early 20th century. A trackway is shown on the 1905 Ordnance Survey map running from the spring towards the house. The site of the spring is now represented by a hollow which was dry and overgrown with dense bracken when visited in June 2022, as part of the NLHF funded Elan Links project. It is likely that the hollow holds water during wet periods.

Heritage at Risk 2016 Description:

A natural spring on the northern side of the Rhiwnant stream, which was used to supply water to nearby Llwyn-dale cottage in the late 19th and early 20th centuries. A path ran between the spring and the cottage. Edge set slabs have been set just to the east of the small pool fed by the spring.

Identified Threats:

Threat?: **No**

Management Recommendations:

Damaged Ruined Building

2022/2023 Survey Description:

A rectangular, drystone structure, built of water-worn stones. It measures 9.7 metres north-northeast to south-southwest, by 3.8 metres wide. The wall bases stand up to 0.6 metres high. It is along the north-western side of the Rhiwnant on a flat river terrace. A damaged wall runs off the north-northeast corner suggesting it is a guiding wall for sheep. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and vegetation cover was grass

Heritage at Risk 2016 Description:

A rectangular, drystone long hut, built of water-worn stones. It measures 9.7 metres northeast to southwest, by 3.8 metres wide. The wall bases stand up to 0.6 metres high.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

The Rhiwnant stream is 6 metres to the south and in a flooding event could damage this structure.

Management Recommendations:

Monitor.

Damaged Ruined Building

2022/2023 Survey Description:

This cottage probably dates to the first half of the 19th century and census returns show that it was occupied into the early 20th century. The cottage was built on a terrace cut into the steep slope to the north side of the Rhiwnant stream. The stone walls display evidence of clay bonding, with no lime mortar noted apart possibly from in the extension to its west-southwest side. The ruins today show that there was building that was rectilinear in plan, standing on a west-southwest to east-northeast axis. There are three cells present. The central cell appears likely to have been the cottage, with a later extension added to the west-southwest and a possible cart shed added to the east-northeast side. Few details of the layout now survive, but it is notable that the only visible doorway into the central cell is through the wall on its east-northeast side, not through the front of the building. There was no internal doorway between the central cell and the west-southwest cell. Overall the building measured 14 metres long, west-southwest to east-southeast, by up to 6 metres wide, although the east-southeast cell is only about 4 metres wide. When it was recorded by Trysor in 2022 as part of the NLHF funded Elan Links project, the area was used for rough pasture and the building was being encroached upon by bracken.

There is an enclosed garden area separate from the cottage, to its east side (ID number 5042). During the 19th century there was a second building (ID number 5043) along the south side of the garden enclosure. This second building had been removed by the early 20th century, but a well-preserved stone-built oven (ID number 5044) still stands on its site.

When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture with bracken growing over most of the site.

Heritage at Risk 2016 Description:

A ruined cottage, now roofless, with an associated garden plot and other ancillary structures. It dates to the 19th century and fell out of use by the early years of the 20th century.

Identified Threats:

Threat?: **Yes** **Low** **Scrub Growth**

Bracken is beginning to invade the ruins

Management Recommendations:

Monitor. Manage bracken

Confidence in Accuracy of Record:

Confidence Before Survey?: **High**

Visible on aerial photographs.

Confidence After Survey?: **High**

Recorded during field survey

If visited, date of the visit: 15-June-2022 JJH & RPS Trysor

Near Intact Earthwork

2022/2023 Survey Description:

A relatively small quarry complex which consists of two quarry workings, one each side of the Nant Paradwys stream, with a moderately large spoil tip to their northern side, on the east side of the stream. A trackway (ID number 3295) ran north across this tip from the quarry to give access to the lower reaches of the Rhiwnant valley leading on to the Claerwen valley. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

At least two small quarry workings either side of the Nant Paradwys stream, with trackways running northwards to the Claerwen valley. They were active in the late 19th and early 20th centuries.

Identified Threats:

Threat?: **Yes** **Low** **Erosion**

With time the Nant Paradwys will erode the tip, but the quarries are now tree-filled and relatively stable.

Management Recommendations:

Monitor. Consider fencing above the top edges of the quarry workings to improve safety.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Recorded during field survey

Damaged Earthwork

2022/2023 Survey Description:

Originally recorded as a Bronze Age cairn by CPAT in 2005, this site was visited by Trysor in 2022 and thought to be either a damaged funerary cairn or a clearance feature. CPAT recorded that it was 6.5 metres east to west by 5 metres north to south and very low, with a hollow thought to represent the position of the cist. A stone slab, now in a gully to the south, measuring 1.1 metres by 0.6 metres was thought to be the possible capstone. None of the described features are inconsistent with this being a clearance feature, however. There is possible cultivation across the slope to the north which may have caused stone clearance to be undertaken in the past. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A possible cairn, recorded by CPAT as having a central hollow. Ground photographs held by CPAT are not convincing and this is presently considered to be a dubious site. A small drainage gully runs to the southern side and any mounds here may be derived from cleaning or digging out the gully in the past.

Identified Threats:

Threat?: **No**

Management Recommendations:

Further investigation could clarify if this cairn is funerary or not.

Confidence in Accuracy of Record:

Confidence Before Survey?: Low CPAT have ground photos of the feature.	Confidence After Survey?: Low Recorded during field survey, thought to be unconvincing as a funerary cairn.

Damaged Earthwork

2022/2023 Survey Description:

This ruined long hut is set on a raised spur between two streams which join just to the north. The structure was built on a north to south axis on an artificial platform terraced into the slope. It is defined by stony wall bases, measuring up to 1 metre wide and up to 0.4 metres high, incorporating some quite large stone boulders. Overall it measures 10 metres long, north to south, by 5 metres wide. It appears to have 3 cells, internally, with the central cell being narrower than the north and south cells. There is an entrance in the northeast corner. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A ruined long hut, now reduced to low wall-bases and measuring approximately 10 metres long north to south, but 5 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Near Intact Structure

2022/2023 Survey Description:

A drystone sheep fold which is defined by stone walls up to 1 metre high. Overall it measures 9 metres long northeast to southwest, by 5 metres wide. It has a possible blocked up entrance at its northwest corner. Part of the southeast wall had collapsed by the time it was visited in 2022. The structure is named Esgair Hafod on 19th century Ordnance Survey maps, but there was no surface evidence noted of an earlier building beneath the fold that would suggest it has origins as a long hut. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

A disused, drystone sheepfold. It measures approximately 9 metres long northeast to southwest, by 5 metres wide. The walls are still upstanding, apart from the collapse of the southeastern wall. A structure is shown here on the First Edition 1:10560 OS map and annotated as "Esgair-hafod". It is possible that the sheepfold has been built on top of an earlier long hut or cottage, reusing its stones.

Not Known Earthwork?;Natural Feature?

2022/2023 Survey Description:

In 1994, CPAT recorded a possible long hut at this location. Only the north wall base and part of the western wall were said to survive. From the surviving evidence they determined that the long hut would have measured about 8.8 metres long east to west, by 4.8 metres wide. It is not clear whether these were the remains of a long hut or some other feature. There is a line of turf-covered boulders and stones, about 11 metres long south-southwest to north-northeast but this could be a natural features. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

The site of a possible long hut, although CPAT could only identify the northern wall and part of the western wall, with no trace of the eastern or southern sides. They determined the long hut would have been at least 8.8 metres long, northeast to southwest, by 4.8 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

Damaged Earthwork

2022/2023 Survey Description:

The site of a longhouse located on a natural terrace above the western side of the Nant DyrYS stream. The building is now defined only by low, stony wall bases, measuring up to 0.3 metres high and 1 metre wide. The building measured approximately 11.5 metres long, north to south, by 5.5 metres wide. Internally, the southern third of the building had a higher floor level than the northern end, indicating a division between the domestic area (the higher level) and the byre (lower level), typical of the Welsh longhouse. There is no rubble on the site, indicating that the building would have originally been timber-framed, with wattle and clay walling and a thatched roof. 3 metres upslope to the south are slight traces of a possible ancillary structure, noted by CPAT in 1994. Ground vegetation in 2022 made it impossible to determine whether such a structure was present when it was visited by Trysor in 2022 as part of the NLHF funded Elan Links project.

Heritage at Risk 2016 Description:

Described by CPAT as either two adjacent long hut, positioned end to end and aligned north to south, or one large long hut or longhouse with multiple cells. Overall the structure measured 22 metres long by 5.8 metres wide and was defined by drystone wall bases.

Damaged Earthwork

2022/2023 Survey Description:

An area of ridge and furrow cultivation extending over 7 hectares of upland pasture to the south of Craig Llanerch Cawr. Generally the ridges run east-northeast to west-southwest, turning more to the northeast at the northern end of the area. Along the southern edge, above the Nant Ceiliog stream, the ridges run north-northwest to south-southeast over a small area. The area of cultivation does not appear to be defined by any boundary banks, but the ridge and furrow runs beneath a post-medieval boundary bank at the eastern end of the area (ID number 5037), which is shown on the 1847 parish tithe map. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture.

Heritage at Risk 2016 Description:

An area obscured by bracken, which is being periodically mown by machine. Aerial photographs show that there is some evidence for ridge and furrow cultivation ridges here, as well as at least one possible field boundary, but the extent of this "field system" has not been defined.

Damaged Earthwork

2022/2023 Survey Description:

On the northwest facing slope to the southwest of the Nant Ddu are the grassed-over wall bases of a stone structure which measures 7 metres north to south, by 4.5 metres wide. The wall bases are up to 1 metre wide and up to 0.3 metres high. The structure is terraced into the slope at its south end. A denuded earthwork bank (ID number 3331) runs off the southeast corner of the structure and runs northeast down to the Nant Ddu stream. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

A denuded rectilinear sheep fold, reduced to wall bases which are mostly grassed over. It measures approximately 9 metres north to south by 5 metres wide.

Damaged Structure

2022/2023 Survey Description:

This site is a possible recumbent standing stone. The stone slab measures 3.5 metres long west-southwest to east-northeast by 1 metre wide. At its east-northeast end is a slight hollow which has evidence of potential packing stones within it. This may indicate that the stone originally stood upright and is a Bronze Age monument. It was visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

A large recumbent stone, which measures 3.5 metres long, by 0.94 metres wide and 0.60 metres thick. It is speculated that it may be a fallen Bronze Age standing stone associated with the nearby Drygarn Fawr cairn.

Identified Threats:

Threat?: **No**

Damaged Earthwork

2022/2023 Survey Description:

A possible damaged funerary cairn, represented by a scatter of stone blocks now largely obscured by turf and reed growth. A single monolith stands within the reeds, measuring 0.4 metres high. This stone was originally recorded by CPAT as a possible standing stone, but it appears to be associated with the stone spread, which lies on a slight mound, which may indicate that this is a cairn. However, it is also possible that the stones have been gathered to this point as a clearance feature in the more recent past. It was visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

A small upright stone, some 0.40 metres high, within a small cluster of stone blocks which appear to have been artificially gathered together. This may be a marker feature, but its purpose and date are not known.

Damaged Earthwork

2022/2023 Survey Description:

A two-celled longhouse which is aligned east-northeast to west-southwest. Externally the structure measures 14.5 metres long by 4.5 metres wide, measuring 2.25 metres wide internally. It sits on an artificial platform which is cut into the slope at the west-southwest end. The drystone walls have now tumbled and survive as wall bases standing only about 0.50 metres high and up to 1 metre wide. The east-northeast cell is 5 metres long with a doorway through the centre of the south-southeast side. The west-southwest cell is 6 metres long with no visible doorway. To its north-northwest side there is stone scatter which suggests an additional structure which measured about 2.5 metres by 2.5 metres in area. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass.

Heritage at Risk 2016 Description:

The foundations of a longhouse measuring almost 19 metres in length, east-northeast to west-southwest, by 8 metres in width.

Damaged Ruined Structure

2022/2023 Survey Description:

A long hut which is now defined by low earth and stone wall bases. It measures approximately 10 metres north-northwest to south-southeast, by 5.5 metres wide. In 2022 a post and wire field boundary fence crossed southwest to northeast across the northwest end of the long hut. It was visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Described as a "small store set deeply into the southeast-facing hillside". It has orthostatic stones at its entrance and may have been paved internally. It measured 7 metres by 3.8 metres in dimensions. The narrow entrance is in the southeast side and the interior opens into a wide splay.

Identified Threats:

Threat?: **Yes** **Low** **Agriculture**

The boundary fence across the site should ideally avoid putting posts into the monument. There are currently 4 posts on or close to the long hut.

Management Recommendations:

Remove posts carefully. Do not put new posts into the long hut.

Damaged Earthwork

2022/2023 Survey Description:

A post-medieval field system consisting of earthwork banks running south from Rhosygelynnen to Craig Cwm Clyd.

Heritage at Risk 2016 Description:

A series of earthwork boundary banks and ditches are visible over a wide area on Rhos y Gelynnen. Some of these are shown on late 19th and early 20th century Ordnance Survey maps and they appear to be of post medieval date. This record also covers PRNs 65715 and 65716

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Verified during field survey

Damaged Earthwork

2022/2023 Survey Description:

A long hut set on a natural terrace overlooking a tributary valley of the Afon Arban to the south. The long hut is now partly obscured by reeds, but measures 8.7 metres north-northeast to south-southwest, by 5.2 metres wide. Its north-northeast and east-northeast sides are terraced into the slope and the wall bases are mostly turf- or reed-covered, although a ruined drystone wall is still visible forming the west-northwest side of the building. A second drystone wall (ID number 5051) was noted about 5 metres to the west of the long hut, running parallel to it. At the western edge of the terrace a small shelter was also noted (ID number 5052). When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

The remains of a rectilinear long hut, measuring 8.7 metres north-northeast to south-southwest, by 5.2 metres wide. The wall bases stand up to 0.6 metres high and are grassed over.

Identified Threats:

Threat?: **No**

Management Recommendations:

None.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

The grid reference is incorrect and the long hut is either just to the north or just to the south, but cannot be clearly seen on aerial photographs. Verified during field survey

If visited, date of the visit: 21-June-2022 RPS Trysor

Photographs:

Damaged Structure

2022/2023 Survey Description:

A recumbent standing stone measuring 3.5 metres long, north-northeast to south-southwest, by 0.75 metres wide and 0.4 metres deep. At its western end it lies above a hollow lined with packing stones. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A large stone slab, possibly a recumbent standing stone. It measures 3.6 metres long, by 0.80 metres wide and 0.40 metres thick.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

Sheep scraping is creating hollows around the stone

Management Recommendations:

Monitor

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **High**
It is not certain that this stone is of archaeological significance. Verified during field survey

Period: **Unknown** Former Period?: Bronze Age (Possible)
OS NGR: **SN9274362281** Previous OS NGR?: SN9274162279
292743,262281 450 metres AOD
Scheduled?: Listed?:
NPRN?: CPAT HER Record?: 83968

Damaged Structure

2022/2023 Survey Description:

This feature was recorded by CPAT as a possible ring cairn or hut circle, measuring 6 metres in diameter. There is some stone visible through the grass cover here, but no evidence that it formed a circle or ring. There is a line of stones to the south but this does not continue to the north. At best it is a clearance feature, but may be natural. It is now partly obscured by reeds. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A low, circular, stone foundation, which may represent a denuded ring cairn, or possibly a hut circle. According to CPAT the foundation measures 6 metres in diameter overall, the width of the defining stony ring varies between 1.3 metres and 2.4 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **Low**
Site type uncertain. Seen during fieldwork and may be a natural feature.

Damaged Earthwork

2022/2023 Survey Description:

A denuded cairn measuring 7.7 metres in diameter and up to 0.5 metres high. It appears to have been disturbed and a small, open cist is visible towards its northern side. The cairn sits on a natural terrace above the Nant y Gro stream. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A stone cairn measuring about 7.7 metres in diameter and 0.5 metres high, with a small cist exposed at the northern edge of the cairn, indicating that it has been disturbed in the past.

Identified Threats:

Threat?: **Yes** **Moderate** **Other**

Bracken obscures the cairn during summer and brack roots will be disturbing the monument

Management Recommendations:

Consider for scheduling for group value. Reduce bracken cover.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

Near Intact Structure

2022/2023 Survey Description:

A standing stone, which is 0.80 metres Tall and triangular in section with 0.4 metre wide faces. It is currently leaning 45 degrees to the north. There is a sheep scrape around the base to the north exposing possible packing stones. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A small monolith, only 0.50 metres high.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

Sheep scraping is exposing the base of the stone

Management Recommendations:

Repair sheep scrape. The HER description states that this stone was scheduled along with the Crugiau Bach Stone Circle (BR274). Cadw's scheduling description for Crugiau Bach notes it included a standing stone 40 metres north-northeast of the stone circle. This stone stands 50 metres from the edge of the scheduled area so it is not clear if it the stone referred to. The status of the stone is therefore uncertain.

2022/2023 Survey Description:

This former field boundary bank is not shown on any historic mapping, including the 1840 parish tithe map. It is thought likely that it predated the mid-19th century and was out of use by the time of the tithe survey. It is a low, denuded feature which runs for about 150 metres, north-northwest to south-southeast, down the western side of the Nant Methan valley. At its southern end it terminates close to a stone wall, which runs at right angles to it. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

This former field boundary bank is not shown on any historic mapping, including the 1840 parish tithe map. Not Known Documentary Evidence

2022/2023 Survey Description:

Handley Page Halifax LL541 crashed on the hilltop above Nant yr Haidd on the 12th of December, 1944. All nine crewmen were killed. The impact point at the main crash site is still visible on the ground as a broad scrape down a southwest-facing slope to the west of Penybwlch hill, where it merges with Moelfryn Bach. Some metal parts of the aircraft remain on the hill.

Heritage at Risk 2016 Description:

Handley Page Halifax LL541 crashed on the hilltop above Nant yr Haidd on the 12th of December, 1944. All nine crewmen were killed. The crash site is not well recorded and it is not known if aircraft parts are still present on the hill.

Identified Threats:

Threat?: **Yes** **Low** **Other**

The removal of aircraft parts by walkers and collectors

Management Recommendations:

Monitor

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

The precise crash site has not been recorded accurately and no recent assessment has been made of the site.

Confidence After Survey?: **High**

Not seen during field survey but the location has been identified from online information, aerial photographs and Lidar. Grid reference is now accurate.

2022/2023 Survey Description:

The original boundary of the Elan Valley Estate was defined to include the entire watershed of the Afon Elan, for the Birmingham Corporation, in advance of the construction of the Elan Valley Reservoirs. This boundary was marked out in the field in 1913 by hundreds of concrete boundary posts, each marked with "BC" on one face and sometimes with the initials of the adjoining landowner on the opposite side.

Heritage at Risk 2016 Description:

The original boundary of the Elan Valley estate was defined to include the entire watershed of the Afon Elan, for the Birmingham Corporation, in advance of the construction of the Elan Valley reservoirs. This boundary was marked out in the field in 1913 with a series of hundreds of concrete boundary posts, each marked with "BC" on one side, sometimes with the initials of the adjoining landowner on the opposite side. At present, 666 of these posts have been identified by various sources.

Identified Threats:

Threat?: **Yes** **Various**

Many posts have suffered natural erosion, have been accidentally or deliberately broken, moved or removed. Some have sunk into soft boggy ground.

Management Recommendations:

Monitor, replace or reset broken and fallen stones.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Verified in the field. Hundreds of the posts remain in position and have been recorded in the field.

Damaged Earthwork

2022/2023 Survey Description:

An earthwork platform cut into a north-facing slope. Vestiges of a possible structure survive as a rather indistinct feature on the platform, consisting of low earthwork wall bases on the north and east edges of the platform. The platform measures up to 11 metres north to south by 7 metres wide. An earthwork enclosure survives just to the north-northeast of the platform and there is a large area of ridge and furrow cultivation on the slope to the southwest. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

An earthwork platform terraced into the base of a north-facing slope. The platform measures 9 metres long by 4.5 metres wide, with possible wall bases along each side. An earthwork bank adjoins the platform on the north side, defining an enclosure measuring 20 metres by 17 metres, the entrance of which is in its southern side. The slopes rising to the south display evidence of ridge and furrow cultivation marks.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Damaged Earthwork

2022/2023 Survey Description:

The site of a long hut defined by low earthwork wall bases situated on a slight terrace cut into the north-facing slope. The long hut measures 8 metres long, north-northwest to south-southeast, by 4.5 metres wide. Internally it measures 6 metres long by 2.5 metres wide. The wall bases measure 0.3 metres high by up to 1 metre high. A short drystone wall or bield, some 8 metres long by 0.5 metres high and almost 1 metre wide, of later date, has been built alongside the western lateral wall, presumably of stone taken from the long hut. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A ruined long hut, measuring 8 metres north to south by 5 metres wide. The wall bases measure 1.5 metres wide by 0.30 metres high. A later drystone wall runs along the western lateral wall. 15 metres to the east there is a sunken shelter or shelter, measuring 7.5 metres north to south by 3.5 metres wide.

Not Known Ruined Building

2022/2023 Survey Description:

A building is shown at this location on the 2nd edition 1:10560 map. It appears to have been associated with the Elan Valley railway, which passes downslope to the south. It is possible that the building was a water tank, as the map is annotated "Tank" just to the east, although the water tank may have been located slightly further to the east-northeast on the line of a small mountain stream which flows southwards into the valley below. This site was not visited by Trysor during 2022 due to access issues between Craig Goch Dam and the railway cutting known as "Devil's Gulch." The building was, however, photographed by David James in 2018 and was still relatively intact. It was stone built, with red-brick quoins and door reveals and its slate roof was still partly in place. It is thought likely to have been an explosives magazine for the dam building operations in the valley in the late 19th century. LiDAR shows that a diagonal path ran west-southwest from the building back down towards the former railway below.

Heritage at Risk 2016 Description:

A tank marked on the 1905 Ordnance Survey map. It was positioned just above the line of the Elan Railway, constructed to serve the Elan Valley reservoir scheme and was presumably a water tank associated with the railway. It is absent from later Ordnance Survey maps, although the foundation platform is shown.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Visit and record

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**
Not visible on aerial photographs but shown on historic maps. Shown on historic mapping and clearly visible on Lidar

Damaged Building

2022/2023 Survey Description:

A small farm building within the Llanerch Lleyrn farmstead complex. It measures circa 8 metres long north-northwest to south-southeast, by 5 metres wide, with only the south-southeast gable wall surviving relatively intact. This building does not appear on the 1840 parish tithe map but is shown on the 1888 Ordnance Survey 1:10560 map.

Heritage at Risk 2016 Description:

A ruined, stone built, farm building within the Llanerch-lleyrn farmstead complex. It measures 8 metres northwest to southeast by 5 metres wide. The southwestern gable still stood to 2 metres high in 2004, with all other wall reduced to a few courses high.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This partial ruin will continue to decay in future.

Management Recommendations:

Monitor. Consider consolidating the standing walling.

Near Destroyed Complex

2022/2023 Survey Description:

One of the historic farmsteads of the Elan Valley. It appears on 19th century historic mapping. It consisted of a house with attached byre and a separate outbuilding. The farmhouse is said to have been abandoned in 1906 and fell into ruin thereafter.

Heritage at Risk 2016 Description:

The ruins of the Llanerch-lleyn farmstead complex include the remains of the house and an outbuilding, a trackway and several paddocks and enclosures defined by earth and stone banks.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor

Damaged Earthwork

2022/2023 Survey Description:

A 100 metre length of trackway which runs southeast from the main road to the now ruined farmstead of Llanerch Lleyn. At the time of the 1840 parish tithe map this trackway went southeast from Llanerch Lleyn, down into the valley towards Ty Nant. By the later 19th century, however, Ordnance Survey maps show that another branch of the trackway ran south-southeast from Llanerch Lleyn to the cottage of Esgair Brithgwm cottage. All these now disused trackways are still visible within the landscape today.

Heritage at Risk 2016 Description:

The earthwork traces remain of this former trackway, which runs through the yard of the now ruined Llanerch-lleyn farmstead, running northwest to southeast.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Damaged Complex

2022/2023 Survey Description:

This record was created by CPAT in 2005 for the small, post-medieval field system associated with Allt-goch Farm, which was defined by earth and stone banks, with some hedgerows. Much of the area of this field system is now hidden in woodland.

Heritage at Risk 2016 Description:

A small field associated with Allt Goch farmstead in the 19th century and early 20th centuries. It is defined by earth and stone banks, some of which have hedgerows.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Damaged Ruined Building

2022/2023 Survey Description:

The site of an agricultural building which was built on the land of Allt-Goch farm during the first half of the 20th century. The building was timber-framed, on a stone base, with a slate roof. It stood on an east-northeast to west-northwest alignment and measured about 14 metres in length overall (including outshuts built against both gable ends, and about 4.5 metres wide. By the early 20th century it was in a state of advanced ruination and most of its roof had collapsed. When it was visited by CPAT in 2006 it was noted that the building had appeared to have been used as a stable.

Heritage at Risk 2016 Description:

A 20th century building with a stone base on to which a timber-framed, timber weatherboarded building has been added. It seems to have been built after 1905 as it is not shown on the Second Edition 1:2500 scale Ordnance Survey map of that year. The building was derelict when recorded by CPAT in 2006.

Identified Threats:

Threat?: **No**

Management Recommendations:

This barn was part of Allt-goch farmstead and was not a farmstead in its own right - there was no dwelling here. Delete PRN56137 for "Alt-goch Hafod Farmstead" (sic).

Confidence in Accuracy of Record:

Confidence Before Survey?: High Visible on aerial photographs	Confidence After Survey?: High Visible on historic mapping and aerial photographs. Photographed by CPAT in 2006.

Damaged Complex

2022/2023 Survey Description:

A former farmstead, which worked until the end of the 19th century, when the area was transformed by the construction of the Elan Valley reservoir complex. Allt-goch farmhouse survived into the early 20th century, at the northern edge of Penygareg reservoir, just above the Elan Valley Railway, but fell out of use within a few years of the creation of the reservoir. A replacement house, also called Allt-goch (ID number 395) was built about 400 metres away to the east-northeast. The original farmhouse had been demolished by the mid-20th century. A field barn belonging to Allt-goch higher up the slope to the northeast (NPRN 98311) is still visible as a ruin in the landscape and the former field system of the farm (PRN 56135) is still identifiable.

Heritage at Risk 2016 Description:

A former farmstead, which worked until the end of the 19th century, when the area was transformed by the construction of the Elan Valley reservoir complex. Allt Goch farmhouse survived into the early 20th century, at the northern edge of Craig Goch reservoir, just above the Elan Valley Railway, but fell out of use and had been demolished by the mid-20th century. A field barn higher up the slope to the northeast (NPRN 98311) is still visible as a ruin in the landscape and the former field system of the farm (PRN 56135) was later incorporated into neighbouring Hafod Farm.

Identified Threats:

Threat?: **No**

Management Recommendations:

This will need a PRN. CPAT have an erroneous record for "Allt-goch Hafod Farmstead" but such a place never existed.

Confidence in Accuracy of Record:

Not Known Documentary Evidence

2022/2023 Survey Description:

This is the site of a cottage shown on the parish tithe map of 1840 and named as "Hafod Vawr" on the tithe schedule. It also appears on the 1833 First Series Ordnance Survey map and is named as "Rhos'r Hafod." The cottage had been abandoned by the late 19th century and is not shown on the 1888 1:10560 Ordnance Survey map. The site is now hidden in a wooded parcel and has not been surveyed in modern times.

Heritage at Risk 2016 Description:

The site of a possible building shown on the 1st edition 1:2500 scale Ordnance Survey map. It may correspond with the position of an outbuilding shown on the parish tithe map of 1840, adjacent to the lost cottage of Hafod. This suggests that the present field barn at Hafod (NPRN 98312) is not at the site of the original cottage and outbuilding, but some 60 metres further east.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

This site is on farmland, not open access land and was not visited in 2022. It requires a future visit to record whatever evidence survives.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**
Shown on historic mapping but of uncertain function. Not visited in 2022 but shown on historic maps and possible visible on Lidar as an earthwork,

Not Known Documentary Evidence

2022/2023 Survey Description:

The crash site of a Vickers Wellington N2813, which crashed due to engine problems, after its Polish crew had successfully baled out, 2 miles west of Rhayader. It is said that the wreckage was recovered from the top of Cefnrhydoldog and also near the site of a "deserted homestead" known locally as Esgair Penygarreg. These two locations are not close together. It appears that contemporary records noted that the crash site was at Trehesglog Farm, which may point to the crash occurring close to Pant y Llyn, 750 metres west of Trehesglog Farm and the only obvious abandoned "homestead" on the hills in this area.

Heritage at Risk 2016 Description:

Vickers Wellington N2813 crashed due to engine problems, after its crew had successfully baled out, 2 miles west of Rhayader. It is said that the wreckage was recovered from a site of a "deserted homestead" known as Esgair Penygarreg.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Further work is needed to accurately plot this crash site

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

The crash site is not known and is probably well to the west of the given grid-reference.

Confidence After Survey?: **Low**

The general area of the crash site has been identified but not the precise location.

Damaged Earthwork

2022/2023 Survey Description:

This long hut lies on a slight platform terraced into the slope at its north-northwest end. The long hut itself is defined by low stony banks but was obscured by thick bracken when visited by Trysor in 2022. It measures 6.5 metres north-northwest to south-southeast by 4.5 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

This long hut or shelter was described by CPAT as measuring 6.5 metres long by 4 metres wide.

Identified Threats:

Threat?: **Yes** **Moderate** **Footpath; Bracken**

A walkers or animals track runs over its south-southeast corner causing some erosion and the site itself is covered in dense bracken.

Management Recommendations:

Consideration could be given to managing the bracken and encouraging walkers/animals to walk around it.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Recent description. Found during field survey. The site would be identifiable once the bracken has been removed

If visited, date of the visit: 14-July-2022 JJH & RPS Trysor

Photographs:

Near Intact Ruined Structure

2022/2023 Survey Description:

A small drystone shelter oriented northwest to southeast, measuring 3 metres by 2.75 metres, situated on the edge of a steep slope. Neither the dam nor the road are visible from the shelter. Inside the interior timber and corrugated iron are present, with the doorway to the southeast side at the eastern corner of the structure. The front wall is collapsing. Local information has it that this simple structure was built by the Home Guard during the Second World War as a lookout post. A similar structure (ID number 3217) exists 1 kilometre to the south. These two shelters are both intervisible with each other and offer excellent views over Elan Village and the valley to the east and are credible as observation posts. When visited by Trysor in 2023 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was bracken, heather and bilberries.

Heritage at Risk 2016 Description:

A small, drystone shelter, which overlooks Elan Village from the hill to the north. Several timbers across the shelter suggest it has had a makeshift rood added in the past. This is clearly not a 'gun emplacement' as originally recorded in the HER, but is more likely to be a simple shepherd's shelter. It could possibly be associated with 20th century military exercises on the hills, but as its open end faces Elan Village it could not have served as a firing position overlooking the settlement as it would be open to return fire.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

Damaged Ruined Structure

2022/2023 Survey Description:

The wall bases of a drystone structure which has been interpreted as a long hut, but which may be a very different type of monument. It is oriented southeast to northwest, measuring 7 metres long, by 3.5 metres wide. It has an unusual rectilinear cell within it which measures 3.75 metres long by 3.4 metres wide and has edge set slabs around parts of its inner face, which are not characteristic of a long hut type structure.

The site is unusual, lying on the leading edge above the steep valley slope, and therefore quite exposed. It is situated on a levelled area with stone block edging along its southwest side comprised of level stone blocks. There is also a stone pavement outside its southern end with a jumble of stone to its south side.

The structure is very difficult to interpret. It has been recorded as a long hut, but could be a longhouse, or even a prehistoric funerary monument.

When visited by Trysor in 2023 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was bracken and grass.

Heritage at Risk 2016 Description:

The low, stony wall bases of a ruined long hut which measured no more than 8 metres by 5 metres.

Identified Threats:

Threat?: **No**

Management Recommendations:

A detailed survey of this feature is required to aid interpretation

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Recorded during field survey

If visited, date of the visit: 03-May-2023 JJH & RPS Trysor

2022/2023 Survey Description:

A possible pair of Bronze Age Standing Stones which consists of a recumbent stone at SN9039263252 and an upright stone at SN9038363258. The recumbent stone measures 1.76 metres long, by 1 metre wide and 0.50 metres thick. The upright stone stands almost 11 metres to the northwest and measures 0.62 metres high, by 0.44 metres wide and 0.44 metres thick. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

A possible standing stone pair, consisting of one upright stone, which measures 0.62 metres high, by 0.44 metres wide, by 0.44 metres thick. A recumbent stone, 11 metres to the east, measured 1.76 metres long, by 1 metre wide and 0.50 metres thick.

Identified Threats:

Threat?: **Yes** **Low** **Clearance**

The possible mowing or clearance of Molinia in the future could lead to impacts on these stones, which should be avoided with agricultural machinery. Molinia clearance would be beneficial however.

Management Recommendations:

Monitor. Clear Molinia from the immediate area to better reveal the stones.

Confidence in Accuracy of Record:

Intact Structure

2022/2023 Survey Description:

Originally recorded as a Bronze Age standing stone, this monolith is in fact part of the boundary bank of a medieval or later enclosure (ID number 1312) associated with longhouse ID number 3292. The boundary bank has become denuded leaving only this larger stone prominent with some other smaller stones arranged either side of it on the line of the bank. It is not a prehistoric monument. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A "standing stone" recorded by CPAT here may be a feature associated with an unrecorded medieval or early post medieval settlement site visible on aerial photographs. It is suspected that the stone may be part of an enclosure bank associated with a longhouse.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Damaged Structure

2022/2023 Survey Description:

A denuded sub-circular enclosure, which measures circa 12 metres southwest to northeast, by circa 10 metres wide. Its southwestern half is cut into the side of a low rise and is defined by a low, stony bank measuring 1.2 metres wide by 0.3 metres high, with a slight quarry gully apparent outside the bank. The northeastern half of the enclosure bank is less obvious on the ground and mostly turf covered, crossing into lower, softer ground. The enclosure may be associated with medieval or later stock herding on the mountain pastures. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A possible sub-circular hut circle or enclosure which is defined by a low stone bank, 1.2 metres wide by 0.3 metres high, and measures 10 metres by 9 metres overall.

Damaged Earthwork

2022/2023 Survey Description:

The site of a rectilinear building, now only defined by stone wall bases. It appears to have been a single-celled long hut. It has an ancillary building immediately upslope to its north side. Overall the long hut measures measured 5 metres long north to south, by 4 metres wide. A possible enclosure associated with this building was noted to the south of it by CPAT in 2005. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Described by CPAT as a "post medieval hut" measuring about 12.4 metres north to south by 4.2 metres east to west. An enclosure was noted as being to the south of the long hut in 1998.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor

Confidence in Accuracy of Record:

Confidence Before Survey?: **None**

The grid reference is clearly incorrect as no such structure is visible at this location on aerial photographs.

Confidence After Survey?: **High**

Verified during field survey. Visible on the 2023 Lidar coverage.

2022/2023 Survey Description:

A group of four small clearance cairns recorded by Robin Skeates in 1998. They were located by Trysor in 2022 (ID numbers 4002-4005) as part of the NLHF funded Elan Links project.

Heritage at Risk 2016 Description:

Described in 1998 as a cairnfield consisting of 4 small cairns, between 2 metres and 4 metres in diameter and between 0.25 metres and 0.75 metres high. CPAT also reported a group of 4 cairns here in 2004 but could only find 2 cairns in 2005 which they suggested may be natural.

2022/2023 Survey Description:

Ciloerwynt Farm continues in use as a working farm. It is well-known as the source of the medieval cruck-framed hall house which once stood here before being dismantled and rebuilt at St. Fagan's Folk Museum, Cardiff. The timbers of the house were dated by dendrochronology to the 15th century. A modern house and modern farm buildings are now in use here.

Heritage at Risk 2016 Description:

Ciloerwynt Farm continues in use as a working farm. It is well-known as the source of the medieval cruck-framed hall house which once stood here before being dismantled and rebuilt at St. Fagan's Folk Museum, Cardiff. The timbers of the house were dated by dendrochronology to the 15th century. A modern house and modern farm buildings are now in use here.

Identified Threats:

Threat?: **No**

Management Recommendations:

Working farmsteads were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

2022/2023 Survey Description:

A small stone pile, measuring 0.75 metres in diameter by 0.5 metres high. It may be a small clearance cairn, although it is possible that it was either modified to be a marker cairn or created as a marker cairn as an early 20th century Elan Estate boundary post stands alongside it to its northwest side. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A stone marker cairn alongside a trackway, recorded in 1998. The cairn was said to 2.5 metres by 2 metres by 0.7 metres high. In 2005 it could not be found at this location.

Converted Building

2022/2023 Survey Description:

A post-medieval house which was built on the eastern valley slope of the Elan Valley. It is thought that it was a single storey shepherding cottage which had its roof raised and a croglofft added during the 19th century. The house fell into ruin during the second half of the 20th century, but was restored by the Elan Estate in 2015 to serve as a bothy for walkers visiting the Elan Valley. The house measures about 10 metres long north-northeast to south-southwest, with its façade and doorway facing the hillslope to its eastern side. The restoration did see some changes made, including the loss of the square croglofft windows in the east-facing wall and the loss of a roofed extension to the north gable. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A post-medieval house build on the eastern valley slope of the Elan valley. Damaged Complex

2022/2023 Survey Description:

This feature is a possible stone alignment, consisting of three stones on an approximate east to west alignment and circa 6 metres long. The east stone is 0.5 metres high x 0.76 metres long x 0.12 metres thick, leaning slightly to the south with a deep sheep scour to its southern side. The middle stone is recumbent, having fallen to the south and is now hidden beneath the grass cover. The western stone is also recumbent, also having fallen to the south and measures 1.98 metres long by x 82cm wide and perhaps 18cm thick, with some sheep scouring having removed the grass cover and kept the stone exposed. It was seen at a distance during upland survey by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Three stones, identified as "Stones" on early 20th century Ordnance Survey maps and said to be a Bronze Age stone alignment. Only the eastern stone stands, the other two lie flat, with the central stone almost buried. They are positioned 1.8 metres apart and the standing stone measures 50cm high, by 76cm wide and 12cm thick.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

Sheep scrapes around the stones are problematic. Bracken encroachment is also an issue.

Management Recommendations:

Monitor. Stabilise erosion and control bracken.

Damaged Earthwork

2022/2023 Survey Description:

Two small hollows close to the west bank of the Nant Methan, to the northeast of the Manager's House at Cwm Elan Lead Mine have been recorded by CPAT as two reservoirs associated with the mine. The hollows appear very small and badly situated to supply the mine itself, which drew water to power its machinery from an extensive leat system. If the hollows represent reservoirs or water tanks they may either represent an early stage in the history of the mine or be associated with supplying water to the Manager's House, which dates to the second half of the 19th century. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

NPRN?: 261723 CPAT HER Record?: 44001

Unknown Documentary Evidence

2022/2023 Survey Description:

A stone was recorded here in 2000 but clearly given an inaccurate grid-reference. It was said to measure approximately "0.5m high x 0.4m across x 0.2m deep, supported from behind by lesser stones & 'jammed in' by small stones at the front." In 2004 CPAT failed to find the stone at this location but recorded it at another location nearby, but did not amend the grid-reference in the HER record. A photograph taken at that time suggests that this is a small boundary or marker stone and that it stands in a stony patch some 150 metres to 200 metres to the northeast of the original given grid-reference. It was not seen by Trysor during field survey in 2022 as part of the NLHF funded Elan Links scheme.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Clearance**

The stone has not been properly located and could be moved or disturbed as it is not recognised.

Management Recommendations:

Locate stone and provide a correct grid-reference

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **Moderate**
CPAT later could not find this stone The stone exists but its exact location
at the given grid reference. is unknown

If visited, date of the visit: 07-April-2022 JJH & RPS Trysor

Damaged Earthwork

2022/2023 Survey Description:

The site of a possible mine level at Cwm Elan, which was recorded by CAP 2000. It is not clear whether it is a level or not, but there is some disturbance of the surface here and a possible spoil tip some 65 metres to the south-southeast.

Heritage at Risk 2016 Description:

Described by CAP in 2000 as a circular pit with a linear bank, orientated east to west. This cannot be seen on aerial photographs and its location is not confirmed.

Identified Threats:

Threat?: **No**

Management Recommendations:

Further investigation is required to clarify whether or not there is a level and spoil tip here.

Confidence in Accuracy of Record:

Confidence Before Survey?: Low Not visible in the field.	Confidence After Survey?: Low Not seen during the 2022 field survey but recorded by CAP in 2000 and possibly visible on Lidar and aerial photographs.

Damaged Earthwork

2022/2023 Survey Description:

This denuded earthwork boundary bank appears to be shown on the parish tithe map of 1840. It runs for some 800 metres from the site of the ruined Ty'n y Ffald cottage at SN9071765692 at its northern end and runs southwest down into the Nant Methan valley, where it ends close to the stream at SN9017765142. By the time of the Ordnance Survey's 1888 1:10560 map was surveyed, this earthwork boundary had been superseded by a straighter, stone-built boundary wall (ID number 305) built close to its northwestern side. This stone wall appears then to have been built over the section of the earlier earthwork boundary bank which continued to the southwest of the Nant Methan stream. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Forestry**

Part of this boundary is within the Glannau Wood. This was a coniferous forestry block but is now an area of deciduous scrub. It could be further denuded should any tree clearance or replanting take place in future.

Management Recommendations:

Avoid damage during any future woodland operations.

Damaged Earthwork

2022/2023 Survey Description:

The site of an grass-covered, earthwork platform at the foot of a relatively steep slope. There is scattered stone representing the remains of a structure on the platform. The exact form of the structure is not obvious based on the present surface evidence. It may be that a long hut stood on the platform. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A long hut set on a terraced platform on a steep slope downslope of the Monks' Trod path. The building may be more complex than originally described by CAP in 2000 and merits resurvey. CAP recorded it as a rectangular building foundation, circa 10 metres long by 4.5 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Intact Earthwork

2022/2023 Survey Description:

A levelled area, which may be an artificial building platform, cut to a depth of 0.5 metres into the gentle slope on its northern and western sides. The platform measured circa 9 metres northwest to southeast, by 7 metres wide. At its northwest corner, was an adjacent flat area measuring 6 metres by 3 metres. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Described by CAP in 2000 as a small platform, 6 metres east to west, by 4 metres wide, with stone rubble from a ruined building on the surface. The building may be more complex than originally described by CAP in 2000 and merits resurvey.

2022/2023 Survey Description:

This boundary bank can be traced for about 1.4 kilometres. It starts at SN9284465794 at its eastern end, runs northwards for 430 metres, turns to the west for another 220 metres, turns southwest for 340 metres and then west for 390 metres, ending at SN9188365683. It is well-preserved for most of its length, with the best sections surviving as a bank 3 metres wide at base, by 0.5 metres high with a ditch to either side. It was originally recorded as the Dol Folau Dyke I (eastern section) and the Dol Folau Dyke II (western end), but LiDAR and field evidence shows that it is in fact a continuous boundary line. Only the eastern part is shown on historic maps. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A length of boundary bank which runs northeast before curving southwards and then southwestwards for some 950 metres. It also continues southwestwards from the grid reference, after a gap, as NPRN261789. It consists of a median bank with a ditch either side, the bank being over 3 metres wide in places and up to 0.75 metres high.

Damaged Ruined Building

2022/2023 Survey Description:

A small, stone building, recorded by CAP in 2000. It measured 6 metres long, by 3 metres wide, with entrances at the southwest and northeast ends. The quoins and door reveals were lined with red bricks. Internally, there were recesses into the walls. It originally had a slate roof, as slates were scattered around the building. This may have been an explosives magazine associated with the construction of the nearby Penygarreg Dam.

Heritage at Risk 2016 Description:

The remains of a rectangular building were recorded within forestry on Gwaelod y Rhos during fieldwork in 2000. It measured 6 metres by 3 metres, and stood up to 2 to 3 metres high. Brick had been used as the quoin stones and as detail around openings. The interior was rubble filled with some roofing slate visible.

Identified Threats:

Threat?: **Yes** **Moderate** **Forestry**

Forestry operations could damage the structure

Management Recommendations:

Avoid damage during forestry operations

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **High**
Not verified in the field. Shown on historic mapping and visible on Google Earth images

Intact Structure

2022/2023 Survey Description:

Pont Hyllfan is a fine, single-arch, stone bridge, which was built in the early 20th century (after the construction of the Elan Valley dams), to carry the new road across the River Elan, below Penbont cottage. The cottage was built at some time between 1820 and 1840 and originally called Penybont Hyllfan. The "pont" element of the name indicates that there must have been a footbridge across the Elan during that period, not related to the present road bridge.

Not Applicable Documentary Evidence

2022/2023 Survey Description:

Two quartz stones were recorded here in 2000. They measured approximately 30cm x 30cm, and were 1m apart, set within boggy area on Esgair Penygareg. The stood only 20cm above the surface. CPAT failed to find them in 2002 but noted that naturally occurring quartz blocks are present across this part of the hill and assumed this example to be natural. The stones were probably relocated by David James at SN9221468846 some years later. Trysor visited again in 2022 and found other examples of quartz erratics across the area and agree with CPAT that these are all likely to be naturally occurring.

Scheduled?: RD211 Listed?:
NPRN?: 261589 CPAT HER Record?: 43877

Damaged Structure

2022/2023 Survey Description:

The site of an open Bronze Age stone burial cist. It measures 1 metre in length, north to south, by 0.8 metres wide and 0.2 metres deep, with a possible stone base. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Remains of a stone cist measuring approximately 1 metre long, 0.80 metres wide and 0.20 metres deep. There is no trace of a cairn or barrow surrounding the feature.

Identified Threats:

Threat?: **Yes** **Moderate** **Other**

Purple moor grass has spread across this area and the cist could become obscured as the ground cover increases.

Management Recommendations:

Manage the monument by cutting the purple moor grass in the immediate vicinity (2 or 3 metre circumference centred on the monument). Any work should be undertaken with agreement with Cadw and with full scheduled monument consent. Note that the monument lies 3 metres north of the boundary of the scheduled area. The scheduled area should be reviewed.

Confidence in Accuracy of Record:

Confidence Before Survey?: High Modern, coherent descriptions available.	Confidence After Survey?: High Clearly identifiable when found, although it can be obscured by high grass cover in the summer months.

Near Destroyed Ruined Building

2022/2023 Survey Description:

The site of a building which is shown on the parish tithe map of 1847 and annotated as "Penphudlan". The 1888 1:10560 Ordnance Survey map shows the same building and names it as Penrhiwlan. It was a cottage or house on the land Llanerch y Cawr at the time of the parish tithe map, although it had over 200 acres attached to it and operated as a holding in its own right. CPAT photographs from 1994 show that the northern part of the building was still standing, roofless and ruinous. In 2022, when visited by Trysor as part of the NLHF funded Elan Links project, it was found that there were no standing walls, with much of the stone from the building piled up at the west side of the levelled terrace on which the house once stood.

Heritage at Risk 2016 Description:

The site of a former house, shown on 19th century mapping as Penrhiwlan. It fell out of use during the 20th century and little now remains of the house.

Intact Building

2022/2023 Survey Description:

A small field barn which was once part of the now lost Dol y Mynach farmstead. It measures 12 metres by 10 metres and is stone-built, with a slate roof. It has three doorways in its northwest-facing wall. It was still in use in 2022 but was not recorded in detail by Trysor as part of the NLHF funded Elan Links project.

Heritage at Risk 2016 Description:

A small stone field barn which is shown as a cottage named Barw on the 1840 parish tithe map and then as Pant y Gwartheg on later Ordnance Survey maps. It was abandoned as a dwelling in the 20th century.

Not Known Documentary Evidence

2022/2023 Survey Description:

This possible Bronze Age cairn or barrow, may have been the monument which gave rise to the placename Crugyn Ci. It was first noted on aerial photographs in 2000 and although not confirmed in the field in 2022 it is visible on LiDAR available in 2023.

Heritage at Risk 2016 Description:

CAP recorded a possible round barrow at Crugyn Ci in 2000 but CPAT dismissed this in 2002 as it was based purely on aerial photographic evidence with no evidence of any barrow found on the ground.

Identified Threats:

Threat?: **No**

Management Recommendations:

Requires confirmation in the field.

Confidence in Accuracy of Record:

Confidence Before Survey?: **None** Confidence After Survey?: **High**
There is no round barrow at this location. Clearly visible on 2023 Lidar

Not Known Documentary Evidence

2022/2023 Survey Description:

A record for an earlier farmhouse at Hirnant. A small, square building is shown at Hirnant on the 1840 tithe map. The RCAHMW have recorded that a house and barn dating to around 1850 stood on the farmyard in the late 20th century. They also suggest that the barn was added to the east end of the house at some point. There is historic photographic evidence to confirm this theory. The 19th century house was succeeded by the present house, which stands to the north of the road (ID number 5132) by the early 20th century. The earlier house was retained for much of the 20th century, still attached to the barn, but it was demolished by the end of the century. The barn still remained in use in 2022.

Heritage at Risk 2016 Description:

The farmhouse at Hirnant currently stands at this location, to the north of the road and the farmyard and outbuildings. The RCAHMW have described the house as adjoining the barn and cowhouse to the south of the road, but there is no map evidence that such a house existed. The large barn present in the group may be an early 20th century replacement of an earlier cottage, built when the farm was remodelled by the Birmingham Corporation around the same time as the present farmhouse was constructed, but this is not certain.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads and cottages in use were not included in the 2022 Trysor survey.

Destroyed Documentary Evidence

2022/2023 Survey Description:

A modern agricultural barn now stands on the site of Cae-llaith. It is documented that a house at "Kayhayth" was granted to a Howell at the time of the Dissolution and that there was a house at Cae-llaith as early as 1579. Cae-llaith is shown on the tithe map, but not named and appears to have been in use as a field barn. It is again shown on the 1888 Ordnance Survey map and named as Cae-llaith, but again appears to have been a field barn on the land of Troedrhiwdraen. The stone barn had a 1790 date on a beam, and was recorded as a two-bay barn and cowhouse in the 20th century. This stone barn was removed by the later 20th century and replaced by the present steel-framed sheds.

Heritage at Risk 2016 Description:

Stone built farm range with a barn and cowhouse.

Damaged Structure

2022/2023 Survey Description:

A pair of standing stones, one of which is now recumbent and the other leaning significantly to the northeast. The stones are almost certainly a damaged example of a Bronze Age Stone Pair. The recumbent stone measures 3.5 metres south-southeast to north-northwest, by 0.5 metres wide. It lies flat on the ground and is partly turf covered, indicating that it has lain in this position for a considerable period of time. The second stone is found some 3 metres to the northeast. This stone stands but leans at a sharp angle to the northeast. The visible stone measures about 2 metres in length and is about 0.8 metres wide at its base. This second stone sits in a sheep scrape. These stone were described as the "Pen Garn Ddu Stone" by the Royal Commission n 1913, at which time the recumbent stone was almost hidden in the ground surface and the standing stone obscured by a pile of wooden staves. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Two long stones, scheduled as a damaged stone pair. One is recumbent and partly turf covered and measures 3.5 metres long by 0.5 metres wide. The second stone leans to a point that it almost touches the ground, and is about 2 metres long by 0.8 metres wide. This second stone was described as being "60 inches" high by the RCAHM in 1913.

Identified Threats:

Threat?: **Yes** **High** **Erosion**

The northeastern stone is being affected by sheep scraping around its base.

Management Recommendations:

Repair sheep scrape appropriately. The Scheduled Area does not cover the monument and needs amending.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **High**
The grid reference appears to be incorrect and the stones are situated outside the scheduled area. Verified during field survey in 2022

If visited, date of the visit: 04-April-2022 JJH & RPS Trysor

Near Intact Structure

2022/2023 Survey Description:

The position of two header tanks which held water for use at the nearby Nant y Car mine. They were described by CAP in 2004 as two rectangular hollows, with an upper tank measuring 10 metres by 5 metres and a lower tank measuring 10 metres by 3 metres. Waterlogging and vegetation made their identification difficult in 2022, although the general form of the hollows was discernible and evidence of stone facing on the defining banks and cuts was noted. The water was fed to the tanks via a leat running from the southwest, ID number 5075, and a second leat carried water to the working area of the mine to the northeast. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

The leat and tank system of Nant y Car mine has not been mapped in detail. Further survey work is required.

Confidence in Accuracy of Record:

Damaged Structure

2022/2023 Survey Description:

This feature is shown on the Second Edition 1:10560 Ordnance Survey map of 1905 and has been misidentified previously as a hut. It was in fact a small, square, fenced enclosure created after the completion of construction on the Craig Goch dam and planted with Scots Pines. In 2022 the pines still stand, though the enclosing boundary fence no longer exists.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

The fence has long vanished and the pines are now a century old.

Management Recommendations:

Manage pines, replace dead or fallen trees with new Scots Pines and reinstate the fence to protect the trees from grazing animals.

Intact Building

2022/2023 Survey Description:

A mid-19th century barn at Hirnant farm. The farmhouse was formerly attached to its western gable, but was replaced by a larger house to the north by the early 20th century and then removed by the early 21st century. It is thought that the barn post-dated this farmhouse.

Heritage at Risk 2016 Description:

This record refers to the barn at Hirnant Farm, Elan Valley, which is a simple building with mixed stone and timber walling measuring 13 metres east to west by 8 metres wide. The RCAHMW description records that a later house was attached, circa 1800, but there is no evidence of such a house on historic mapping. It is possible that the barn replaced an earlier house in the early 20th century when the present farmhouse, to the north of this building, was built by the Birmingham Corporation.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads and cottages in use were not included in the 2022 Trysor survey.

Intact Complex

2022/2023 Survey Description:

An upland farmstead, with the house and buildings close to the Claerwen Dam. There has been a farm here since at least the early 19th century.

Heritage at Risk 2016 Description:

This is a post-medieval farmstead on the Elan Estate. The farmhouse is on the valley slope to the western side of the Claerwen Valley, sheltered by a rocky hill immediately to the west. In modern times the Claerwen Dam has been built 100 metres to the north, with its spillway immediately in front of the property. Nevertheless this remains in occupation as a working upland farm.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Verified in the field. Verified during field survey

Intact Building

2022/2023 Survey Description:

A small farm outbuilding, measuring less than 10 metres by 5 metres, which stands to the southeast corner of Hirnant farmyard. It was the stable and carthouse of the farmstead and has been recorded as having an 1881 datestone. It is shown on historic Ordnance Survey maps from 1888 onwards, but is not on the 1840 parish tithe map. It has a slate roof and remains in good condition in 2022.

Heritage at Risk 2016 Description:

A single storey, stone-built farm building, part of Hirnant farmstead. It measures 10 metres east to west by 5 metres, with a doorway on the northern side.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

The NGR could be improved, not the same as the HER record. Not included in the 2022 field survey

Converted Complex

2022/2023 Survey Description:

The former farmstead of Cwm Clyd includes a 20th century farmhouse (ID number 42), a barn (ID number 43), a stable and carhouse (ID number 44), a outdoor privvy (ID number 45) and the earlier farmhouse with an attached cow house (ID number 228). The building buildings were subject to a Level 2 building recording by Trysor in June 2018 and its building was retained and repaired when Cwm Clyd was converted for visitor accommodation in 2021.

Heritage at Risk 2016 Description:

A small farmstead situated alongside a minor tributary stream to the northern side of the Claerwen valley. The house and buildings are set within a post medieval field system on the lower valley slopes. An early 19th century house with attached byre served this farmstead in the past but a modern, timber-framed house is now the dwelling here, the original house and byre still stand however.

Identified Threats:

Threat?: **No**

Management Recommendations:

Working farmsteads and cottages in use were not included in the 2022 Trysor survey. Cwm Clyd farm has had a full building survey in modern times.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

Damaged Structure

2022/2023 Survey Description:

This feature is shown on the Second Edition 1:10560 Ordnance Survey map of 1905 and has been misidentified previously as a hut. It was in fact a small, square, fenced enclosure created after the completion of construction on the Craig Goch dam and planted with Scots Pines. In 2022 the pines still stand, though the enclosing boundary fence no longer exists.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

Management Recommendations:

Manage pines, replace dead or fallen trees with new Scots Pines and reinstate the fence to protect the trees from grazing animals.

Damaged Ruined Building

2022/2023 Survey Description:

The site of the now ruined cottage at Llust Calettwr, which is aligned northeast to southwest and measures approximately 10 metres in length by 5.5 metres wide overall. A ruined byre is attached to the southwest of the cottage, but the two adjoining cells appear to be of one build. A later cell was added to the southwest end of the byre, with another cell attached to its southeast side. This may indicate that the cottage ruins were incorporated into a sheepfold after it ceased to be occupied. A yard area lies to the southeast of the cottage. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

This single room, single storey house appears on the parish tithe map in the mid-19th century. It was extended later in the century by the addition of a byre to its southwestern end and an enclosed yard or fold to the south. The structure is now a ruin.

Damaged Ruined Building

2022/2023 Survey Description:

A ruined byre or cow shed attached to the southwest side of the ruined cottage of Lluest Calettwr. The byre measures approximately 8 metres long northeast to southwest, by 5 metres wide. It appears to have been built at the same time as the cottage as there are no joints in the drystone walls separating the two parts of the building. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

This byre appears to have been added to the southwestern end of the house at Lluest Calettwr sometime after the parish tithe map was drawn up in the mid-19th century. The tithe map shows the Lluest as a simple rectangular building.

Damaged Ruined Building

2022/2023 Survey Description:

The site of the now ruined farmstead of Lluest Calettwr. The now ruined cottage stood at the northeast corner of the building complex and was aligned northeast to southwest, measuring approximately 10 metres in length by 5.5 metres wide overall. A ruined byre is attached to the southwest of the cottage, measuring 8 metres northeast to southwest, by 5.5 metres wide. These two adjoining cells appear to be of one build and there are no joints separating them in their drystone walling. A later cell was added to the southwest end of the byre, with another cell attached to its southeast side. This may indicate that the cottage and byre ruins were incorporated into a sheepfold after it ceased to be occupied. A yard area lies to the southeast of the cottage. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

The ruins of a single roomed, single storey dwelling, which had a chimney in its northeastern gable. Another building or extension was added to the southwest of the house, presumably for housing stock animals, with another compartment added to the southeastern side of this animal housing. An enclosed yard, defined by a wall, adjoined the southern side of these buildings. These features are all set within a large intake enclosure, defined by an earthwork bank, which extends across an area of approximately 350 metres x 200 metres up the slopes to the northern side the Calettwr stream.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Verified in the field. Verified during field survey

Near Intact Earthwork

2022/2023 Survey Description:

A sub-circular earthwork enclosure on sloping ground to the northwest of the Nant Llwyd stream. The enclosure measures about 30 metres in diameter overall, and is defined by a broad earthwork bank, with traces of an internal ditch in places. An evaluation excavation by Trysor in 2021 found no dating evidence, but did confirm the existence of an internal ditch. The purpose and date of this enclosure remains uncertain.

Heritage at Risk 2016 Description:

An unusual circular feature, which has been interpreted as a possible ring cairn or an enclosure. It is a circular earthwork, partly terraced into the gentle slope and about 15 metres in diameter, defined by a low earth bank.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor

Confidence in Accuracy of Record:

Confidence Before Survey?: High Verified in the field.	Confidence After Survey?: High Recorded during field survey, subject to geophysical survey and an evaluation excavation.

Destroyed Documentary Evidence

2022/2023 Survey Description:

A sub-rectangular enclosure, measuring circa 30 metres north-northwest to south-southeast, by 10 metres wide, was recorded by CAP in 2000 from historic map evidence, but no trace of such an enclosure was found in the field at that time. It appears on the 1888, 1905 and 1953 1:10560 scale Ordnance Survey maps but not on later aerial photographs or LiDAR. It is presumed that it was a post and wire fenced enclosure, of which no trace now survives. The site was not visited by Trysor in 2022 for this reason.

Heritage at Risk 2016 Description:

A sheep fold shown on the 2nd edition Ordnance Survey map in 1905, but no longer in existence by 2000

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **None** Confidence After Survey?: **High**
This fold was not found by CAP in 2000 and no longer survives. It may have been a post and wire enclosure. Not visited but apparently destroyed.

Near Intact Structure

2022/2023 Survey Description:

A former sheep fold, consisting of partially turf-covered, rough stone wall bases of a sheep fold. The wall bases stand up to 0.5 metres high. It is oriented north-northeast to south-southwest and built on an east-southeast facing terrace below a natural crag. It measures 8 metres by 5.5 metres externally and 6.3 metres by 3.5 metres internally. There is an entrance in the lateral wall facing east-southeast, slightly to the south of the terrace. It is possible that the structure was originally a longhut, possibly associated with a nearby enclosure (ID number 5089), which is circa 80 metres to the north-northeast on the opposite side of the Nant Gris stream. The walls are circa 1 metre wide apart from the south-southwest wall which is 0.75m wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was reeds and grass.

Heritage at Risk 2016 Description:

Ruinous drystone sheepfold, measuring 8 metres by 8 metres and walls standing 0.30 metres to 0.5 metres high in 2000.

Damaged Ruined Building

2022/2023 Survey Description:

A ruined longhouse site, consisting of the drystone wall foundations of a rectilinear building. The walls averaged 0.7 metres wide and defined a building measuring 12.5 metres long southwest to northeast, by 5 metres wide. The building was divided into two cells. The southwestern cell was at a higher level and measured 5.5 metres by 3.6 metres internally. It was divided from the lower, northeast cell by a 1 metre wide wall. The northeast cell measured 5 metres by 3.25 metres internally and the fact that it as a lower floor level that the southwest cell indicates that the building was in the longhouse tradition. A possible yard area was noted to the northwest side of the longhouse, measuring about 12 metres long by 4 metres wide. This building is shown on the 1840 parish tithe map and named as "Clettwr Troedrhiwdrain".

Heritage at Risk 2016 Description:

The drystone remains of the post-medieval cottage, shown on the mid-19th century parish tithe map as Clettwr Troedrhiwdrain. The building is ruined to wall bases and measures approximately 14 metres long by 9.5 metres. By the early 20th century it is shown on Ordnance Survey maps it was shown as a "Sheepfold".

Identified Threats:

Threat?: **No**

NPRN?: 15034 CPAT HER Record?: 80835;166045

Damaged Structure

2022/2023 Survey Description:

This long hut was first recorded by the RCAHMW in 1981, as the Pen Maen Wern Hut, a 10.7 metre long building. However, the original record wrongly placed the site at the confluence of the Llwyndnant and Nant y Wern streams, further to the north it seems. CPAT found the long hut in 2000 during their Deserted Rural Settlement survey and recorded in under the name Nant y Wern, Long Hut III but do not appear to have made a connection between this site and the original RCAHMW record. CAP did not find the feature in 2004, but appear to have been searching at the wrong grid-reference, at the Nant y Wern - Llwyndnant confluence. CPAT's record is essentially correct, which states that the long hut measures 10 metres long, east to west, overall, by 5.6 metres wide. It was a single celled long hut with an entrance through the north side. The wall bases stand up to 0.5 metres high but are very spread, being over 1 metre wide.

Heritage at Risk 2016 Description:

Described by the RCAHMW in 1981 as a 10.7 metre long Long Hut, with a smaller structure close by, then described as a 6 metre by 3 metre structure by CAP in 2004. It is not clear where this structure is as the grid reference appears to be incorrect.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

There is no evidence of a site here on aerial photographs and the grid-reference would appear to be incorrect, although the NMR description places the structure in this general location.

Confidence After Survey?: **High**

Not visited during the 2022 field survey but visible on Lidar and aerial photographs, also photographed and sketched by CPAT in 2000.

NPRN?: 261543	CPAT HER Record?: 4193

Damaged Earthwork

2022/2023 Survey Description:

This feature was originally recorded as a possible Bronze Age cairn or barrow by Davies & Webster in 1977. CPAT visited the site in 1998 and determined that the feature may have been a longhouse or long hut which had been so damaged that its character could not be properly defined, but that it might have measured 15 metres long, northwest to southeast, by 4 metres wide, noting that an earthwork bank (ID number 3374) passes along the east side of the feature and that a possible "pipe corridor" associated with a steel pipe (ID number 3373) protruding from the surface nearby may have damaged the monument.

The feature was again examined by CAP in 2000, when it was described as a long hut, measuring 7.5 metres by 3.5 metres.

Trysor examined the site in 2022 and agreed with the original identification of the feature as a Bronze Age cairn. Firstly, the situation of the feature in an elevated, open position with good views up the Elan valley to the north-northeast is more typical of a cairn. Long huts in the area are typically found in sheltered, valley locations. The feature itself is thought to have been disturbed by partial robbing when the boundary bank (ID number 3374) was built alongside it, with stone similar to that in the feature visible in the adjacent section of the bank. The steel pipe (ID number 3373) protruding from the ground caps a geological borehole and is not associated with a pipeline. It was seen as a disturbed cairn or barrow, measuring about 4.5 metres in diameter. Some upright and leaning thin stones around the edge of slight mound may represent the remains of a kerb. It was noted that the short grass on the mound was very different from the vegetation surrounding the feature, which is dominated by purple moor grass. This implies that the mound is stony and dry. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass on the feature.

Heritage at Risk 2016 Description:

Identified Threats:

Damaged Ruined Building

2022/2023 Survey Description:

The cottage and byre of Lluest Calettwr stand to the north side of a rectilinear, multicelled drystone enclosure or fold which appears to have been added after the construction of the cottage and byre. The fold includes a narrow cell added to the southwest gable of the byre, which then wraps around the southeast side of the byre. The ground to the southeast of the cottage appears to have been levelled and a drystone wall constructed to create a yard area which then extends southwest across the southeast side of the previously described compartments in the fold, where a raised, rectangular area is seen, which is not walled but was presumably originally fenced or hedged. The fold may represent a structure added to the abandoned cottage and byre to integrate them into a sheepfold complex at a later date. The compartment added to the southwest end of the byre measures circa 5.5 metres northwest to southeast, by 3.5 metres wide overall. The main part of the fold measures approximately 18 metres northeast to southwest, by 12 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass and reeds.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

The Nant Calettwr flows within 5 metres of the southeast side of the fold and may cause erosion issues in future.

Management Recommendations:

Monitor

Damaged Ruined Building

2022/2023 Survey Description:

The ruins of a small lean-to extension against the west gable wall of Pant y Cerdin cottage (ID number 505). Its western wall is of drystone build and stands to 0.70 metres high. The wall is about 0.80 metres thick, which was as wide as the internal measurement of the lean-to, which was presumably a small storeroom or shelter.

Heritage at Risk 2016 Description:

Not Known Documentary Evidence

2022/2023 Survey Description:

It is not clear what this feature was. It was recorded as a "Spout" in 2000 but no further details were provided. It may have been a natural spring. A groove running 20 metres from west-northwest to east-southeast and 2 metres wide was seen here in 2022, but its purpose is unknown. Nothing else was seen in the immediate vicinity. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

Not verified in the field or on aerial photographs.

Confidence After Survey?: **Low**

The nature of the "spout" originally recorded is not known. It may not have been an archaeological feature.

Intact Structure

2022/2023 Survey Description:

This is the site of a steel tube which is concreted into the ground and set at a 45 degree angle leaning towards south-southeast. There is a metal cap on the end of the pipe which has the following details stamped into it;

BH462
JUL 1978
OGL
397.49
MOD

This information indicates that it is the site of Borehole 462, drilled in July 1978 at an altitude of 397 Metres above Ordnance Datum. It was probably associated with plans to create a new reservoir in the upper Elan Valley during the late 1970s and is one of several such markers in the area.

Heritage at Risk 2016 Description:

Damaged Structure

2022/2023 Survey Description:

This feature is shown on the Second Edition 1:10560 Ordnance Survey map of 1905 and has been misidentified previously as a hut. It was in fact a small, square, fenced enclosure created after the completion of construction on the Craig Goch dam and planted with Scots Pines. In 2022 the pines still stand, though the enclosing boundary fence no longer exists.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

Management Recommendations:

Manage pines, replace dead or fallen trees with new Scots Pines and reinstate the fence to protect the trees from grazing animals.

Intact Complex

2022/2023 Survey Description:

The working farmstead of Hirnant, which includes a early 20th century farmhouse (ID number 5133), the site of the now lost late-18th/early-19th century farmhouse (ID number 205), a barn (ID number 232) and stable and carhouse (ID number 238). Another small 19th century outbuilding (ID number 260) was demolished during the 20th century.

Heritage at Risk 2016 Description:

An upland farmstead on the Elan Estate. The house and outbuildings stand close to the west of the Craig Goch reservoir, with the road from Pont ar Elan to Elan Village running between the house and outbuildings. The farm has extensive grazing on the common to the west. The farmhouse dates to the early 20th century and was built in a new location to the north of the road, separate from the farm buildings. The small stable block is dated to 1881.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Verified in the field. Not included in the 2022 field survey

Damaged Ruined Building

2022/2023 Survey Description:

This stone-built, roofless and ruinous building served as a barn to the nearby house at Cringwm, which stood about 20 metres to the southeast. The barn appears to be shown on the 1820 Ordnance Survey Original Surveyors' Drawings, and may be shown on the parish tithe map of 1844, but not clearly. It is shown on the 1888 1:10560 Ordnance Survey map, with the house still standing nearby. The house had been abandoned by the time of the 1905 edition of the Ordnance Survey map but the barn continued to be in use. The barn is shown as a disused building on the 1954 Ordnance Survey map. The ruin measures about 9 metres long, north-northwest to south-southeast, by 6.5 metres wide. The east facing wall has collapsed but it is evident that the building was entered from this side. The remaining walls stand up to 3 metres high.

Heritage at Risk 2016 Description:

The ruins of a small cottage which had two rooms and only measured 8 metres north to south by 6 metres wide. It is now roofless.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This roofless ruin will continue to decay in future

Management Recommendations:

Monitor. Remove tree growing within the ruin

Damaged Ruined Building

2022/2023 Survey Description:

The former byre or cowhouse attached to the northwest gable end of the now ruined farmhouse of Llannerch-ty-newydd. The byre was still recognisable when visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and vegetation cover was moss and bracken. It measured about 3.8 metres long northwest to southeast, by 4 metres wide. There is a blocked up doorway in the northwest gable wall, with an open pitching door higher up in the gable, indicating that it had a loft. There must have been an entrance through the northeast side as well, but the ruination of the house makes that part of the complex difficult to interpret. The northwest gable still stood to about 5 metres in height in 2022. The southeast side was cut into the slope and the base of the lateral was a revetment into the slope. The upper part of the southeast lateral wall has long collapsed.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This building is ruined and will continue to decay

Management Recommendations:

Monitor. Remove any tree branches or saplings.

Damaged Ruined Building

2022/2023 Survey Description:

A ruined, roofless, stone-built barn or byre which formed the southern end of the the house and byre arrangement at the post-medieval farmstead of Ty'n y Ffald. An examination of the ruins of the building show that it is possible that the byre is an earlier stucture and the house (ID number 440) was added to it later, with an internal wall then inserted to divide it into two roughly equal parts. The byre measures approximately 10 metres long, north to south, by 6 metres wide. The walls are of stone build with clay bonding. The western wall has been revetted into the slope, which had been cut into to create a level area on which to build the structure. The southern gable wall of the byre has collapsed outwards in its entirety. The eastern wall as a doorway to its northern end, as well as two narrow slit window openings about 1.5 metres apart. The house survived in good condition into the late 19th century and was for several years used by workers employed on the Elan Valley dams scheme. It was abandoned after the scheme was completed and fell into ruin thereafter.

Heritage at Risk 2016 Description:

A ruined cowshed or byre attached to the later farmhouse of Ty'nyffald, which has an 1839 datestone.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This roofless ruin will continue to decay in future

Management Recommendations:

Monitor

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

NPRN?: 98311 CPAT HER Record?: 54428

Damaged Ruined Building

2022/2023 Survey Description:

A now ruined barn, which was originally part of Allt-goch farmstead. 19th century maps show that a trackway led from the barn to the original farmhouse, 200 metres away downslope to the southwest. The parish tithe of 1840 shows the barn clearly. At that time the building was L-shaped, with a short wing running northeast at right-angles off the northwest end of the building. The tithe map also records that an apparent external threshing floor was located outside the northeast end of this extension.

Allt-goch was abandoned in the first decade of the 20th century when the valley was flooded by Penygarreg reservoir and a new house was built for Allt-goch, 190 metres to the east-southeast of the barn.

The barn was a roofless ruin by the time it was recorded by CPAT in 2006. It was stone-built and aligned northwest to southeast, measuring about 18 metres long by 6 metres wide. It appears to have had a slate roof. The northern half had served as a barn and the southern half had served as a cowhouse, which had a loft above, as evidenced by the presence of a pitching door in the southeast gable wall.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This now roofless barn is in a ruined condition and will continue to decay.

Management Recommendations:

Monitor. This barn was part of Allt-goch farmstead and was not a farmstead in its own right - there was no dwelling here. Delete PRN56137 for "Alt-goch Hafod Farmstead" (sic).

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

Description of original record in NMR confused as to whether it records a stone-built barn, or a timber one

Visible on historic mapping and aerial photographs. Photographed by CPAT in 2006.

Damaged Ruined Building

2022/2023 Survey Description:

The site of the former farmhouse of Llanerch-ty-newydd. This stone-built house was abandoned by the late 19th century, before the Elan Valley dam scheme was started and fell into ruin during the 20th century. The house is part of a small building range, with a byre (ID number 297) attached to its northwest gable and a small store or stable (ID number 294) attached to its southeast gable, which a smaller extension (ID number 296) beyond that.

The farmhouse measures about 7.2 metres long, northwest to southeast, by about 5.1 metres wide. The stone walls had clay bonding and are 0.6 metres thick. They survive up to 2 metres high at the corners, but the lateral walls are lower, with the northeast side, where the door would have been, has collapsed completely. The chimney was probably in the southeast gable wall, but has collapsed. A raised recess in the gable wall at the southern corner of the house was thought to be the location of a bread oven, and the hearth was probably at the opposite end of the southeast gable wall. Two window openings in the southwest-facing lateral wall, opening almost to the external ground level, were still recognisable in 2022. They were splayed slightly and both 0.9 metres wide internally and 0.8 metres wide externally.

Heritage at Risk 2016 Description:

A ruined farmhouse thought to date to about 1800 originally.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. There is a large sycamore growing from the ruin, perhaps keep fallen branches off the ruin.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**

Near Intact Structure

2022/2023 Survey Description:

A drystone boundary wall which runs for about 1km. Sections of the wall remained in good condition when seen in 2022 and it was seen to be of roughly-coursed construction with some sections of angled capping stones still in place. It starts at its northern end from a point to the south of the now ruined Ty'n y Ffald cottage at SN9068065621, runs southwest down to the Nant Methan stream, crosses the Methan valley and turns northwest, ending at SN8992064984, high up on the valley slope to the south of the Cwm Elan mine complex. To the southwest of the Nant Methan stream the wall seems to have been built over the line of an earlier earthwork boundary bank. This earlier bank continues separately to the northeast of the stream as ID number 142.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Natural Decay**

This wall has become ruined in many parts and will continue to decline.

Management Recommendations:

Monitor. Maintain well-preserved sections. The wall forms the boundary between open access land and non-open access land in this area.

Confidence in Accuracy of Record:

Damaged Structure

2022/2023 Survey Description:

This site is a drystone structure within an area of quarry working ID number 5118. It was originally described by CAP in 2000 as a possible ROC training site, with an incorrect grid-reference. When it was visited during the NLHF funded Elan Links field survey by Trysor in 2022 it was identified as a quarry shelter, part of an extensive quarry complex. The structure is aligned east to west and consists of two separate parts, each terraced into the quarry spoil heaps. Both parts are built of unmortared flat mudstones, and form three sides of a rectangle. The open sides of each rectangle face each other but are slightly offset. The walls are a maximum of 1.5 metres high. Internally at the base of the eastern wall is a small recess, 0.4 metres wide and 0.3 metres high.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

Manage along with the rest of the quarry complex

Confidence in Accuracy of Record:

Confidence Before Survey?: **None** Confidence After Survey?: **High**
It is thought that the grid reference Recorded during field survey
is incorrect and that this is a feature
in the quarry complex to the east.

Destroyed Documentary Evidence

2022/2023 Survey Description:

The site of Penbont cottage is now occupied by the much larger Penbont Tearooms. The cottage was of 19th century date and is shown in historic photographs to be a small, stone building. The door was in the eastern wall, overlooking the road below, with a window to each side. A half-window above the northern ground floor window suggested the existence of a crogloft in the roof space. There was a large chimney rising above the southern gable end. There was a small timber or corrugated steel shed attached to the northern gable wall. Early 20th century photographs show that there was a small outhouse, presumably a WC, at the end of the garden plot to the south of the cottage.

Heritage at Risk 2016 Description:

A Victorian house which has recently been used, seasonally, as the Penybont Tea Rooms.

Not Known Documentary Evidence

2022/2023 Survey Description:

This feature was described as an oval platform, measuring 8 metres in diameter but up to 2 metres high, by CAP in 2002. LiDAR imagery shows that it is likely to be the spoil tip of an undated mine working (ID Numbers 3313 & 3353), which is located further upslope to the south-southwest. It appears to extend for about 90 metres northeast to southwest, narrowing to the southwest, and to partially obscure a post-medieval field boundary bank. The original site of Cringwm cottage appears to be on the northeastern end of the feature, but if it is a spoil tip, it is unclear whether the house was built on tip or that the tip has subsumed the house. The house was described by Stephen W. Williams in 1898 as having been in good repair until the late 19th century but to have fallen into neglect by that time.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

This feature and Cringwm require a detailed survey

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

The grid reference does not correspond with the location given in the CAP description of 2000.

Confidence After Survey?: **Moderate**

Not seen during field survey but identified from Lidar

Damaged Ruined Building

2022/2023 Survey Description:

This ruinous stone building was built in the mid-19th century as the mine office and manager's house for the Cwm Elan Lead Mine. It was abandoned by end of the 19th century and has been a roofless ruin for over a century.

Heritage at Risk 2016 Description:

This ruined building is stone built, with red-brick arches above the doorways and windows. It is said to have been the office building for the Cwm Elan Lead Mine, which closed in 1876.

This building has erroneously been associated with the cottage of Pengwaidd, which is shown on the parish tithe map of 1840 and predates the mine office. Pengwaidd was actually at the site of the mine blacksmith's workshop (NPRN261471), further to the west. The garden plot associated with Pengwaidd is still visible to the north of the ruined smithy (PRN18459, NPRN261470).

Identified Threats:

Threat?: **No**

Intact Complex

2022/2023 Survey Description:

The site of Penygarreg Farm. The buildings around the farmyard consist of the farmhouse (ID number 1248) to the north of the yard and an L-shaped outbuilding range (ID number 792) to the south. In modern times a larger agricultural shed has been built a short distance upslope to the north. The farmhouse is shown on the parish tithe map of 1840, as well as an outbuilding to its south, which may still form part of the present outbuilding range.

Heritage at Risk 2016 Description:

A working farmstead, of likely 18th century origin.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

Damaged Complex

2022/2023 Survey Description:

The site of the Cwm Elan Lead Mine, which operated between 1796 and 1877. The remains of the mine office, smithy, crusher house, wheelpits, buddle, leats, settling tanks, shafts and levels are still visible within the complex. It is protected as a scheduled monument.

Heritage at Risk 2016 Description:

Cwm Elan lead mine developed initially in the late 18th century and was worked until final closure in 1876. Significant surface remains are present at the complex, including several ruined mine buildings, as well as old leats, trackways, mine shafts, levels and adits and their associated spoil tips.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. Scheduled site.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High**
Visible on aerial photographs.

Confidence After Survey?: **High**

The scheduled metal mines of the area were not included in the 2022 field survey as they have been surveyed separately by CPAT.

Not Known Building

2022/2023 Survey Description:

The RCAHMW have recorded an "old house" close to the "new house" at Troed-y-rhiw-felen. It was visited in 1989 when it was said to be "a ruined and roofless shell dating to around 1800". It was also said that it was a lobby-entry building with an end chimney. The fireplace had "an intact round-headed oven, with a low done made of tightly packed small stones in a spiral-like construction."

This "old house" accompanied a newer house, also abandoned by 1989. When visited in 2023, it was found that the "new house" had been brought back into use. There was no trace of the "old house", unless the garage to the south of the present house is actually the site of the "old house", possibly incorporating some of its fabric.

Heritage at Risk 2016 Description:

This building is the original house at Troedrhiwfelen, standing to the south of a late 19th century dwelling. It seems that the original house became an outbuilding to the new house but fell into ruin during the 20th century. By the early 21st century it had been re-roofed and reused in association with the restored dwelling to the north.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High**
Visible on aerial photographs

Confidence After Survey?: **Low**
It is not clear which building was described by the RCAHMW in 1989 as no building matching the description now stands. It is possible that the building has been removed or heavily modified as the current garage.

Damaged Structure

2022/2023 Survey Description:

A Bronze Age funerary cairn which bears evidence of disturbance. The cairn mound was obscured by bracken when visited by Trysor in 2022, and is largely turf-covered. The central cist of the cairn has been opened and its capstone dragged aside to the southeast. The cairn measured 5 metres in diameter and 0.5 metres high. The cist measured 1.5 metres long, northeast to southwest, by 0.75 metres wide and 0.6 metres deep.

Heritage at Risk 2016 Description:

A possible denuded round barrow with a possible cist exposed in the centre. The "cist" appears quite high up in the "barrow" mound however and there is a suspicion that this could be a natural feature. The cist measures 1 metre by 0.8 metres, which is a credible size for such as feature.

Identified Threats:

Threat?: Yes	Moderate	Scrub Growth
Bracken invasion		

Management Recommendations:

Monitor. The scheduled area polygon does not cover the monument. The bracken needs managing.

Confidence in Accuracy of Record:

Confidence Before Survey?: Low Not visible on aerial photographs, CPAT, RCAHMW and Cadw grid-references all give different positions. CPAT seem to be most likely to be accurate.	Confidence After Survey?: High Recorded during field survey

Intact Building

2022/2023 Survey Description:

Llanerch y Cawr is a listed building, Grade II*. It is a longhouse of possible late medieval origin, with an inserted fireplace which has been dated by dendrochronology to 1588, but has post-medieval additions. It is still in use.

Heritage at Risk 2016 Description:

A traditional Welsh longhouse, built in the later 15th century. Retained as a farmhouse on the Elan Estate and used as a holiday let.

Identified Threats:

Threat?: **No**

Management Recommendations:

Listed building. Monitor.

Unknown Documentary Evidence

2022/2023 Survey Description:

A rectilinear enclosure which appears only on the 1905 1:10560 Ordnance Survey map. It does not appear on earlier or later mapping and this suggests it may have been a relatively short-lived fenced enclosure created for stock management. The area was afforested during the 20th century and remains so today, with no trace of any enclosure noted in the field when visited circa 2000.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: High Shown for the first time on 2nd edition 1:10560 OS map and was probably a post and wire enclosure, removed within a few years as it is not on later OS maps.	Confidence After Survey?: High Clearly shown on historic map at this location

Damaged Structure

2022/2023 Survey Description:

A stone cairn which is now partially turf covered. It measures 11 metres in diameter and the main body of the cairn is quite low, generally less than 0.3 metres high. Cairn stones have been reused to construct a circular drystone sheep shelter (ID number 5025) on the southeast quadrant of the cairn. Cairn stones have also been reused to raise a small marker cairn (ID number 5026) on the northern edge of the cairn. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A damaged stone cairn, measuring about 11 metres in diameter. The cairn is quite low, but a modern marker cairn and a sheep shelter have been built on top of the monument from stones taken from the cairn body.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. This cairn is named as Gro Hill Cairn III in the NMR.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Verified during field survey

2022/2023 Survey Description:

A large Bronze Age funerary ring cairn which is located on a sheltered terrace to the southern side of the Nant y Postau stream, from where there are good views to the heart of the Elan Valley and the hills beyond. The cairn is 16 metres in diameter, consisting of a stony ring, about 4 metres wide and up to 0.6 metres high, encircling a grassy, relatively stoneless, interior. Bracken cover has spread over this monument and it is difficult to appreciate during the summer and autumn months.

Heritage at Risk 2016 Description:

A probable ring cairn defined by a ring of loose stones, up to 4 metres wide (spread by creep down the slope) and some 16 metres in diameter.

Identified Threats:

2022/2023 Survey Description:

A large Bronze Age funerary cairn, which measures 15 metres in diameter and up to 0.75 metres high. The cairn is composed of relatively large stones and is thought to be intact in terms of its buried archaeology. The cairn mound has, however, been disturbed and stones have been reused to build a marker cairn, ID number 5057, and a shelter, ID number 5056, on top of the cairn. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture and vegetation cover around it was grass and bilberries.

Heritage at Risk 2016 Description:

A large stone cairn, measuring about 15 metres in diameter, by 0.75 metres high. A drystone shelter and a stone marker cairn (NPRN66811 & 66812) have been built on top of the monument, reusing some of the cairn stone.

Damaged Ruined Building

2022/2023 Survey Description:

The site of a ruined barn, which was associated with nearby Llanerchi farmhouse. It appears on the parish tithe map of 1840 and survived until the 20th century. The drystone structure is built of roughly coursed squarish blocks of local stone. Overall it measures 12 metres in length south-southeast to north-northwest, by 5 metres wide. The wall now stand up to 1 metre high at most and 0.60 metres wide. The building is divided into two with the south-southwest cell accounting for two-thirds of its length and the north-northeast cell making up the remaining third. There is an entrance at the southeast corner with possible steps up to it. There is a blocked up central door on the western side and possible blocked window to its northern side. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was within a forestry block which had been recently felled.

Heritage at Risk 2016 Description:

This ruin is shown on the parish tithe map as standing in a field known as Cae Sgubor (Barn Field) and it is evident that the building was a field barn on Llanerchi farm. It survives as a low ruin, measuring 20 metres long by 8 metres wide, the walls standing up to 1 metre high.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This ruined barn is gradually decaying through natural processes

Management Recommendations:

Monitor. Avoid damage from future forestry operations.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

Damaged Ruined Building

2022/2023 Survey Description:

The ruins of Llanerchi farmhouse now lie within a forestry block. The stone walls remain but are in a ruined condition and have been damaged by mature trees which have fallen across the site during high winds. This meant that the ruins were not safe to examine in 2022 and could not be measured or interpreted. Roofing slates were observed in the vicinity of the ruin as some pottery seen on the ground surface from a distance. The house is shown on the 1840 parish tithe map as a single building. A barn stood in the adjacent field to the north east, Cae Sgybor, 80 metres away.

Heritage at Risk 2016 Description:

Former farmhouse or cottage shown on historic Ordnance Survey maps as Llanerchi, but no trace was found when visited by CAP in 2000.

Identified Threats:

Threat?: **Yes** **High** **Afforestation**

The ruins of the house are within a mature forest plantation. Large trees have fallen across the ruins and the site is in a dangrous state.

Management Recommendations:

Clear fallen trees carefully to minimise damage to the ruin. Avoid replanting over the site.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

Shown on historic mapping but not visible on aerial photos or recently seen on the ground. May be destroyed. Verified during field survey

Damaged Structure

2022/2023 Survey Description:

A probable Bronze Age funerary cairn, which measures about 3 metres in diameter and about 0.3 metres high. It is now largely turf-covered, but some stones protrude through the grass. It was recorded as the "Esgair Gwar-y-cae Cairn" by CPAT in 1994, and again by CAP in 2000. It was then renamed by CPAT in 2005 as "Esgair Gwar-y-cae Cairn I." David James has recorded it as "Esgair Gwar-y-cae Cairn V."

Heritage at Risk 2016 Description:

A small, low round cairn, about 3 metres in diameter. There is evidence of cultivation on this slope so this may well be a medieval or post medieval clearance cairn.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Damaged Ruined Building

2022/2023 Survey Description:

The site of a long ruined field barn. A small building is shown here in the 1820 Ordnance Survey Original Surveyors Drawings. The 1849 parish tithe map and later Ordnance Survey maps show the structure but not as a standing, roofed building. It now survives only as ruined walls, reduced to their bases, indicating that the building measured perhaps 10 metres long northeast to southwest by 5 metres wide.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High**
Visible on aerial photographs.

Damaged Earthwork

2022/2023 Survey Description:

The remains of a probable longhouse, which measures 15 metres long, north to south, by 7.5 metres wide overall. It appears to have a single internal cell, but a change in floor level indicates that it would have had an internal division and is in the longhouse tradition. It sits next to a possible D-shaped stone enclosure (ID number 345).

Heritage at Risk 2016 Description:

A single cell long hut or long house measuring 14.3 metres north to south by 7.5 metres wide. It is defined by low wall base. Changes in floor level internally suggest this may be a long house.

Identified Threats:

Threat?: **No**

Management Recommendations:

Damaged Earthwork

2022/2023 Survey Description:

CPAT and CAP have previously documented that there were two buildings within a small enclosure ID number 441 on Coed y Foel. This building was said to be next to the Coed y Foed Trackway ID number 396 and measured 8 metres long, east to west, by 5 metres wide, with a possible entrance in the north side, butting up against the bank of enclosure ID number 441. Its walls were 1 metre high by 1 metre wide.

Its exact location has not been accurately plotted and the original grid references put it to the east of the enclosure. It is known that Enclosure ID number 441 was within a larger Enclosure Id number 472, which is to the middle of Y Foel hill.

Heritage at Risk 2016 Description:

Described by CAP in 2000 as the outline of a building measuring 8 metres east to west by 5 metres, attached to the outside of enclosure NPRN 261694.

Identified Threats:

Threat?: **Yes** **Moderate** **Afforestation**

The feature is not well recorded and now lies in an afforested block

Management Recommendations:

Ensure the feature is located and is not damaged when the trees are harvested. Survey when the opportunity arises.

Damaged Earthwork

2022/2023 Survey Description:

A disused earthwork boundary bank which is shown on the 2nd edition 1:10560 Ordnance Survey map of 1905 running west-northwest to east-northeast Rhos y Gelynnen. The denuded bank is approx. 2-3m wide by 0.4m high and has ditches to either side running parallel to its course. The bank survives as an earthwork running for 420 metres from a peat cutting at SN8959163347 to the west to SN8998963203 to the west, where it meets a separate bank which runs northeast to southwest. East of this point it is not visible as an upstanding bank on the ground or on LiDAR, but the line of the bank is shown on historic Ordnance Survey mapping as running for perhaps a further 300 metres to the east-southeast. At its western end it stops at an area of peat cutting, but does appear to have turned northwest to end at SN8942363756 just above the southern side of the Cwm Coel stream. The form of the bank suggests that it represents an effort to enclose and perhaps drain part of the common during post-medieval times. The fact that probable 19th century peat cutting has interrupted the line of the bank may indicate it is early or pre-19th century in date.

Near Intact Structure

2022/2023 Survey Description:

This stone cairn was recorded as either Rhos-y-Gelwynen Cairn II or Cairn III by CAP in 2002, but with an erroneous grid reference. The monument is now obscured beneath a carpet of Molinia but the mound of the cairn is visible and stones are visible through the vegetation, including some possible kerb stones. The visible portion of the cairn measures less than 5 metres in diameter but stands up to 0.5 metres high. It does not appear to be damaged. It lies 10 metres to the south east of another cairn (PRN43951). When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A possible pair of cairns described by CAP in 2000, the largest measuring 6 metres in diameter and only 0.20 metres high.

Identified Threats:

Threat?: **Yes** **High** **Scrub Growth**

Molinia growth is now at risk of burying and damaging the monument through root action.

Management Recommendations:

The Molinia needs to be cleared from this monument, not using heavy agricultural machinery however. This cairn should be proposed for scheduling especially due to its group value with monuments on Rhos y Gelwynen.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **High**
The grid reference is not accurate and the identification of the feature as a cairn has not been verified. Verified during field survey

Near Intact Building

2022/2023 Survey Description:

A single-storey house built in the early 20th century to replace the nearby farmhouse of Allt-goch, shortly after this adjacent section of the Elan Valley was flooded by the waters of Penygareg reservoir. Although old Allt-goch was above the waterline, it was close to the reservoir and this alternative location was developed to replace it. It is stone-built, under a slate roof, with a stone chimney rising above both gable end walls. It measures about 11 metres by 11 metres. By 2022 it appeared to be disused, though still roofed and intact. A small timber-framed, corrugated steel-sheeted lean-to against its north gable had collapsed by 2022.

Heritage at Risk 2016 Description:

A single storey, 19th century house.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This house does not appear to be in use and without maintenance or use in the long term will decline.

Management Recommendations:

Working farmsteads and their buildings were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

Near Intact Structure

2022/2023 Survey Description:

A type FW3/22 concrete and brick pillbox, dating to the Second World War. The northernmost pillbox in a group of three constructed on the slope above the east of the Garreg Ddu dam to protect the dam. They still survive, but a fourth pillbox to the west of the dam was removed by the early 21st century.

Heritage at Risk 2016 Description:

A type FW3/22 concrete and brick pillbox, dating to the Second World War. One of three constructed on the slope to the west of the Garreg Ddu dam to protect the dam.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. Scheduled site. Also recorded as PRN110856. PRNs need rationalising.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs and recent ground photographs. Recorded during field survey

Near Intact Earthwork

2022/2023 Survey Description:

Originally recorded as a bank and ditch, resurvey in 2022 identified this feature as a probable Second World War W-shaped slit trench. It is one of several military fieldworks recorded across Rhos y Gelynnen in 2022. The trench is aligned northeast to southwest and measures some 12 metres in length and its about 1 metre wide by 0.5 metres deep. A low earth bank has been created to its southeast side by casting earth out of the trench. This bank curves around the trench and measures 23 metres long overall and is 2.5 metres wide by 0.5 metres high. The trench utilises a low knoll and faces southeast over lower ground. The northern end of the trench is rock cut and shallower than the rest of the trench. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A possible Second World War military fieldwork or firing trench for infantry training. It is a U-shaped trench, 1.5 metres wide by 0.5 metres deep, with a low earth bank to its eastern side, measuring 23 metres long, 2.5 metres wide by 0.5 metres high. The apex of the bank points to the east.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

Now surrounded by Molinia

Management Recommendations:

Monitor and manage Molinia spread and avoid allowing Molinia to overwhelm this feature.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

This earthwork is visible on aerial photographs but its date and purpose are not known. Recorded during field survey

If visited, date of the visit: 05-April-2022 JJH & RPS Trysor

Near Intact Earthwork

2022/2023 Survey Description:

Originally recorded as a bank and ditch, resurvey in 2022 identified this feature as a probable Second World War firing trench. It is one of several military fieldworks recorded across Rhos y Gelynnen in 2022. The feature survives as a crescentic, shallow trench which occupies an area measuring 15 metres north to south by 7 metres wide. The trench is now only 0.20 metres deep by 1.25 metres wide, with a low bank of spoil to its eastern side, 1 metre wide by 0.25 metres high. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A possible Second World War military fieldwork or firing trench for infantry training. It is a U-shaped trench, 1.5 metres wide by 0.5 metres deep, with a low earth bank to its eastern side, measuring 23 metres long, 2.5 metres wide by 0.5 metres high. The apex of the bank points to the southeast.

Identified Threats:

Threat?: **No** **Moderate** **Natural Decay**

Molinia growth is now at risk of burying and damaging the monument through root action.

Management Recommendations:

Monitor and manage Molinia spread and avoid allowing Molinia to overwhelm this feature.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

This earthwork is visible on aerial photographs but its date and purpose are not known. Verified during field survey

Near Destroyed Documentary Evidence

2022/2023 Survey Description:

A long building is shown at this location on the 1847 parish tithe map, on the boundary between field parcels 53 and 55. The map is annotated and names another building upslope to the east within parcel 55 as "Penphudlan", whilst the tithe schedule seems to imply that the lower building is part of parcel 53 and is named as "Penphudlan Homestead". It is not clear whether there two houses here, or which one was the house in 1847. By the time of the 1888 1:10560 Ordnance Survey map, only the upper was still intact and was annotated as Penrhiwlan. This lower building had largely been abandoned, with only its northern end shown as roofed. When visited by Trysor in 2022, it was found that the lower building had been removed and only an earthwork terrace and some scattered stone marked the site.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Field barn shown on 19th century maps, now virtually destroyed with few stones remaining. Recorded during field survey

Near Intact Structure

2022/2023 Survey Description:

This stone cairn was recorded as either Rhos-y-Gelynnen Cairn II or Cairn III by CAP in 2002, but with an erroneous grid reference. The monument is now obscured beneath a carpet of Molinia but the mound of the cairn is visible and stones are visible through the vegetation. The visible portion of the cairn measures 4 metres in diameter but stands up to 0.3 metres high. It lies 10 metres to the northwest of another cairn (PRN4395). It does not appear to be damaged. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A possible cairn described by CAP in 2000, measuring 5 metres in diameter and only 0.30 metres high.

Identified Threats:

Threat?: **Yes** **High** **Scrub Growth**

Molinia growth is now at risk of burying and damaging the monument through root action.

Management Recommendations:

The Molinia needs to be cleared from this monument, not using heavy agricultural machinery however. This cairn should be proposed for scheduling especially due to its group value with monuments on Rhos y Gelynnen.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **High**
The grid reference is not accurate and the identification of the feature as a cairn has not been verified. Verified during field survey

If visited, date of the visit: 05-April-2022 JJH & RPS Trysor

Photographs:

Intact Structure

2022/2023 Survey Description:

A scheduled Bronze Age standing stone which is rounded in profile and stands up to 1.3 metres high, by 1.5 metres wide. It is up to 0.4 metres thick and leans to the north. There is a sheep scrape which has created a hollow to the north side. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A squat monolith, which is about 1.2m high, by 1.75 metres wide and 0.40 metres thick. It stands just to the south of a ford across the Nant Llyngwyn stream on open moorland. It should be noted that the ford is at the beginning of a trackway which crosses the mountain to Penygarreg and the heart of the Elan Valley.

Although scheduled as a Bronze Age standing stone, it is possible that this stone was erected as a marker stone in more recent times that recognised to mark an important short cut from the Rhayader road towards the Elan Valley.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

A sheep scrape to the north side of the stone has created a hollow. The stone leans in that direction and if further weakened it could eventually fall.

Management Recommendations:

Fill the hollow and monitor, in consultation with Cadw and with scheduled monument consent.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

Not archaeologically attested as a standing stone, but scheduled as a Bronze Age monument. Clearly visible

Damaged Ruined Building

2022/2023 Survey Description:

This rectilinear, ruined building was originally recorded as a possible sheep fold; known as Trehesglog Sheepfold I. Field reappraisal in 2022 suggests that the structure may well have originally been a long hut, though it may have been re-used as a sheepfold. The site is obscured by thick reed growth, but strong stone wall bases are still visible. The structure was built on an artificial platform cut into the south-southeast facing slope above the natural lake at Pantyllyn. The wall bases are over 0.3 metres high and seem to represent a building that measured 10 metres in length, north-northwest to south-southeast, by 6 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

The foundations of a rectangular structure are visible on a slope above a marshy area. The structure measured 10 metres by 6 metres and is orientated east to west. Originally interpreted as a sheepfold, it may be a long hut. A similar structure is recorded nearby to the north-northeast.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**
Grid-references are not accurate but the feature appears to be visible on aerial photographs. Clearly identifiable in the field, though somewhat obscured by reeds.

If visited, date of the visit: 05-March-2022 JJH & RPS Trysor

Not Known Complex

2022/2023 Survey Description:

CPAT and CAP have recorded a deserted settlement complex within the area of the Coed y Foel forest block. It includes a large D-shaped enclosure (ID number 472), within which there are records of a smaller, circular enclosure (ID number 441), two rectilinear buildings (ID numbers 383 and 473) and a trackway, which leads into the enclosure (ID number 396). They all form part of deserted settlement ID number 418.

Heritage at Risk 2016 Description:

Described by CAP in 2000 as a hafod complex including two long huts, a D-shaped enclosure within an outer enclosure. Its exact form and location are not apparent from aerial photos due to forestry activity.

Identified Threats:

Threat?: **Yes** **Moderate** **Afforestation**

The feature is not well recorded and now lies in an afforested block

Management Recommendations:

Ensure the complex is not damaged when the trees are harvested. Survey when the opportunity arises.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **Moderate**
Not visible on aerial photographs. Not seen during the 2022 field survey.

Intact Structure

2022/2023 Survey Description:

A brick-built railway bridge which carried the Elan Valley No.4 Railway over the Nant Hsegog stream. It was the only railway bridge built on the line and was constructed with fine blue engineering bricks. In 2022 it was in good condition and still in use for the cycleway along the Elan Valley.

Heritage at Risk 2016 Description:

The site of a former railway bridge

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

There is some damage to the parapet of the bridge being caused by root growth of ivy along the side of the bridge, causing some cracking of the walling and lifting the coping stones.

Management Recommendations:

Monitor. Remove ivy and repair affected parts of the parapet.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**
The site no longer exists. Recorded during field survey

If visited, date of the visit: 28-June-2022 JJH & RPS Trysor

Near Destroyed Complex

2022/2023 Survey Description:

This is the site of the workers houses and barracks which were built when the Penygarreg dam was under construction. The 1901 Census suggests that there were at least 22 separate dwellings and barracks at Penygarreg. Some of these may have been lost when the valley was flooded and some may have been down stream of the dam, where the offices and workshops were also located. However, a group of 5 or 6 large earthwork platforms are found to the west side of the Nant Hesgog stream, just above the point it enters Penygarreg Reservoir. A 1903 postcard of Penygarreg dam as it nears completion shows that wooden houses and barracks buildings did indeed stand on at least some of these platforms. They are not shown on any historic maps, but the 1901 census lists a group of 11 households and barrack-occupants along with Penygarreg farm, indicating that this was indeed the site of the main workers' village here.

Heritage at Risk 2016 Description:

A wooded area within which there are said to be earthwork traces of the huts used by workers during the construction of the Elan reservoirs.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Further survey required

Confidence in Accuracy of Record:

Damaged Complex

2022/2023 Survey Description:

This unusual site includes four small monoliths or standing stones with perhaps four other stones laying flat. It is not clear whether the stones represent the remains of a stone circle, or are merely boundary or marker stones. The place name Bwlch y Ddau-faen (Pass of Two Stones) suggests that at least two of the stones have been recognised for some centuries. The site lies on a parish and medieval commote boundary and an important cross-mountain trackway also runs through the pass here. The largest stone stands up to 0.9 metres high and it is evident that the four erect stones are likely to have been deliberately erected. Despite a survey by CPAT in 2011 and a site visit by Trysor in 2022, it is still not clear what the purpose of the stones may be, although Trysor concur with CPAT that the site is not that of a stone circle. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

This unusual site includes four small monoliths or standing stones with perhaps four other stones laying flat. Damaged Ruined Building

2022/2023 Survey Description:

A drystone structure on a platform, which shows evidence of coursed walling surviving on its northern side. The wall bases stand up to 0.60 metres high internally and define a building measuring 8 metres long, east to west, by 5 metres wide. Originally recorded as a sheepfold and named as Trehesglog Sheepfold II, field reappraisal in 2022 suggests that it is in fact a long hut. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture and was largely obscured by reeds.

Heritage at Risk 2016 Description:

The foundations of a rectangular structure are visible on a slope above a marshy area. The structure measured 10 metres by 6 metres and is orientated east to west. Originally interpreted as a sheepfold, it may be a long hut. A similar structure is recorded nearby to the north-northeast.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **Hogh**
Grid-references are not accurate but the feature appears to be visible on aerial photographs. Clearly identifiable, despite reed growth over the site.

Restored Building

2022/2023 Survey Description:

This cottage appears on late 19th century Ordnance Survey maps and is believed to have been built circa 1880. It is a stone-built house with brick surrounding the door and window openings, with a slate roof. The RCAHMW have recorded than an earlier house, dating to circa 1800 still stood nearby in 1989, but this latter building is now not recognisable.

Heritage at Risk 2016 Description:

A farmhouse dating to the second half of the 19th century, shown on the 1st edition 1:10560 Ordnance Survey maps c.1880. It is stone built but has brick detail above its doors and windows.

Damaged Ruined Building

2022/2023 Survey Description:

A ruined, roofless, stone-built farmhouse which formed the northern end of the the house and byre arrangement at the post-medieval farmstead of Ty'n y Ffald. An examination of the ruins of the building show that it is possible that the byre (ID number 299) is an earlier structure and the house was added to it later, with an internal wall then inserted to divide it into two roughly equal parts. The house measures approximately 10 metres long, north to south, by 6 metres wide. The walls are of stone build with clay bonding. The eastern wall has a central doorway flanked by a window open each side. The chimney was in the north gable wall, where a datestone bearing the date 1839 was noted by CAP in 2002. CAP also recorded that the windows were arched, but the tops of the windows had been lost by the time Trysor visited the site in 2022. The house survived in good condition into the late 19th century and was for several years used by workers employed on the Elan Valley dams scheme. It was abandoned after the scheme was completed and fell into ruin thereafter. The RCAHMW undertook a Level 3 building survey of the building in 1989.

Heritage at Risk 2016 Description:

A ruined farmhouse, with an 1839 datestone. The house is attached to an earlier byre.

Identified Threats:

Threat?: **Yes** **Moderate** **Tree Growth**

Mature trees have already fallen across the ruined house and more trees are growing on the site.

Management Recommendations:

Monitor. Tree management and the removal of fallen trees would help preserve the ruins. NB PRN110350 is a record for a Longhouse. This is not a Longhouse.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Verified during field survey

Not Known Documentary Evidence

2022/2023 Survey Description:

CPAT and CAP have both recorded a circular enclosure within the larger Enclosure ID number 472 on Coed y Foel. The precise location of the circular enclosure is not clear and the original grid reference put the feature outside the larger enclosure. CPAT described the circular enclosure as being to the northwest corner of the larger enclosure. It had a low, earthwork bank and silted outer ditch, measuring about 20 metres in diameter internally, with a possible entrance to the west side, LiDAR data suggests that it may be closer to the centre of the larger enclosure however. Within the circular enclosure, two rectangular buildings are also recorded ID numbers 383 & 473.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Afforestation**

This feature lies within a forest block and has not been accurately plotted in the archaeological record.

Management Recommendations:

Ensure the feature is located and not damaged when the trees are harvested. Survey when the opportunity arises.

Confidence in Accuracy of Record:

Confidence Before Survey?: Low Not visible on aerial photographs. CPAT saw it in 2009 and thought it wasn't an enclosure, but rather a redundant boundary bank.	Confidence After Survey?: Moderate Not visited during the 2022 field survey.

Damaged Earthwork

2022/2023 Survey Description:

A denuded and generally straight earthwork boundary bank which runs for 1100 metres from the Nant Methan to the north at SN8999465488. It runs south-southwest across the higher ground west of the Cwm Elan Lead Mine for 570 metres, before turning at SN8968665012 and continuing south-southeast for probably another 530 metres and ending where it joins another field bank at SN8990864529.

Two mine leats which are of 19th century date and run parallel to the Nant Methan cut through the bank. Also, a boundary wall (ID number 305), which is shown as the boundary of the common on the 1840 parish tithe map, cuts over bank ID number 444, indicating that it must predate the mid-19th century.

Converted Building

2022/2023 Survey Description:

Ty'n y Llidiart is a post-medieval farmhouse which in modern times has been converted for use as a holiday let. The house was described by architect and historian Stephen W. Williams in 1898 as being in a poor condition and he recommended that the Birmingham Corporation invested in repairing and modernising the building. This appears to have been done as the house has survived to the present day. The house is thought to date to around 1780.

Heritage at Risk 2016 Description:

A farmhouse thought to date to about 1780. The house remains occupied.

Identified Threats:

Threat?: **No**

Management Recommendations:

Working farmsteads and other buildings were not included in the 2022 Trysor survey. Elan estate farm complexes and cottages would justify a dedicated building record survey in future.

Damaged Structure

2022/2023 Survey Description:

A stone cairn which may have suffered some disturbance, as there is a slight hollow to its centre. It measures 5.5 metres west-southwest to east-northeast by 4 metres and stands up to 0.4 metres high. The cairn is made up of moderately large stones. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A damaged cairn, measuring 7 metres in diameter by 0.4 metres high.

Identified Threats:

Threat?: **Yes** **High** **Scrub Growth**

Molinia growth is now at risk of burying and damaging the monument through root action.

Management Recommendations:

The Molinia needs to be cleared from this monument, not using heavy agricultural machinery however. This cairn appears to be located outside the defined scheduled area. This needs checking.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

There are several different grid references provided for this cairn, none of which are within the scheduled area. Verified during field survey

Near Intact Structure

2022/2023 Survey Description:

A Bronze Age Stone Alignment on a level area on Rhos y Gelynnen which has almost a broad, shallow saddle with the land rising to the west and to the east, but falling away to the south. The stone row now consists of three upright and two recumbent stones. The first stone to the east is a large, recumbent stone, which measures 1.89 metres long by 0.86 metres wide and 0.25 metres thick. The second stone from the east is the tallest upright stone, measuring 1.5 metres high by 0.63 metres by 0.37 metres. The middle stone is a recumbent boulder, which measures 1 metre long by 0.5 metres wide by 0.37 metres thick. The fourth stone is a small upright stone, 0.63 metres high, by 0.66 metres by 0.2 metres. The western stone is another small upright stone, 0.6 metres high, by 0.47 metres by 0.20 metres. Overall the stone row is 9.5 metres in length, east to west.

Heritage at Risk 2016 Description:

A Stone Row comprising three upright monoliths and two or three fallen monoliths. The largest standing stone is 1.6 metres high.

Identified Threats:

Threat?: **Yes**

Natural Decay

This Stone Row is one a trackway, passed by walkers, with sheep and cattle grazing the hill. The stones could be further knocked or moved over time.

Management Recommendations:

Monitor. Consider managing vegetation growth around the stones.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High**

Confidence After Survey?: **High**

Period: **Post Medieval** Former Period?: Post Medieval
OS NGR: **SN9114863401** Previous OS NGR?: SN91346322
291148,263401 345 metres AOD

Scheduled?: Listed?:
NPRN?: 261669 CPAT HER Record?: 110340

Not Known Documentary Evidence

2022/2023 Survey Description:

Originally recorded as a "house" site in Coed Aber Elan by CAP in 2000. However, the CAP record had a grid-reference (SN91346322) which placed the site in Coed Gelynen. There is no evidence of a building at that location.

Further investigation suggests that the ruined building recorded by CAP is indeed in Coed Aber Elan at SN9114863401. A rectilinear structure is shown at this location on the 1888 and 1905 1:10560 Ordnance Survey maps. It may also be shown on the 1833 First Series Ordnance Survey map, which shows a building east of Llanerchi, from where a track ran back to the valley floor to the west. The building isn't shown on the 1840 parish tithe map and was therefore presumably abandoned during the 1830s.

CAP recorded that the building measured 10 metres long, north to south, by 5 metres wide, with walls up to 1.5 metres high and 0.5 metres wide. The north corner was most evident, and an entrance on the east side.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Afforestation**

This structure is in an afforested area and future forestry operations may threaten it

Management Recommendations:

Visit and record. Avoid damage during forestry operation.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

There is no building shown here on historic OS maps or the parish tithe map. Suspect that the grid reference is wrong as this location is in Coed y Gelynnen, not Coed Aber Elan.

Confidence After Survey?: **Moderate**

Not seen during the 2022 field survey due to incorrect grid-reference. Seen on historic mapping and Lidar.

If visited, date of the visit:

Intact Structure

2022/2023 Survey Description:

This stone marker cairn which measures 1.5 metres in diameter by 1 metre high. It has been built onto a summit outcrop. It incorporates two parts of a broken Elan estate concrete boundary post, which must have been added post-1913, when the posts were erected. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Damaged Earthwork

2022/2023 Survey Description:

A D-shaped enclosure defined by a relict boundary bank. The enclosure measures about 115 metres long north-northwest to south-southeast, by 95 metres wide. A natural outcrop forms the west-southwest side of the enclosure, forming the straight side of the "D".

Within this enclosure, there are records of a smaller, circular enclosure (ID number 441), two rectilinear buildings (ID numbers 383 and 473) and a trackway, which leads into the enclosure (ID number 396). They all form part of deserted settlement ID number 418.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Afforestation**

The feature is not well recorded and now lies in an afforested block

Management Recommendations:

Ensure the enclosure is not damaged when the trees are harvested. Survey when the opportunity arises.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **Moderate**
Possibly visible on aerial photographs. Not seen during the 2022 field survey.

Not Known Earthwork

2022/2023 Survey Description:

CPAT and CAP have previously documented that there were two buildings within a small enclosure ID number 441 on Coed y Foel. This building was said by CPAT to be an outbuilding to Long Hut ID number 383, measuring 4 metres long by 2 metres wide.

Its exact location has not been accurately plotted and the original grid references put it to the east of the enclosure. It is known that Enclosure ID number 441 was within a larger Enclosure ID number 472, which is to the middle of Y Foel hill.

Heritage at Risk 2016 Description:

Described by CAP in 2000 as the outline of a building measuring 8 metres east to west by 5 metres, the walls being of stone construction, with the interior of the building filled with stone rubble. CPAT record that a settlement is shown here on a map dating to 1793.

Identified Threats:

Threat?: **Yes** **Moderate** **Afforestation**

The feature is not well recorded and now lies in an afforested block

Management Recommendations:

Ensure the feature is located and is not damaged when the trees are harvested. Survey when the opportunity arises.

Damaged Structure

2022/2023 Survey Description:

An old boundary bank which begins in the south at SN9197262048, to the north of the Nant y Postau stream, then runs northeast over a rocky local summit, before turning north and ending at SN9222562448, where it meets another boundary bank (ID number 368). The southern and northern ends of the boundary are earth and stone banks, but the central section, where it crosses the rocky summit, is characterised by a rough stone bank. A gap in the line of the boundary at SN9203462079 seems to have been a deliberately created gateway allowing access to the hill pasture to the southeast. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Damaged Earthwork

2022/2023 Survey Description:

Originally recorded as a drainage ditch with an earthwork bank by CAP in 2000, this linear feature is actually an earthwork boundary bank and ditch shown on the 1820 Ordnance Survey Original Surveyors Drawings. It formed the common boundary in the 19th century, detaching Moelfryn from the open common to the southeast. Longhouse Id number 476 sits within the area enclosed by the boundary, which may indicate that this is an early post-medieval attempt to enclose part of the common. The boundary runs for 685 metres from SN9106161271 in the southwest to SN9136161802 to the north. It is partly disturbed by a modern trackway towards the north end.

Damaged Building

2022/2023 Survey Description:

An early 20th century red-brick house, which was built alongside the former Manager's House at Cwm Elan Lead Mine by the Birmingham Corporation by 1901 and initially houses workers on the dam scheme. It was built as a replacement house for Bryn Iago, in the Claerwen valley, which was demolished to make way for a proposed new dam at Ciloerwynt, which was never constructed. This cottage was poorly built and apart from its initial use as a barracks and later to house an estate gamekeeper, was never lived in permanently.

Heritage at Risk 2016 Description:

A red-bricked cottage built in the 1890s by the Birmingham Corporation for workers engaged in the construction of the Elan Valley reservoirs. The building is now derelict, but still has its slate roof and has its doors and windows boarded up.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This house has been empty for many years and is semi-derelict

Management Recommendations:

Monitor and maintain

Near Intact Earthwork

2022/2023 Survey Description:

An earthwork bank which runs north to south for about 40 metres. At its northern end it seems to turn east for almost another 40 metres and have a ditch along its northern side. There may also be a third bank forming the south side of the enclosure. The eastern side appears to have been disturbed by a later linear feature cut from the northwest, which appears to be a leat (ID number 5136). It may be the remains of an enclosure predating sheep fold ID number 336, or perhaps a drainage feature intended to divert water around the hollow in which the sheep fold is situated, to the east of the banks.

Damaged Structure

2022/2023 Survey Description:

This site consists of a flat, triangular "capstone" about 0.75 metres long, which rests on an upright slab measuring 1 metre long and up to 0.5 metres high. This upright slab forms the southern side of a small space beneath the capstone. To the northern side the capstone seems to run into the ground. Another stone slab seems to form the floor of the cist and other smaller stones are present to the east side or entrance of the cist. This feature has been recorded as a prehistoric chambered tomb but CPAT on 2002 have suggested it is a natural feature exposed by animal erosion. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture and the vegetation cover was grass.

Heritage at Risk 2016 Description:

Originally recorded 2000 as a Neolithic chambered tomb by CAP, it has been dismissed by CPAT in 2002 as a natural feature.

Identified Threats:

Threat?: **Yes**

Clearance

The feature lies alongside a trackway popular with walkers and mountain bikers and could be disturbed.

Management Recommendations:

Monitor for disturbance or erosion caused by walkers and bikers.

Near Intact Structure

2022/2023 Survey Description:

A 20th century sheep wash, created by a low, concrete dam built across the Nant Gwynllyn, with a central sluice gate mechanism still in position on the watercourse. The sluice gate was missing when it was recorded in 2022. The dam runs north to south for some 25 metres and, with the sluice gate closed, would have created a large pool upstream to the west. The sheep wash was accessed via a trackway into the stream from the northwest. This trackway and dam do not appear on any historic mapping and appear to be post-1950 in date. It was visited by Trysor in 2022 as part of the NLHF funded Elan Links project.

Heritage at Risk 2016 Description:

A dam with a sluice gate which appears to have been constructed in the 20th century to create a sheep washing pool on the Nant Gwynllyn.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

The Nant Gwynllyn stream will gradually erode the dam and sluice away.

Management Recommendations:

Not Known Documentary Evidence

2022/2023 Survey Description:

A gin is shown in this area on the 1847 parish tithe map, associated with the Nant y Car mine. The location of the gin has not been identified by modern surveys and no field evidence was noted in 2022 to help resolve the matter. However, it seems possible that the gin was used to raise or at the site of a former shaft (ID number 3307) which can still be seen at the trackway at SN8908761858. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

The grid-reference is incorrect and the gin was further to the east, near former mine buildings.

Confidence After Survey?: **Low**

Not found during field survey, but its existence is attested by tithe map evidence.

If visited, date of the visit: 16-June-2022 JJH & RPS Trysor

Damaged Earthwork

2022/2023 Survey Description:

Recorded as an earthwork bank running parallel to the mine leat PRN18451, which itself runs from the Nant Methan stream, through the lead mine complex and proceeds down the valley to the southeast. The bank and leat is evident to the southeast of the main area of the mine, where it crosses a boggy area before reaching the coniferous Henfron Plantation.

The bank may have been created when the leat was cut and to have survived as a relict feature after the leat was abandoned. The leat appears to underly some 19th century linear features within the mine complex and could be an 18th or early 19th century feature. By the mid-19th century the line of the leat corresponds with a field boundary shown on the parish tithe map of 1840, suggesting it had been retained as a boundary feature.

Heritage at Risk 2016 Description:

An earthwork bank recorded by CAP in 2000 within the Cwm Elan mine complex, but apparently given an inaccurate grid reference.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: None	Confidence After Survey?: High
The grid reference is inaccurate as the leat PRN18451 is further to the northeast. It is not known which bank this record refers to.	Recorded during field survey

Damaged Ruined Building

2022/2023 Survey Description:

The ruined site of a 19th century cottage. Pant y Cerdin appears on the 1833 Ordnance Survey First Series Map (Sheet 56) but is not shown on the parish tithe map of 1840. It again appears as an occupied property on the 1888 1:10560 Ordnance Survey map, but had been abandoned by the time of the 1905 edition of the Ordnance Survey map. It now survives as a roofless, single-storey ruin, measuring 10 metres long east to west, by 5 metres wide. The cottages faced south, and there is a doorway with a window to either side in the eastern side of the south wall. There is a window through the east part of the north wall and another window in the west-facing gable. Internally, it was divided into two parts by a north to south wall. The walls stood to wallplate level when it was visited in 2022.

Heritage at Risk 2016 Description:

A ruined cottage of probable 19th century date, set within a small field system carved out of the commons on Glog Fawr. The ruin measures 10 metres by 5 metres with wall standing over 2 metres high at the top of the gable end. It does not appear of the parish tithe map of 1840.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Damaged Ruined Building

2022/2023 Survey Description:

A ruined upland shepherding cottage which measures 7 metres long, north-northeast to south-southwest by 5 metres wide. The walls are built of roughly-coursed stone with clay bonding and rough quoins. There is some evidence of the base of the chimney at the north end of the building. There is a trackway leading to the cottage from the east and an enclosure . When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

A small, ruined, drystone cottage of uncertain origin. It has been a ruin since at least the early 20th century. The term "Lluest" usually signifies a shepherding station of early post-medieval origin, but this building is not shown on either the 1820 Ordnance Survey Original Surveyors Drawings, nor on the 1841 parish tithe map for Llansantffraid Cwmdeuddwr. Either it was already abandoned by 1820 or it post-dates the tithe map. The cottage is shown on the 1890 1:10560 scale Ordnance Survey map, but it is not clear if it was occupied or a ruin at that time.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This ruined structure will continue to decay

Intact Structure

2022/2023 Survey Description:

This grassed-over mound measures approximately 15 metres in diameter and up to 1 metre high. A concrete slab or block reportedly seen positioned on top of the mound in the early 21st century is now not visible and has presumably disappeared beneath the grass. It is scheduled as a Bronze Age round barrow, although a number of archaeological surveyors, including CPAT and Trysor have expressed uncertainty as to whether it is an antiquity natural feature. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

This appears to be a natural mound, but it has been scheduled as a Bronze Age Round Barrow. The mound is rather irregular in plan and measures up to 15 metres in diameter and is up to 2 metres high.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. Future evaluation may be required to settle the true character of this feature.

Confidence in Accuracy of Record:

Confidence Before Survey?: High Verified in the field.	Confidence After Survey?: Moderate This is a scheduled barrow, but some doubt exists as to whether it is a natural feature.

Near Destroyed Earthwork

2022/2023 Survey Description:

A large building within the Llanerch Lleyrn farmstead complex. It measures 26 metres long, north-northwest to south-southeast, by 5 metres wide and is subdivided into 4 sections. This is thought to represent the site of the farmhouse with an attached byre or outbuildings. The house has fallen into complete ruin and has been reduced to rubble covered wall bases. This long farm building range is not shown on the 1840 parish tithe map, which shows a smaller building close to the same position. The building range is shown on the Ordnance Survey's 1888 1:10560 map.

Heritage at Risk 2016 Description:

The slight ruins of this post medieval farmhouse can still be seen today, but the house has been reduced to wall bases now, apart from the south gable wall which still stands to 3 or 4 metres in height.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor

Near Intact Structure

2022/2023 Survey Description:

A rectilinear enclosure to the south side of Pant y Cerdin cottage, which measures about 20 metres by 20 metres. It may have been the garden of the cottage, from which it is separated by a narrow path. It has a neatly constructed north enclosure bank, which is faced along its northern side by large, edge-set stone slabs. It is one of several small attached enclosures or fields which are associated with the cottage and are shown on 19th century maps (ID number 5109).

Damaged Ruined Building

2022/2023 Survey Description:

The 1905 1:10560 Ordnance Survey map shows Pant y Cerdin as a deserted cottage. It appears to show a square outbuilding built against the eastern gable wall of the cottage, measuring at most 4 metres square. This outbuilding is not present on the 1888 edition of the 1:10560 map and may have been added in the late 19th century. It is now represented by the foundation of a drystone wall along its eastern wide and was hidden in bracken when visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture.

Intact Earthwork

2022/2023 Survey Description:

A prospecting pit which is likely to be associated with the search for new mineral deposits carried out by the mines of the Rhiwnant valley during the 19th century, Prospectors would have been drawn to this location, Cerrig Plwm, due to the presence of quartz veins outcropping in the area. Cerrig Plwm translates as "Lead Rocks", which also gives some indication of its perceived interest to metal miners. The trench consists of two adjacent pits, with spoil cast downslope to the east. Overall it measures about 10 metres, north to south, by 3 metres wide. Quartz is visible within and around the pits. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass and molinia

Near Intact Structure

2022/2023 Survey Description:

A drystone sheepfold, consisting of two cells, with a shedding wall running off its southern side. It is located on a natural terrace above the west side of the Rhiwnant stream. The western cell is the largest and measures about 10 metres, east-northeast to west-northwest, by 9 metres wide. There are access points into the eastern cell and to the outside through the eastern wall of this cell. The eastern cell is much smaller, measuring about 6.5 metres long east-northeast to west-northwest, by 4.5 metres wide. The shedding wall runs south-southeast from the south side of the eastern cell for about 10 metres. The remains of post and wire fencing surrounding the fold indicate that it has been in use in modern times for gathering sheep. The walls of the fold are mostly intact and measure up to 1.25 metres high by up to 0.75 metres wide.

Heritage at Risk 2016 Description:

A drystone sheepfold, built of drystone walling, with some post and wire fencing.

Identified Threats:

Threat?: Yes	Moderate	Scrub Growth
Bracken has grown over the whole site		

Management Recommendations:

Not Known Earthwork

2022/2023 Survey Description:

In 2003, CAP recorded a line of three "platforms" along the eastern side of the stream here. The site was visited by Trysor in 2022 as part of the NHF funded Elan Links scheme but could not be examined in detail as grazing animals were on the site and it was decided not to disturb them. There are certainly earthworks at the site, but their character and purpose is not clear. Aerial photographs and LiDAR do not show sufficient detail to assist.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Revisit

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**
Probably clearance feature, or
natural stone pile.

Confidence After Survey?: **Low**
Not examined fully in the field and not
clear on Lidar or aerial photographs

Damaged Structure

2022/2023 Survey Description:

A crudely-built drystone shelter, located within a band of rough scree to the north of the Rhiwnant valley. The structure was recorded by CPAT as a rectangular shelter in 1994, but no measurements were provided. It was not found by CAP in 2000, nor by Trysor in 2022, but the original grid-reference was incorrect. LiDAR shows a feature which appears to match this shelter at the grid-reference SN8806361102, which also matches a ground photograph taken by CPAT in 1994 but incorrectly assigned to PRN16593, a different shelter (photograph number CS94-026-025). Based on the photograph, the shelter is aligned north-northeast to south-southwest and is about 4 metres long by 2.5 metres wide.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

Revisit, record more accurately.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**
Not visible on aerial photographs.

Confidence After Survey?: **Moderate**
Not found in 2022 but location verified by Lidar and a ground photo

Damaged Structure

2022/2023 Survey Description:

This feature is shown on the Second Edition 1:10560 Ordnance Survey map of 1905 and has been misidentified previously as a hut. It was in fact a small, square, fenced enclosure created after the completion of construction on the Craig Goch dam and planted with Scots Pines. In 2022 the pines still stand, though the enclosing boundary fence no longer exists.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

Management Recommendations:

Manage pines, replace dead or fallen trees with new Scots Pines and reinstate the fence to protect the trees from grazing animals.

Damaged Structure

2022/2023 Survey Description:

A small drystone structure, measuring 5 metres long southeast to northwest, by 4 metres wide. Its walls stand up to about 0.7 metres high and it has an entrance at its northeast side. It is located on a natural terrace overlooking the Afon Arban to the south, close to the Nant y Gath stream. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture and the vegetation cover was bracken.

Heritage at Risk 2016 Description:

A small drystone structure, measuring 5 metres by 4 metres, and defined by low walling. It appears that a longer, earlier foundation underlies this, and that this is a long hut which has undergone some later reuse as a shelter.

Scheduled?: Listed?:
NPRN?: 277004 CPAT HER Record?: 5513

Damaged Complex

2022/2023 Survey Description:

The Nant y Car mine operated between 1844 and 1883, mining lead and copper. Remains of the workings have survived to the present day, including some structures, shafts and spoil tips. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Nant y Car (North) was a lead mine which operated between 1844 and 1883. It is likely that there was some small scale activity on the site prior to this. The site is now derelict and several mine shafts, spoil tips, trial workings and fragmentary buildings and structures can be seen running down the hill across an area of about 400 metres by 100 metres. On the higher slopes, to the south, are the shafts and tips, with the processing area at the northern end, close to the south bank of the Claerwen river.

Identified Threats:

Threat?: **No**

Damaged Structure

2022/2023 Survey Description:

A rectilinear, drystone building in a ruinous condition on a terrace to the north side of the Nant yr Iau stream recorded by CAP in 2003. It measures 15 metres northeast to southwest by 6 metres wide and has two cells. Its southeastern lateral wall has been eroded away by past river action, though the river had changed course slightly by 2022 to flow further to the southeast. It was revisited by Trysor in 2022 as part of the NLHF funded Elan Links project.

Heritage at Risk 2016 Description:

This appears to be a ruined longhouse or long hut, measuring c.15 metres long, east-northeast to west-southwest, by 6 metres wide. It seems to have two cells.

Damaged Earthwork

2022/2023 Survey Description:

This feature was originally recorded as a stone pile. It is a low, grassy mound, with quartz stones protruding through the grass. It is thought likely that it represents a Bronze Age funerary cairn, measuring approximately 4 metres in diameter and up to 0.3 metres high. At some point, it would appear that the mound was disturbed. This may have been the result of prospecting activity by the lead mines along the Rhiwnant valley searching for new ore veins in the surrounding landscape and being drawn to the quartz exposed in the cairn mound. A series of shallow hollows (ID number 5078) around the mound are evidence of this activity.

Heritage at Risk 2016 Description:

A stone pile or possible cairn, composed of white quartz and said to be 4 metres in diameter and 0.30 metres high.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. Potentially evaluate with a view to future scheduling if it is a cairn

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **Moderate**
Not visible on aerial photographs. Recorded during field survey

Damaged Earthwork

2022/2023 Survey Description:

The remains of a drystone building, now reduced to wall bases, are found on a high, natural terrace to the south of the Afon Arban, from where there are good views northeastwards towards the Claerwen valley in the area of the modern Claerwen Dam. The building appears to have been a multi-celled longhouse, although it may be a post-medieval cottage with an attached byre. Overall the structure measures 25 metres northeast to southwest, and 6 metres wide. The wall bases are well-built with coursed slabs and measure 1 metre wide by 0.4 metres high. The building is divided into three principal cells, of approximately equal size, though there may have been some further partitioning of the northeast and southwest cells. When it was recorded by Trysor in 2022 as part of the NLHF funded Elan Links project, the area was used for rough pasture.

Heritage at Risk 2016 Description:

A large longhouse, measuring about 25 metres northeast to southwest by 6 metres wide.

NPRN?: 277145 CPAT HER Record?: 165121

Near Intact Earthwork

2022/2023 Survey Description:

A former mine leat, associated with the Nant y Garw Lead Mine. It runs from a now ruined dam, ID number 523, at its northwest end at SN8723860796, for some 140 metres to the site of an apparent dammed water tank or reservoir, ID number 5045, at SN8736260720. The leat survives as a 1.25 metre wide linear earthwork gully, with a bank of similar width and up to 0.6 metres high running parallel to its southern or downslope side. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture.

Heritage at Risk 2016 Description:

Damaged Earthwork

2022/2023 Survey Description:

A long leat constructed in the later 19th century to carry water to the Nant y Garw Lead Mine. It runs for approximately 1.4 kilometres and appears to start at SN8634861167, taking water from the Nant y Corddi, a tributary stream of the Nant y Garw. At its eastern end it feeds into a natural rill above and just south-southwest of the Nant y Garw Lead Mine. Water could then flow naturally down the rill into the Nant y Garw stream, just upstream from the mine site and then be used to power the waterwheels at the mine.

Damaged Structure

2022/2023 Survey Description:

A rectangular long hut which was recorded as Nant y Wern, Sheep Fold I by CAP in 2004. The long hut measures 11.5 metres long, west-southwest to east-northeast, by 5 metres wide overall. It is defined by low wall bases, which are covered by bracken. Internally, there are two cells, the eastern cell being the largest, though bracken cover made interpretation difficult. To the east-northeast end of the long hut there is another cell which was possibly an external shelter associated with the long hut. If it is attached to the building it would extend its overall length to 14 metres. When visited in 2023 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was bracken and moss.

Heritage at Risk 2016 Description:

A possible long hut, measuring over 14 metres east-northeast to west-southwest by 5.5 metres wide. It is shown as a sheep fold on historic Ordnance Survey maps.

Identified Threats:

Threat?: **Yes** **Moderate** **Trees**

Trees are planted very close to the site.

Management Recommendations:

Remove trees within 5 metres of the long hut.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**
Shown on historic maps. Recorded during field survey

Damaged Earthwork

2022/2023 Survey Description:

This earthwork monument may either represent an oval enclosure of unknown date or, possibly a Bronze Age Ring Cairn. It measures approximately 14 metres in length, northwest to southeast, by 10.7 metres wide. A possible entrance was noted by CPAT on the southwest side but not seen by Trysor in 2022 when the site was under short grass. A smaller circular feature (ID number 5012), inside the southeast end of the enclosure may be a hut circle or a round cairn.

Heritage at Risk 2016 Description:

A low earthwork feature, interpreted as a possible hut circle, measuring 13 metres north to south by 11 metres, and up to 0.30 metres high.

Near Destroyed Ruined Building

2022/2023 Survey Description:

The site of a very ruinous stone building. It appears to measure approximately 4 metres by 4 metres and corresponds to a small, square building shown on the 1847 tithe map and the 1888 1:10560 Ordnance Survey map, the latter naming it as Penygwaith, which was a cottage occupied into the early 20th century. No buildings are shown here on the 1820 Ordnance Survey Original Surveyors Drawings. The cottage would have been founded after 1844 when Nant y Car mine was opened here. It is not clear whether this small building was the cottage or if the cottage was located within a longer building 40 metres upslope to the southwest (ID number 3304). When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

The grid reference appears to be incorrect but to refer to the nearby site of a building shown on late 19th and early 20th century Ordnance Survey maps and labelled as "Pen y Gwaith". It seems to have been associated with the lead mine. This building does not appear on the 1849 parish tithe map and was abandoned during the earlier 20th century. It may have been a cottage or mine building.

Verified during field survey

Damaged Ruined Building

2022/2023 Survey Description:

The ruined site of the farmhouse at Nant y Car. The building was deliberately demolished in the early 1900s due to the requirements of the Elan reservoirs scheme. The house formed the western side of an L-shaped arrangement, with a barn or byre (ID number 645) running off its southern end at right angles to its eastern side. The farmhouse is now defined only by the stone wall bases of the building, which give the footprint measuring about 14 metres north-northwest to south-southeast by 6.5 metres wide. There was a small extension to the west side of the north end of the house, presumably a lean-to outshut, which was sunk into the surface. The outline of the outshut is still visible and measures 7 metres long north-northwest to east-southeast by 3 metres wide. A photograph of the farm taken circa 1900 indicates that a similar outshut was also present against the northern gable wall of the house, where there is now a pile of stone.

Damaged Ruined Building

2022/2023 Survey Description:

The site of an abandoned farmstead. Nant y Car is likely to have been pre-19th century in origin. It was occupied throughout the 19th century and is shown on the parish tithe map and the 1888 1:10560 Ordnance Survey map as a house (ID number 636) with an attached barn or byre (ID number 645) in an L-shaped arrangement, with a separate outbuilding (ID number 646) across the other side of the farmyard to the north. The farm was abandoned and demolished in the early 20th century in advance of the proposed Dolymynach Reservoir, even though it would have remained well above the level of the reservoir. The reservoir was never created and the loss of the farm proved unnecessary. Only the ruined wallbases of the buildings now survive, other than the eastern bay of the barn attached to the house, which appears to have remained in use as a field barn for some time. It is now roofless however and falling into ruin.

Heritage at Risk 2016 Description:

This farmstead stood to the south of the Claerwen river in a sheltered position close to the river's edge. It fell out of use in became ruined in the 20th century.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Damaged Ruined Building

2022/2023 Survey Description:

This byre or barn was attached to the east side of the southern end of the farmhouse at Nant y Car. It was partially demolished, along with the house, in the early 20th century. Only the eastern end of the building was retained, presumably for use as a field barn. The western half of the building survives only as stone wall bases, whilst the walls of the eastern end still stand to wallplate level. The western gable was still partially intact to ridge height in 2022. Photographs of the farmstead when still in use show that the eastern gable wall was stone-built to wallplate level, with timber used above. There was an entrance through the north side, opening onto the farmyard. There is some evidence that there may have been a doorway through the south wall at the eastern end of the building also, but it had been blocked up. The building, overall, measured about 14 metres long, east-northeast to west-southwest, by 6 metres wide. The eastern bay still stands at 8 metres long by 6 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture with trees growing in adm around it.

Heritage at Risk 2016 Description:

The ruined farmhouse of Nant y Car farm. It measures about 8 metres long by 5 metres wide and walls still stood to 2m high in 2004. The farm is shown on the 1849 parish tithe map.

Damaged Ruined Building

2022/2023 Survey Description:

A ruined farm outbuilding, which was at the northern side of the farmyard at Nant y Car, facing southwards across the yard. It was separate from the L-shaped house and byre range. The building was demolished in the early 20th century when the farmstead was abandoned and now only survives as ruined wall bases, revetted into the slope along its northern side. The building measured 10 metres long, east-northeast to west-southwest, by 5 metres wide.

Heritage at Risk 2016 Description:

A large outbuilding on Nant y Car farm, which was badly ruined by 2004. It measures 10 metres by 5 metres and the walls now stand up to just 1 metre high.

Damaged Structure

2022/2023 Survey Description:

This drystone sheep fold measures 12 metres long, east to west, by 5 metres wide. The stone walls stand up to 1.25 metres high and are up to 0.40 metres thick. The southern and eastern ends are revetted into the slope. There is an extension wall which runs north for 10 metres from the western end of the fold, curving slightly to the north-northeast. This wall would have helped guide sheep into the entrance at the northwest corner of the fold. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A drystone sheepfold measuring 12 metres, east to west, by 5 metres wide. The walls still stand up to 1.25 metres high and the fold has been in occasional use into modern times.

Identified Threats:

Threat?: **No**

Management Recommendations:

Damaged Structure

2022/2023 Survey Description:

A sheep fold recorded at this location in the National Monuments Record (NPRN 261796) was not found at the given grid reference by Trysor in 2022. The structure was described as being a small, walled enclosure, with its south and east walls crumbling, the walls being 0.3 metres wide and up to 1.3 metres wide. This description does not conform with an existing sheep fold recorded immediately to the southeast as NPRN 261797. However, it seems likely that two NPRNs were erroneously awarded to the same sheep fold.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

The grid reference may be inaccurate and the description is not helpful. Nothing is visible at the given location on aerial photography.

Confidence After Survey?: **None**

Not found in the field. This seems to be a duplicate record or erroneous grid reference.

2022/2023 Survey Description:

An old trackway is visible on aerial photographs and LiDAR running downslope to the western side of the Nant y Car stream on a north-northeast to south-southwest alignment for close to 200 metres. At its southern end it may turn to the west. It can be followed in a series of separate, short sections to the edge of the enclosed fields at its northern end but then seems to disappear.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**
Visible on aerial photographs.

Confidence After Survey?: **High**

Intact Complex

2022/2023 Survey Description:

A working farmstead in the Claerwen valley.

Heritage at Risk 2016 Description:

Set on the slopes at the southern side of the Claerwen valley, this post medieval farmstead continues to be a working farm to the present day. The farm is shown on the parish tithe map of 1849. The buildings shown in 1849 have been replaced or new buildings added to create the present complex, which includes a farmhouse built in the late 19th or early 20th centuries.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads and cottages in use were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Not included in the 2022 survey

2022/2023 Survey Description:

A 20th century sheep dip to the north side of the Nant y Wern stream. It includes the concrete-lined dip, which originally appears to have had a now collapsed corrugated steel shed covering it. Surviving corrugated sheets indicate that this shed had a half-round roof. There are also three adjoining sheep pens, defined by post and wire fencing, which still survived when the site was visited in 2023. To the north side of the pen, some evidence exists of possible earth and stone banks which may indicate that there may have been an earlier enclosure or feature at the site. There is also a straight gully which runs north-northeast from the pens for some 85 metres, which may be some sort of drainage feature. When visited in 2023 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was bracken.

Not Known Earthwork

2022/2023 Survey Description:

Originally recorded in 2004 as a rectangular "hut platform," measuring 3 metres in diameter, this feature may be a denuded Bronze Age barrow or cairn or a naturally occurring stone spread. It consists of a sub-rectangular stone foundation with some stones within its well-defined edge, including a relatively large block towards the centre. The stones appear to have been revealed by either peat cutting or peat erosion.

Heritage at Risk 2016 Description:

Originally described as a medieval hut platform by CAP in 2004, ground photos indicate that this is in fact a small, low cairn, about 3 metres in diameter.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Not Known Documentary Evidence

2022/2023 Survey Description:

In 2004, CAP reported that erosion of the peat near Bwlch y Ddau Faen had exposed the stone foundation of a circular structure, thought to be a hut circle. The site was revisited by Trysor in 2022 but no evidence of this feature could be found at the grid-reference provided. Some stone was visible where peat had eroded across the area, such as at SN8928258318, but nothing which corresponded with the circular foundation noted by CAP.

Heritage at Risk 2016 Description:

A stone structure was seen in 2004, at the base of eroding peat, and interpreted as a circular hut, 3 metres in diameter.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: Low This is a possible stone structure exposed at the base of eroding peat. The grid reference is unlikely to be accurate and it this has not been verified as an archaeological feature.	Confidence After Survey?: Low Not found in 2022

2022/2023 Survey Description:

A quarried linear area, which measures approximately 140 metres north-northwest to south-southeast, by 15 metres wide. It was cut to create a linear cutting to house machinery during the construction of the Claerwen Dam in the mid 20th century. Contemporary photographs show that cranes or pylons from which steel cables were suspended across the valley were positioned within this cutting or at its front edge. The southern end of the quarried out cutting is closed by a rock face with the northern end is open and linked to a trackway leading back down into the valley. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Near Intact Earthwork

2022/2023 Survey Description:

Recorded as a possible terraced area by CAP in 2003, this is a natural terrace. It may have faint traces of cultivation ridges which are 1.2 metres wide running from east-northeast to west-southwest. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Scheduled?: Listed?:
NPRN?: 277181 CPAT HER Record?: 88937

Damaged Earthwork

2022/2023 Survey Description:

This cairn is found in a relatively stony area, but it does appear to be a discrete stone pile and the 2023 LiDAR coverage shows it to be a distinctly circular feature. It measures approximately 4 metres in diameter and is 0.2 metres high. On the ground, it appears to have been disturbed at some point, as there is a hollow at the centre of the cairn and some stone seems to have been cast or slipped downslope to the south. David James of Rhayader noted another possible cairn (Llwydnant Cairn III, 30 metres to the southwest, but Trysor thought this likely to be a natural stone pile when it was examined in 2022). When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Not Applicable Natural Feature

2022/2023 Survey Description:

Recorded in 2001 as a possible boundary stone, measuring 0.5 metres high, 1 metre wide and 1.25 metres wide, this stone was not found in 2022 by Trysor as part of the NLHF funded Elan Links project and its description suggests that it is a natural stone slab rather than a boundary stone. The given location is not on any known boundary.

Heritage at Risk 2016 Description:

A stone slab identified during Upland Survey in 2001 as a possible marker stone. It was recorded as being 0.5 metre high by 1 metre wide and 1.23m long.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **None**
Cannot be corroborated from other sources. Not found in 2022, but probably natural

Damaged Ruined Building

2022/2023 Survey Description:

A disused sheep fold, which is defined by well-preserved, drystone wall bases. The wall bases measure 0.75 metres thick and up to 1 metre high. The building measures 12 metres long, southwest to northeast, by 6 metres wide, with an entrance measuring 0.7 metres wide through the centre of the southeast-facing side. A 6 metre long shedding wall runs east-southeast off the east corner of the building towards the bank of the nearby stream.

Heritage at Risk 2016 Description:

A drystone long hut, measuring 12 metres by 6 metres and now reduced to wall bases. Shown as a "Sheepfold" on historic Ordnance Survey maps, the presence of several small ancillary shelters around the long hut indicate that it was once occupied as a dwelling, probably in the lluest tradition.

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. The nearby stream has not eroded this structure in the past but may do so in the longer term.

Damaged Earthwork

2022/2023 Survey Description:

A ruined rectilinear structure thought to be a long hut, which is shown on 19th century Ordnance Survey maps as a "Sheepfold". It is quite possible that it was a ruined long hut re-used as a sheepfold in later times. The structure survives as a single-celled ruin, now measuring 14 metres long, east northeast to west-northwest, by 6 metres wide. with its stone wall bases spread over 1 metre wide in places and 0.4 metres high. The spreading of the stone rubble increases the length and width of the footprint of the ruin and it is likely that the original structure was closer to 10 metres long by 5 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this it was in an area of rough pasture and vegetation cover was rushes..

Heritage at Risk 2016 Description:

This ruined, drystone long hut measures approximately 14 metres east to west, by 6 metres wide.

Damaged Structure

2022/2023 Survey Description:

An unusual, oval earthwork feature, which may be a sunken shelter. It is an embanked, circular depression. The enclosing bank is of earth and stone on the west, east and south sides and measures 2.2 metres wide and up to 0.6 metres wide. The internal hollow measures 3 metres in diameter. There is an entrance at the north side, which is a characteristic of a sunken shelter. The bank defining the west side also seems to extend to the north to curve around the outside of the entrance, another characteristic of a sunken shelter. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and vegetation cover was reeds and grasses.

Intact Building

2022/2023 Survey Description:

A stone and timber barn associated with Ty'n y Llidiart farm, standing immediately to the south of the farmhouse and thought to date to around 1780. The building consists of a four-bay timber-framed and weather-boarded barn under a slate roof, which has been recorded as having a flagged threshing floor inside. The building measures approximately 15 metres long west-northwest to east-southeast, by 6 metres wide. Attached to its southern side is a single-storey, lean-to extension, built of stone, also with a slate roof. This extension measures approximately 10 metres long by 4 metres wide.

Heritage at Risk 2016 Description:

A former farm barn still roofed and in use at Ty'nllidiart.

Identified Threats:

Threat?: **No**

Management Recommendations:

Working farmsteads and other buildings were not included in the 2022 Trysor survey. Elan estate farm complexes and cottages would justify a dedicated building record survey in future.

Intact Building

2022/2023 Survey Description:

A stone-built barn at Penygarreg Farm, which stands to the south side of the farmyard. A smaller, rectangular building is shown at this position on the parish tithe map, but this may have been replaced by the time of the 1888 1:10560 Ordnance Survey map, which shows the larger, L-shaped structure which was still standing intact and in use in 2022. The main part of the barn has been described as a three-bay barn with a single barn door entrance in its north side. It stands on a east-southeast to west-northwest alignment and measures about 26 metres length by 7 metres wide. At its western end, a smaller extension runs off its northern side, measuring about 6 metres long by 7 metres wide.

Heritage at Risk 2016 Description:

A stone barn on Penygarreg farm.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future.

Intact Building

2022/2023 Survey Description:

A L-shaped, stone-built field barn. The barn is not shown on the 1840 parish tithe map, but is shown on the 1888 1:10560 Ordnance Survey map. It still stands in good condition and remains in use. It has a slate roof. Internally the eastern wing of the building is said to be a cowhouse, with three doors in its west-facing wall. The west wing is said to be a three-bay barn, with a large door in its north-facing wall. It was not visited in 2022 as part of the NLHF funded Elan Links project.

Heritage at Risk 2016 Description:

An L shaped, stone-built farm range incorporating a three bay barn and a cowhouse.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

Working farmsteads were not included in the 2022 Trysor survey. Elan estate farm complexes would justify a dedicated building record survey in future. This building is a field barn, not a farmstead hence PRN134054 is incorrect in describing it as a Post Medieval Farm.

Damaged Ruined Building

2022/2023 Survey Description:

This structure was originally recorded as a Long Hut, but has the characteristics of a Sunken Shelter. It stands on a river terrace, to the south side of the Rhiwnant and measures 8 metres northeast to southwest, by 4.2 metres wide overall. The rubble built walls are quite thick however, and the structure is only up to 2 metres wide internally at the southwest end, then narrowing to the northeast end where the entrance is located. This form is characteristic of a Sunken Shelter. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

The foundation of a rectangular long hut or building which measures 8 metres northwest to southeast by 4.2 metres wide, the walls standing up to 0.8 metres high. Rough boulders seem to have been used to create the wall bases. The entrance appeared to be in the northeast lateral wall, where an orthostat stone each side of a gap in the wall.

Damaged Structure

2022/2023 Survey Description:

A sunken shelter which measures 9 metres long, east-northeast to west-southwest, and is 1.75 metres wide internally. The structure is defined by low earthwork banks, with the southern bank extending further west than the northern bank. This southern bank curves around at the western end of the structure to return and create an entrance in the northwest corner. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

An oval enclosure, possibly a denuded long hut or shelter, measuring up to 12 metres long, east to west, by 5 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Found during fieldwork and visible on aerial photographs and on Lidar.

If visited, date of the visit: 10-March-2022 JJH & RPS Trysor

Damaged Ruined Building

2022/2023 Survey Description:

The now roofless and derelict magazine building is associated with the Nant y Garw Lead Mine to which it is connected by a purpose-built trackway (ID number 805;PRN12149). It stands 200 metres to the northeast of the working area of the mine complex. The building is stone built and mortared, with red-brick used around the door reveals and quoins. A wooden lintel above the door and some wooden roof beams were still surviving when it was recorded in 2022. The doorway is through the southwest gable wall, and quartz blocks have been used to create a Maltese cross decoration in the wall to the right of the door when viewed from the outside. There is also graffiti stating "WE" on brick at the southeast corner. The red bricks are stamped as being made by T. Parry Jones Newtown, which makes them a product of the Park Brick & Tile Company, Newtown. The building is not shown on the 1888 Ordnance Survey map but is shown on the 1905 edition of the map, indicating it is late 19th or early 20th century in date. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A 19th century mine magazine, built of stone with redbrick detail around the doorway. Now roofless.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This building is roofless and will decay rapidly

Management Recommendations:

Monitor. Conserve?

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Verified during field survey

Near Intact Earthwork

2022/2023 Survey Description:

A trackway cut into the slope and revetted below on the downslope side. It was purpose built to connect the working area of the Nant y Garw lead mine to the mine magazine building, 200 metres away to the northeast. This trackway is about 125 metres long and up to 3 metres wide. It is not shown on the 1888 Ordnance Survey map but is shown on the 1905 edition of the map, indicating it is late 19th or early 20th century in date. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Not Known Structure

2022/2023 Survey Description:

This is a stone pile which measures 5 metres from north to south and 3.5 metres wide. There are possible crude wall base visible on the east and west sides and a possible opening on the northwest side. It is not clear whether this feature is a ruined stone shelter or a natural stone pile. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A very ruinous, rectangular stone structure, difficult to interpret.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low**

The interpretation of the site has been described as uncertain. On aerial photographs it appears to lie to the east of the NGR given.

Confidence After Survey?: **Moderate**

Recorded during field survey but true character not certain.

If visited, date of the visit: 22-June-2022 JJH & RPS Trysor

Damaged Complex

2022/2023 Survey Description:

A long and narrow drystone structure, sunk into the ground to the southwest side of the Marchnant stream. It measures 10 metres east-southeast to west-northwest, by 3 metres wide overall. The southwest side is set into the slope and revetted, the other walls are low and tumbled. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Described as a long and narrow drystone structure, with its interior lower than the surrounding ground level, this would appear to be a medieval dairy store or 'sunken shelter'. It measures about 10 metres northwest to southeast by 3 metres wide.

Identified Threats:

Threat?: **No**

Not Known Documentary Evidence

2022/2023 Survey Description:

A small structure was recorded in this area by CPAT in 1995. Ground photographs taken at that time appear to show the stone wall bases of a small rectilinear shelter or hut. No comparable structure was found by Trysor in 2022 at or near the location. Low bracken was present however and may have obscured some detail. There is stone strewn around the area but no structure was noted. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Described as part of a "platform formed of stones" but otherwise it is unclear what this site actually is. A ground photograph of the site held in the NMR shows an apparent levelled area with a stone revetment wall along two sides, but may not show the whole structure.

Damaged Earthwork

2022/2023 Survey Description:

The remains of a long hut, built on a natural stream terrace above the confluence of the Rhiwnant and Nant yr Ast streams. The terrace has been eroded by the stream which has resulted in the loss of the northern half of the long hut. All that now survives are 3 metres of the ruined lateral walls of the building, which was about 5 metres wide. Photographs taken by CPAT in 1994 suggest that the site has remained fairly stable during the period up to 2022.

Heritage at Risk 2016 Description:

The remains of a medieval long hut, which is situated on a natural terrace raised above the southern bank side of the Rhiwnant stream. Only the southern end of the hut remain, being 5 metres wide, with just 3 metres of the length of the building surviving, the rest having been lost to stream erosion.

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

The Rhiwnant stream has eroded over half of the long hut away

Management Recommendations:

Monitor. Excavate remaining part of long hut.

Scheduled?: Listed?:
NPRN?: 277126 CPAT HER Record?: 165286

Damaged Ruined Building

2022/2023 Survey Description:

Bryn Iago was a cottage which was occupied throughout the 19th century. By the early 20th century there were plans to build a dam in the vicinity of Ciloerwynt, as part of the Elan Valley dams scheme. Bryn Iago was abandoned and the house demolished in preparation for this, with a replacement cottage being built at the Cwm Elan Lead Mine. After demolition, plans for the new dam were abandoned, meaning that the loss of Bryn Iago was unnecessary. In 2022, only the ruined wall bases of the house remained, marking a footprint measuring 14 metres long, northwest to southeast, by 5 metres wide. Photos exist of the house when intact, showing that it was a storey and a half, faced the northeast and had a door northwest of centre with a window above, and a window the southeast of centre with a window above. There was an lean-to extension to the rear. A byre or workshop was attached to the northwest end of the house, with its floor level slightly lower. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

This farmstead was in occupation until the early 20th century. The former farmhouse is now a ruin, measuring 10 metres by 4 metres on a north-northwest to south-southeast axis.

Damaged Ruined Building

2022/2023 Survey Description:

The site of a drystone long hut situated to the south side of the Marchnant stream. It was built on a levelled platform terraced into the slope with a fan around the southeast end. Stream erosion has removed the northeastern side of the long hut. The surviving remains include the southwest lateral wall, which is 9 metres long, most of the southeast gable wall, which survives to 5.5 metres long, and a about 1.5 metres of the northwest gable wall. The southeast wall is up to 1 metre wide at the base and up to 0.80 metres high. The remaining walls are generally over 0.5 metres high. The long hut was subdivided internally into three cells. There is a narrow cell at the southeast end which measures only 1 metre wide northwest to southeast. The central cell is almost 2 metres wide, whilst the northwest cell is about 4 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A rectilinear drystone ruin, reduced to wall bases, measuring about 9 metres northwest to southeast by 4 metres wide.

Identified Threats:

Threat?: **Yes** **High** **Erosion**

Part of this structure has already been lost to stream erosion

Damaged Structure

2022/2023 Survey Description:

A possible "hut platform" was recorded here by CAP in 2003. When visited by Trysor in 2022 a jumble of stones on the south side of the stream was noted, consistent with ground photographs taken by CAP in 2003. The stones may outline a crude shelter, but equally may be naturally deposited stones within the rocky Llwydnant stream valley. The possible structure measures 4 metres from north to south and 3 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Ground photos show a short length of walling, perhaps 4 metres long, at the side of the Marchnant stream, possibly part of a truncated, rectilinear shelter or fold.

Identified Threats:

Threat?: **Yes** **High** **Erosion**

Stream erosion has changed the site since 2003 and animal and bracken also having an impact.

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **Low**
Not visible on aerial photographs. Recorded during field survey but not certain that it is an archaeological feature.

If visited, date of the visit: 22-June-2022 JJH & RPS Trysor

Damaged Structure

2022/2023 Survey Description:

A small stone pile, thought likely to be a damaged cairn, was recorded by CAP in 2003. There was evidence of a possible burial cist exposed within the cairn. The cairn measures about 1.5 metres in diameter and the cist measures about 2 metres long northeast to southwest, by 0.5 metres wide. This site was not located by Trysor in 2022, when visited as part of the NLHF funded Elan Links project, this site was in an area of rough pasture. It is possible that a natural feature had been mistaken for a built cist.

Heritage at Risk 2016 Description:

A small cairn with an exposed and robbed burial cist. The cist measures 2 metres by 1 metres.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: Low	Confidence After Survey?: High
The grid reference appears to be incorrect. CPAT could not find such a feature at the given location but CAP took a clear photograph of the cist in 2003 and it evidently exists somewhere in the vicinity of the Llwydnant stream.	Recorded during field survey

If visited, date of the visit: 22-June-2022 JJH & RPS Trysor

Scheduled?: Listed?:
NPRN?: 261710 CPAT HER Record?: 165518

Damaged Structure

2022/2023 Survey Description:

This site is a drystone structure within an area of quarry working, ID number 5116. Originally described by CAP in 2000 as a possible ROC training site, when it was visited by Trysor in 2022 it was identified as a quarry shelter, part of an extensive quarry complex. It lies at the lower northeast end of a quarry working into the slope. The rectilinear structure is built of unmortared flat mudstones or slate and measures 4 metres northeast to southwest by 3.5 metres. The southwest end is built into quarry spoil and the northwest side partially so. The northeast end is freestanding. The open sides of each rectangle face each other but are slightly offset. The walls are a maximum of 1.5 metres high. Internally at the base of the eastern wall is a small recess, 0.4 metres wide and 0.3 metres high. When visited by Trysor as part of the NLHF funded Elan Links project in 2022, there was very limited vegetation growing on and around the structure.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Not Identified**

No threat was identified in 2022, the quarry is not regularly visited by walkers and or off-road bikes. Grazing is poor so animals don't congregate within it.

Management Recommendations:

Continue to observe, and react to any changes

Confidence in Accuracy of Record:

Confidence Before Survey?: **None** Confidence After Survey?: **High**

It is thought that the grid reference is incorrect and that this is a feature in the quarry complex to the east. Recorded during field survey

If visited, date of the visit: 14-July-2022 JJH & RPS Trysor

Damaged Structure

2022/2023 Survey Description:

The remains of a ruined structure which is shown as a "Sheepfold" on the 1888 1:10560 scale Ordnance Survey map. It was a drystone structure, but has now been reduced almost completely to its wall bases and is large hidden in vegetation. Only the northeast side remains upstanding to any height. The fold measured 8.25 metres, northeast to southwest, by 5 metres wide. It is situated on a natural terrace to the north side of a tributary stream high up in the valley of the Nant y Clettwr. It is thought possible that an earlier long hut underlies the sheep fold, which stands on what appears to be an artificial platform.

Heritage at Risk 2016 Description:

Intact Building

2022/2023 Survey Description:

This wooden building was erected at the end of the 20th century to house some of the senior engineers working on the construction of the Elan Valley dams. The civil engineer Eustace Tickell was living here at the time of the 1901 census, when the house was known as Penygarreg House. It is now known as "The Engineer's House" and notable as it is probably the only wooden building constructed in association with the dam project which still stands on its original site.

Heritage at Risk 2016 Description:

A late 19th century timber framed, wood-panelled house.

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This wooden is over 100 years old and will continue to decay without active management.

Management Recommendations:

Monitor and maintain.

Damaged Earthwork

2022/2023 Survey Description:

An old trackway which was thought to be associated with the nearby Waun Geufron quarry, but during field it was noted that the trackway does not actually connect to the quarry, as it runs to the north side of a rill and does not cross it to reach the quarry on the southern side of the rill. The trackway runs roughly parallel to the modern Rhayader to Cwmystwyth road higher up the slope to the north. It may be an earlier route from Pont ar Elan towards Rhayader. It has become braided on the steep slope to the north of the quarry. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Near Intact Earthwork

2022/2023 Survey Description:

A relatively large quarry and spoil tip which is shown on late 19th century Ordnance Survey maps as a disused quarry. The excavations cover an area of some 40 metres x 30 metres and were entered from the south and northeast sides. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A relatively large quarry which is shown as a disused quarry on late 19th century Ordnance Survey maps.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Visible on aerial photographs. Identified in the field.
Landmark site in the landscape.

If visited, date of the visit: 10-March-2022 JJH & RPS Trysor

Damaged Complex

2022/2023 Survey Description:

A deserted settlement site which consists of two enclosures (ID numbers 2002 & 2004), three house platforms (ID numbers 2005, 2003 & 5163), a sunken shelter (ID number 2001) and two areas of ridge and furrow cultivations ridges (ID number 5164 & 5165).

Heritage at Risk 2016 Description:

A deserted settlement complex described by CAP and CPAT has having at least one earthwork platform, measuring 17 metres by 12 metres overall, associated with a small, square enclosure. It is possible that a second platform is present but the descriptions are not clear on this point.

Identified Threats:

Threat?: **Yes** **Low** **Agricultural activity**

2006 Google Earth image shows that reeds or bracken have been mown here. This could damage upstanding earthworks.

Management Recommendations:

Avoid earthworks if any future mechanical mowing of vegetation is undertaken.

Confidence in Accuracy of Record:

Confidence Before Survey?: **Moderate** Confidence After Survey?: **High**

Visible on aerial photographs but not clearly described.

Site generally visible in winter conditions, but thick bracken laying on the ground surface masked the southern area and could hide other features.

Damaged Structure

2022/2023 Survey Description:

Originally recorded at SN92556208, this Bronze Age cairn was in fact situated further to the north. The cairn was mistaken for a marker cairn originally, but upon re-examination by CPAT in 2005 was determined to be a funerary cairn. The funerary cairn measures about 6 metres in diameter and is 0.25 metres high. Some of the stones have been arranged to create a marker cairn on top of the original monument (ID number 5013). A small, kerbed, satellite cairn (ID number 5014) was also noted by Trysor immediately to the southeast of the original cairn.

Heritage at Risk 2016 Description:

Originally recorded at SN92556208, this Bronze Age cairn was in fact situated further to the north. The cairn was mistaken for a marker cairn originally, but upon re-examination by CPAT in 2005 was determined to be a funerary cairn. It is about 6 metres in diameter and 0.25 metres high.

OS NGR: SN9248262850 292482,262850	Previous OS NGR?: SN92486278 375 metres AOD
Scheduled?: NPRN?: 261397	Listed?: CPAT HER Record?: 166052

Damaged Structure

2022/2023 Survey Description:

An irregular enclosure to the west side of the Nant y Gro stream which appears to be associated with Longhouse ID number 3292. The enclosure is defined by earthwork banks, which are generally quite low and often denuded to a point that makes interpretation difficult in the field, but also on aerial photographs and LiDAR. LiDAR evidence suggests that the main harp shaped enclosure has two smaller, rectangular, enclosures at its southern end, alongside the stream. The northern end of the main enclosure is abutted by another rectangular enclosure within which the long hut is located. There also appears to be slight evidence of ridge and furrow cultivation within the main enclosure. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A series of boundary banks defining a field system associated with an unrecorded settlement site, apparently a longhouse, at approximately SN9251362877. The field system is extensive and appears to define areas of ridge and furrow cultivation, also unrecorded.

Identified Threats:

Threat?: **No**

Management Recommendations:

A more focused investigation of these features is required to construct an accurate site plan of the enclosure and its associated features. Geophysical survey may help, also more detailed Lidar survey.

Confidence in Accuracy of Record:

Confidence Before Survey?: High Visible on aerial photographs.	Confidence After Survey?: High Recorded in the field. The denuded nature of the earthworks hampers full interpretation.

Damaged Earthwork

2022/2023 Survey Description:

A curved, earthwork bank, which was originally recorded as an Enclosure, but is in fact only a semi-circular feature with its northern end left open and therefore not enclosing the ground. The bank measures about 16 metres and is terraced into a slope. If it was continued to form a full circle its diameter would be 11 metres, but there is no trace of any bank to the northern side. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A sub-circular enclosure of unknown date and function. It is visible on aerial photographs and appears to be about 13 metres in diameter, with the southern side terraced into the slope. The earth bank is up to 0.70 metres high and about 0.60 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High**
Visible on aerial photographs.

Confidence After Survey?: **High**
Recorded during field survey. Note that this feature has been misdescribed as an Iron Age Enclosure (PRN88948) 20 metres in diameter. This is not the case.

2022/2023 Survey Description:

The site of a cottage which stood here during the 19th century. It had been abandoned by the mid-20th century and only the outline of the building is present, recorded as being 12 metres long by 5 metres wide by CAP in 2003. The site is bracken-covered during the summer months. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

The remains of a cottage known as Pant, occupied in the 19th and early 20th century but now reduced to wall bases. The building measured 12 metres long by 5 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **High** Confidence After Survey?: **High**
Not visible on aerial photographs. Verified during field survey

If visited, date of the visit: 22-June-2022 JJH & RPS Trysor

Scheduled?: Listed?:
NPRN?: 261574 CPAT HER Record?: 165550

Not Known Documentary Evidence

2022/2023 Survey Description:

A stone crusher yard associated with the construction of the Garreg Ddu dam is mentioned in C.W. Judge's "The Elan Valley Railway" in 1987 and shown to be located to the southwest of Nant Gwyllt Church. This was based on the original engineers' drawings of the dam site. There is no photographic or Ordnance Survey map evidence of such a feature. LiDAR appears to show a possible cutting to the southwest of the church, which forks as it runs eastwards. However, these features may be related to forestry operations. A modern mountain bike track partially confuses the image and recent tree felling in the area made ground survey impossible in 2023. It is therefore not clear where the crusher yard was based on modern sources or field survey.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **Low** Confidence After Survey?: **None**
Not visible on aerial photographs and the area is now afforested. No field or map evidence of this feature

Intact Structure

2022/2023 Survey Description:

The Dolymynach dam, built as part of the Elan Valley dams scheme in 1904.

Heritage at Risk 2016 Description:

A stone dam, left partially constructed in about 1904. It was begun to create the Dol y Mynach Reservoir but never completed. Later in the 20th century it was superseded by the larger Claerwen Reservoir.

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

The dams and reservoirs of the Elan and Claerwen valleys were not included in the 2022 field survey undertaken by Trysor.

Damaged Structure

2022/2023 Survey Description:

This is a large, recumbent stone slab, which measures 3.6 metres in length, east to west, by 1 metre wide and 0.9 metres thick. The stone is scheduled as a recumbent Bronze Age standing stone, but it may in fact have always lain recumbent and represent a variation in the standing stone tradition. Sheep scraping around the stone has created a hollow in which smaller stones are exposed, which may be packing stones. Another large stone lies along its northern side and has been recorded as PRN 4338 by CPAT, but has been dismissed as a natural feature. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

A recumbent stone, measuring 3.6 metres long by 1 metre wide and 0.9 metres thick which may be a fallen Bronze Age standing stone. It is uncertain if this is the case however.

Damaged Structure

2022/2023 Survey Description:

Originally recorded as a prehistoric hut circle, field examination by Trysor in 2022 suggests that this stone ruin is not circular in plan, but is markedly square, with straight walls evident on all sides. Overall it measures approximately 7 metres northeast to southwest by 6 metres wide. It has been reduced to stone wall bases, which now measure between 1 metre and 2 metres wide and up to 0.3 metres high, due to the spreading of stone as the structure fell into ruin. Internally it therefore measures only about 3 metres by 3 metres. The walling appears thicker to the southwestern side, where there is a pile of stone against it. There also appears to be an entrance through the northwestern side. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was molinia and grass.

Heritage at Risk 2016 Description:

A hut circle which lies outside the scheduled area of the Craig Llyisiau Hut Circle settlement (BR209). It measures 8 metres by 7 metres and has thick "walls" up to 3 metres wide.

Identified Threats:

Threat?: **No**

Management Recommendations:

None. Note - this structure is supposed to lie within the scheduled area of the Craig y Llyisiau Settlement, but the polygon does not extend far enough to the east and therefore at present it lies outside its boundary.

Confidence in Accuracy of Record:

2022/2023 Survey Description:

A Bronze Age stone circle which consists of 21 small stones, 7 of which are still upright. It measures 24 metres east to west by 23.5 metres north to south. There is also a single, recumbent stone at the centre of the circle. The 2023 LiDAR coverage for Wales appears to indicate that the circle may be slightly embanked, a characteristic which is not immediately evident on the ground. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

A Bronze Age stone circle consisting of 21 visible, small, monoliths. The circle measures 22 metres in diameter with the stones set between 2 to 3 metres and up to 5 metres apart. A standing stone (PRN13524) recorded 40 metres to the north-northeast is said to be associated with the stone circle, but it is not included in the scheduling.

2022/2023 Survey Description:

This small, former farmstead is situated on an east facing slope at the eastern side of the Elenydd hills. It was occupied in the 19th century but seems to have fallen out of occupation during the 20th century. The house was noted as being abandoned by the RCAHMW in 1989 but has now been restored, and reused. The RCAHMW also recorded an earlier house dating to circa 1800 here alongside the present house which dates to circa 1880. It is not known where the old house stood, but it may have been at the site of the single outbuilding now seen south of the house, which has been modernised as a garage. It is not a working farmstead.

Heritage at Risk 2016 Description:

A small farmstead which was occupied in the 19th century but seems to have fallen out of occupation during the 20th century. The house and an outbuilding have been restored and reused in the early 21st century. It is not a working farmstead.

Not Applicable Natural Feature

2022/2023 Survey Description:

This feature was originally recorded as a possible pit, measuring 5 metres by 4 metres, with surrounding banks. The location was visited in 2022 by Trysor and a hollow noted close to the original grid-reference of SN91007106 was thought to be a natural feature. CPAT have recorded this feature as PRN 43894, and attributed it a different grid-reference, putting it 75 metres further to the south. However, but no trace of the feature was found at this location either, though undulations on the hill surface, thought to be natural, were noted in this second location. It has not been possible to match the description to any other feature in the immediate area. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: **None**

The grid-reference appears to be inaccurate. CPAT suggest this "pit" is in fact a possible rectangular building PRN43894.

Confidence After Survey?: **None**

No archaeological feature appears at this location.

Not Known Structure

2022/2023 Survey Description:

This reputed stone alignment was recorded in 2000 but CPAT failed to find any evidence of it during fieldwork in 2002 and Trysor could not find it in 2022. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was reeds.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: None CPAT could not find this site in 2002 and the grid-reference was questioned.	Confidence After Survey?: None These stones were not been found by CPAT in 2002 or by Trysor in 2022. They do not exist at this location.

Damaged Earthwork

2022/2023 Survey Description:

This square enclosure measures 20 metres east to west, internally, by 18 metres north to south. It is defined by a substantial bank on its north side which is 3 metres wide at base. The eastern side is partially formed by a natural slope. The western side is similar to the northern. It appears to have an internal gully which is 1.25 metres wide so the interior appears to be 'raised'. Animal erosion is visible at the northeast corner of the enclosure. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Mechanical cutting**

The 2006 Google Earth image shows that the area immediately to the south had been mown to control reeds or bracken.

Management Recommendations:

Ensure future mechanical mowing avoids this earthwork. Bracken removal would be advantageous however.

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **High**
Well-preserved, upstanding earthworks, visible in winter conditions, though masked by dead bracken.

If visited, date of the visit: 25-February-20 JJH & RPS Trysor

Photographs:

Damaged Earthwork

2022/2023 Survey Description:

An enclosure which is tear-drop in shape and defined by a bank with an internal gully. It measures 40 metres long east to west by 28 metres wide and is located on a southeast-facing slope and is probably part of Deserted Settlement PRN166040. The southeast corner is missing or damaged. A small mound just to the southeast may be part of it, however it is not recorded separately. A track runs through the southern part of the enclosure.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Agriculture**

In 2006, Google Earth shows that the bracken on this enclosure was mechanically mown.

Management Recommendations:

Avoid mowing bracken on this site with heavy machinery to avoid surface damage. Bracken removal would be advantageous however.

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **High**
Despite the banks being ephemeral in places, bracken growing in the internal gully picked out the outline of the enclosure.

If visited, date of the visit: 25-February-20 JJH & RPS Trysor

Damaged Earthwork

2022/2023 Survey Description:

This long hut measures is 9 metres in length, northwest to southeast, by 5 metres wide, standing on a well-defined artificial platform which measures 14 metres long by 10 metres wide. The rectilinear stone footings of the building are visible, though by moss, rushes and bracken. The wall bases are 1 metre wide and up to 0.3 metres high, rising up to 0.5 metres high in places. The fan is 2 metres deep and 1.5 metres high. There is a drainage gully circa 1-metre wide around the northeast end of the long hut. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Agricultural Re-Use**

In 2006, Google Earth shows that the bracken on this long hut was mechanically mown. Machinery passing over this site could damage the exposed wall bases.

Management Recommendations:

Avoid crossing this long hut and platform with farm machinery

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **High**
A well-defined platform with clear evidence of wall bases of the long hut which stood here.

Damaged Ruined Building

2022/2023 Survey Description:

The ruins of a stone cottage. The roughly-coursed walls are bond with a clay and lime mortar. The walls are approximately 0.5 metres wide and generally stand between 1m and almost 2 metres high, being most intact at the eastern end. The cottage appears to have been single-roomed, with a fireplace in the east-northeast gable wall. A second room attached to the east-northeast end was accessed externally only and may have been for storage. There is evidence of a slate roof as some pierced roof slates were found around the site. Graffiti was noted on the stonework of the east-northeast corner of the cottage. It appears to say "DMD XL." When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

This cottage may be the site of the Llust Troedyrhiw cottage shown on the Cwmdeuddwr tithe map of 1840. This could also be the same place as an unidentified dwelling known as Llust Wen is also recorded on the Cwmdeuddwr census of 1841, listed between Treheslog and Troedyrhiw farms,

Damaged Earthwork

2022/2023 Survey Description:

A Bronze Age cairn now surviving as a low mound with high stone content which is obscured by vegetation. A central stone cist has had its capstone pushed to the eastern side, leaving it open. The capstone measures 1.2 metres long by at least 0.70 metres wide. The cist is quite high in the mound. The mound is 4 metres in diameter and 0.40 metres high. The cist is defined by two parallel slabs forming the east and west sides. The slab on the west side remains in place whereas the one to the east side has been dragged out of place to the east. There is an animal burrow in the northeast quarter of the mound. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Animal Burrowing**

Animal burrowing is impacting on the northeast quarter of the mound.

Management Recommendations:

Monitor and manage. Should be considered for scheduling in view of group value with other Bronze Age monuments in the area.

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **High**
Clearly visible

Damaged Earthwork

2022/2023 Survey Description:

This is an area of peat cutting with a distinct southern edge. The cutting measures 30 metres in length east to west, by 15 metres wide. The northern edge of the cutting is not as clear but to the north is a distinct mound which is irregular in shape and may be connected e.g. peat stacking area. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Damaged Earthwork

2022/2023 Survey Description:

This is a denuded cairn within which a stone lined cist is exposed. The cist now consists of one long edge slab measuring 2 metres in length and 0.60 metres in height on the southwestern side. It is slightly leaning into the centre of the mound. The stone on the northeastern side of the cist has collapsed. There are possible kerb stones forming the edge of the cairn mound which is up to 5 metres in diameter. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor to ensure cist does not become filled with vegetation. Should be considered for scheduling in view of group value with other Bronze Age monuments in the immediate area.

Damaged Earthwork

2022/2023 Survey Description:

This is a mound obscured by moss and bilberries but a stone content can be felt when prodded. The mound could be natural feature due to vegetation covering a rock outcrop, or it could represent a cairn. It measures 4 metres in length south-southwest to north-northeast, 3 metres in width and 0.5 metres in height. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **Low**
A possible archaeological feature, but may be of natural origin.

Damaged Earthwork

2022/2023 Survey Description:

This sunken shelter is aligned southwest to northeast. It is 6 metres long, with an extra 1.5 metre "fan" at its southwest end. It is 2.5 metres wide at the top of the cut, narrowing to 1.5 metres at the base. The shelter is open at the northeast end where it narrows and curves to the east-northeast. This curved section is 3 metres long overall. Edge set stones line the side inside the shelter although these are largely obscured by vegetation. It appears as a linear trench with spoil cast to either side. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Near Intact Structure

2022/2023 Survey Description:

A culverted stone bridge with 3 'box' stone culverts surrounded by nicely covered slate carrying a constructed track over the stream. The upstream side of the bridge is obscured by the turf. It measures 3.5 metres wide and 1.25 metres high. It is thought that it might be roughly contemporary with the construction of the Craig Goch dam as the bridge and associated track are not shown on late 19th century maps. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

The bridge has survived relatively well for over a century but natural processes will weaken the structure and associated trackway.

Management Recommendations:

Monitor and maintain as required.

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **High**

Damaged Earthwork

2022/2023 Survey Description:

A series of three earthwork platforms or terraces created in the early 20th century a platforms for artillery pieces used by the Royal Artillery during training. Spoil from the platforms has been pushed forwards to the west to form a protective embankment. There is a slight gully around the edge of the terraces. A shallow gully, some 30 metres long, runs almost north to south along the eastern side of the three terraces, effectively connecting them. The central terraced area is smaller than the other two and measures 3 metres by 3 metres. The northern platform measures 6 metres east to west by 5 metres wide and the southern platform measures 6.5 metres east to west by 5 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Erosion**

These earthworks are not obvious and could easily be disturbed or damaged due to lack of recognition.

Management Recommendations:

Survey and map in detail, interpret on site to improve recognition.

Confidence in Accuracy of Record:

Damaged Earthwork

2022/2023 Survey Description:

This sunken shelter is cut into the north facing slope with banks to the west and the east. It measures 8 metres in length by 5 metres wide overall, but internally it is 6 metres long and 3 metres wide at the top, narrowing to 1 metre wide at the base and 1 metre deep. The feature is more pronounced on the east side. There is an entrance at the north end which is slightly turned to the northwest. Some stones are visible revetting to the eastern side, but generally turf covered. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

2022/2023 Survey Description:

A series of four platforms or terraces created as platforms for artillery pieces in the early 20th century and used by the Royal Artillery during training camp. Each terrace measures 4 metres by 4 metres. Spoil has been pushed forward to the west to create a low embankment. The platforms are arranged in line from north to south and are connected by a shallow gully, 0.5 metres wide by 0.25 metres deep, which runs for about 60 metres along their eastern side. Along this gully several square hollows were noted, 0.5 metres square. Shorter gullies also run from each platform to the road to the east. The guns were set here to fire westwards towards a target area on Esgair Rhiwlan. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Erosion**

These earthworks are not obvious and could easily be disturbed or damaged due to lack of recognition.

Management Recommendations:

Survey and map in detail, interpret on site to improve recognition.

Damaged Earthwork

2022/2023 Survey Description:

This linear earthwork feature which appears to be an old boundary bank. It survives as a low, broad bank up to 3 metres wide and 0.5 metres high. It runs from SN9026563255, which at the head of a minor stream at the northeast side of Rhos y Gelynnen. The then runs west-southwest before turning south-southwest at SN8999763211 and then turning back eastwards to run to the south of the upper reaches of the Nant Gwylt stream, seemingly petering out around SN9037362603. Only the section from SN8999763211 to SN9037362603 appears on the 1st edition 1:10560 Ordnance Survey map of 1888, but there is no reason to doubt that the northern section existed by that time and that the boundary predates the late 19th century and may be of some antiquity. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Damaged Earthwork

2022/2023 Survey Description:

A denuded Bronze Age Ring Cairn found on a gentle, east-facing slope overlooking the lower Claerwen valley. It is defined by a low, circular bank of stone which is about 10 metres in diameter, some 1.2 metres wide and up to 0.2 metres high. The bank is seen most clearly on the western side. The northeast side has been damaged by animal feeding points. Stone is scattered on the surface inside and outside the bank. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was on an area of open access land within a semi-improved pasture field.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Agriculture**

This monument is within an improved field parcel and has had animal feeding points placed on it. It is susceptible to future degradation from agricultural activity.

Management Recommendations:

Avoid using this stony site as a feeding point for farm animals. Monitor.
Consider for scheduling.

Damaged Earthwork

2022/2023 Survey Description:

The platform is a levelled area south-southeast to north-northwest, measuring about 10 metres long by 5 metres wide overall. There is a pronounced fan and apron. The north-northwest end is disturbed by a late leat (ID number 3071) which cuts across just below the fan. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Adaptive Re-Use**

The platform is close to a footpath and a working farm. Future recreation use or land management could erode or damage the feature if it is not recognised

Management Recommendations:

Monitor. Avoid tree planting on or close to the platform.

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **High**
Recorded during field survey

2022/2023 Survey Description:

An earthwork leat running along the western side of the valley to the north of Ciloerwynt. It is rock-cut in places. There is an earthwork bank along the downslope edge of the leat gully. The leat may have fed a long disused pond (ID number 5107) to the northwest of the farm buildings at Ciloerwynt. The leat also cuts across the platform ID number 3070. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Adaptive Re-Use**

The leat is close to a footpath and a working farm. Future recreation use or land management could erode or damage the feature if it is not recognised. Tree planting has taken place nearby and the modern footpath cuts across the leat.

Management Recommendations:

Monitor. Avoid tree planting on or close to the leat.

Damaged Earthwork

2022/2023 Survey Description:

An earthwork bank which is stone faced on the western side with upright slabs. It starts at SN8805062642 at 340 metres above sea level. It runs south from a crag at this point, across a boggy stream valley and then runs southeast up onto the opposite slope. At SN8816 62362 the earth bank stops and continues as a stone bank for another 5 metres. It may have continued further but this is not clear. Visited in 2022 as part of the NLHF funded Elan Links project.

Damaged Earthwork

2022/2023 Survey Description:

A long hut which measures 10 metres long east-northeast to west-southwest, by 6 metres wide. It was built with rough stone blocks to create wall bases up to a metre wide. In its southern side, 6 metres from the west-southwest end, is a doorway, 0.9 metres wide. From the western side of the doorway are the foundations of an internal wall with doorway at its northern end. This wall is only 0.6 metres wide. At the eastern end of the longhouse there is a lower rectangular area with jumbled stone on it.

The longhouse has an subcircular enclosure attached to its eastern end. The enclosure is defined by a low stony bank up to 1 metre wide and 0.60 metres high. At the eastern side of the enclosure, external to the bank is a stony platform measuring 4 metres north-northwest to south-southeast by 2 metres. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

2022/2023 Survey Description:

This is the remains of a two-celled structure. There is a step down in the internal floor level putting it in the longhouse tradition rather than a simpler long hut.. The wall bases are of a rough build, but only foundations now remain. The building measures 12.5 metres east-southeast to west-northwest, by 6 metres wide. The wall bases are 0.70 metres wide and stand up to 0.7 metres high. The longhouse sits on a raised platform. There is no obvious entrance but there may be one in the east-northeast end. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was bracken.

Near Intact Earthwork

2022/2023 Survey Description:

One of the several slate quarry workings south of Crugyn Ci. It consists of the quarried area with possibly several smaller faces with a shale/slate spoil tip. It is low in profile and slate built retaining walls to define tips. It is possibly U shaped drystone working shelter on top and still standing 2.5 metres high. There is a large grassed over quarry in the north from which maybe most of the spoil tip defined. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Recreational Use**

People have already moved or rearranged some stones from the quarry tips and this should be avoided in future.

Management Recommendations:

Monitor

Near Intact Earthwork

2022/2023 Survey Description:

An earthwork platform which is cut into the slope at its western end with a fan that comes around either side. There is a possible trace of wall foundations on the platform, appearing as a low bank which is 3.5 metres wide from north to south and 9 metres long from east to west. The fan is 2 metres long by 2 metres high, whilst the flat terrace of the platform is 12 metres long. The platform apron is 4 metres long and 2 metres high. Overall, therefore the platform measures 18 metres long east to west, by up to 9 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Other**

The platform has a boundary fence across it and its two halves are in different management regimes. A sheep track also cuts across the upper part of the platform.

Management Recommendations:

Monitor. Move fence line off the platform.

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **High**
Recorded during field survey. Visible on Lidar.

If visited, date of the visit: 15-May-2022 JJH & RPS Trysor

Damaged Earthwork

2022/2023 Survey Description:

This appears to be a possible sheepfold which may have been created when the original earthwork field boundary bank enclosing the land attached to Lluest Clettwr as shown on the parish tithe map (field parcel 849) was superceded by a new bank further to the west. Where the old bank and new bank met, it appears that an earthwork fold was created, measuring approximately 18 metres west-northwest to east-southeast, by 10 metres wide. It survives as an earthwork feature within the field today, defined by banks and ditches, but difficult to interpret on the ground due to reed and Molinia cover. On the southern side there is an earthwork bank running west-northwest to east-southeast, with two parallel banks forming the north side. It is possible that it is a fold which was attached to the original field boundary, but it is not shown on the parish tithe map. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of for rough pasture.

Damaged Earthwork

2022/2023 Survey Description:

A crude rectilinear enclosure on the eastern side of Nant y Gro which is defined by rubble banks. It measures 15 metres long, north to south, by 7 metres wide and does not appear to have any internal divisions. The walls are spread up to 1 metre wide and up to 0.3 metres wide. Its form and dimensions suggest it is a fold rather than a longhouse or longhut. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Near Intact Earthwork

2022/2023 Survey Description:

A large earthwork platform which is terraced into the slope at its southwest end. Overall it measures 24 metres southwest to northeast and is 9 metres wide. The sides of the fan continue around the sides of the levelled platform and possibly turn into the centre of the platform, almost separating the upper, southwest, end of the platform from the northeast end. The southwest part of the platform may therefore have held a structure, and the northeast area served as a "yard". When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Scrub Growth**

Bracken has invaded the platform and its environs and may affect buried features.

Damaged Earthwork

2022/2023 Survey Description:

The fragmentary remains of a former cottage are found within an enclosure, defined by a bank and ditch. This site appears to represent the remains of the earlier cottage at Ty'n y Pant, which was still occupied at the time of the 1840 parish tithe map, but had disappeared by the late 19th century and is not shown at all on the 1888 Ordnance Survey map. There is some stone visible around the margins of the former cottage and a level platform where it once stood. These indicate the building measured 10 metres long west-southwest to east-northeast, by 5 metres wide. There are two large blocks of stone across the ditch to east-northeast, it is unclear if they are associated. Visited in 2022 as part of the NLHF funded Elan Links project.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

Ensure this feature is undisturbed by any future tree management or tree planting within the enclosure. Mature trees stand close to the site at present.

Damaged Earthwork

2022/2023 Survey Description:

An earthwork enclosure which was associated with the original cottage at Ty'n y Pant (ID number 3262). It is defined by a large earthwork bank, topped with mature with trees, which has some internal ditching around it margins. It measures circa 77 metres northwest to southeast by 53 metres southwest to northeast. By the early 20th century a new cottage had been built outside and east of the enclosure. The site of the original cottage is still recognisable in the northeast corner of the enclosure. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Tree Felling**

Mature trees grow on the enclosure banks.

Management Recommendations:

Future management of the mature trees growing on the banks of the enclosure, and any replanting, should avoid damaging the enclosure banks.

Damaged Earthwork

2022/2023 Survey Description:

An earthwork bank defining part of a former field system, probably predating Ty'n y Pant cottage and not shown on historic mapping. The bank, with a shallow ditch to its west side, runs north-northwest upslope from the northeast corner of enclosure ID number 3263 until it reaches the present trackway skirting the south side of Cnwch. This section of the bank is largely hidden within a small coniferous plantation, but is still visible on LiDAR. Upon reaching the track, the bank turns east and runs parallel to the south side of the forementioned trackway for approximately 150 metres, and then turns sharply to run back downslope for some 40 metres to the trackway which ran to the 20th century cottage of Ty'n y Pant from the east. From this point the bank continues as boundary bank ID number 3266, forming the next part of the field system.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Tree Felling**

The management or removal of the conifers planted over the western part of this bank could cause damage to it.

Management Recommendations:

Ensure tree management or removal or replanting avoid damage to the earthwork bank.

Near Intact Earthwork

2022/2023 Survey Description:

It is a square enclosure just to the east of Ty'n-y-Pant, measuring about 22 metres east to west by 20 metres north to south. It is defined by a low bank which is 1 metre wide and 0.2 metres high. On the north side it is more lynchet and gully than bank. There is a possible internal bank running north to south. The overlying bracken obscures the western and central parts of the enclosure. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

Damaged Earthwork

2022/2023 Survey Description:

An earthwork bank defining part of a former field system, probably predating Ty'n y Pant cottage and not shown on historic mapping. This bank is a continuation of Bank ID number 3264 which it meets at SN9279163172, at the northern side of the trackway which led to Ty'n y Pant cottage from the east. The bank runs east-northeast, parallel to the north side of the trackway for some 40 metres and then turns south to run for another 110 metres before seemingly ending at a natural gully at SN9284663123. A third bank, ID number 3269, continues the field system boundary to the south of this gully. The northern part of the boundary has been damaged alongside the trackway, and the trackway runs over the bank where it turns south indicating that it was out of use by the time the trackway came into existence. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Near Intact Earthwork

2022/2023 Survey Description:

An east to west trackway which runs to the site of the now ruinous Ty'n y Pant cottage. The trackway actually predates the 20th century cottage at Ty'n y Pant and is shown on the 1840 tithe map running south of the earlier cottage of the same name, which was located to the northwest of the later house. The trackway also runs across a boundary bank (ID number 3266) forming part of the abandoned field system at Ty'n y Pant, at the given grid-reference, indicating that the field system had been abandoned before the mid-19th century. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Damaged Earthwork

2022/2023 Survey Description:

A longhouse or long hut which is defined by low wall bases, now covered by moss and bracken with some stone visible through the vegetation. Thick bracken across the surrounding area means that the structure is only clearly visible during the winter and spring months. The building measures 10 metres northwest to southeast by 5 metres wide. There is an internal division 5 metres from the southeast end where a line of stones cross the floor of the building. There is also a doorway in the centre of the northeast facing side into the larger, southeast, cell. A boundary bank (ID number 3269) ends 2 metres from the building but they appear to be related. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Damaged Ruined Building

2022/2023 Survey Description:

This is a rectangular drystone structure which is set on a levelled platform, terraced into a slope at its southern end. There are stoney wall bases on three sides, standing up to 0.4 metres high, but the south side is represented by the cut into the slope. The east and west lateral walls are now represented by broad stony banks, whilst the northern gable end wall measures 0.75 metres wide. Of the platform is 2 metres long and 1.5 metres high. The long hut stand inside an earthwork enclosure (ID number 3261). When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Heritage at Risk 2016 Description:

Identified Threats:

Damaged Earthwork

2022/2023 Survey Description:

The remains of a long stone building. It is shown on the tithe map and the 1888 1:10560 Ordnance Survey map and may be the location of the cottage of Penygwaith. The 1888 map annotates the area as Penygwaith, but the name is placed closer to a smaller building 40 metres to the northeast and it is not clear which of the buildings housed the dwelling here. This building has long been out of use. The 1905 Ordnance map shows its eastern half as roofless and by the mid-20th century it was no longer shown on mapping. In 2022 there was some evidence of coursed stones visible in the surviving wall bases. The building was terraced into the slope on the southwest side and partially on the northwest and southwest ends and divided into relatively equal cells, the northwest being slightly larger. Overall it measures 12.25 metres northwest to southeast, by 4.2 metres wide. A modern track passes close to its northwest end but seems not to cut across the building. The northwest wall is 0.6 metres wide. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Heritage at Risk 2016 Description:

2022/2023 Survey Description:

An old shaft is marked here on the First Edition 1:2500 scale Ordnance Survey map. It now survives as a large grassy hollow at the side of the trackway, which is clearly artificially cut into the slope and measures circa 12 metres in diameter. At the southeast end of this hollow is a smaller hollow which measures 4 metres in diameter and has material dumped in it. This may be the infilled shaft. There is a spoil tip on the opposite side of the track to its northeast. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture.

Intact Structure

2022/2023 Survey Description:

The site of a modern memorial, presumably marking the location of cremation burials. The monument consists of a planted Rowan tree within a decorative metal protective railing, which has memorial plaques attached. The railings are kept dressed with ribbons and artificial flowers. A memorial bench is located a short distance to the north at the side of the access track to Ty'n y Llidiart.

Near Intact Earthwork

2022/2023 Survey Description:

A small, rectilinear enclosure, defined by earthwork banks, which are up to 1.5 metres wide at base and 0.5 metres high, with a rounded profile. The enclosure measures 9 metres long northeast to southwest by 6 metres wide.

Notably, this small enclosure was built abutting the southeast side of an earthwork boundary bank which runs northeast to southwest across the floor of the Nant Methan valley and also continues up the valley slopes and beyond further to the east and west. A larger enclosure (ID number 3310) abuts the northwest side of the boundary at this point and is likely to be contemporary with this smaller enclosure.

This boundary appears on the parish map and represented the historic division between the enclosed farmland to the east and open hill pasture to the west. By the later 19th century, this part of the boundary bank had been replaced by a stone wall (ID number 443), which was built w

Near Destroyed Earthwork

2022/2023 Survey Description:

A rectilinear, levelled area sunk into the ground and surfaced with concrete. It is the foundation for a quarry building used when the Marchnant Quarry (ID number 26) was operational in the mid-20th century. It measures 11 metres long, north-northeast to south-southwest, by 5 metres wide. There is a rough stone revetment on the east side. At the south end to the western side, there is a set of 5 stone steps, now grassed over. It is set on a large area of levelled tip to the west side of the trackway through quarry complex. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in a derelict quarry complex.

Damaged Earthwork

2022/2023 Survey Description:

A stony bank with a gully to its east side which is 0.3 metres and 1 metre wide. It runs from a tributary stream of the Llwydnant to the south, from SN9088159975, continuing north across Waun Lwyd for 1.37 kilometres to Nant Ddu to the north, ending at SN9128661107. A separate boundary bank continues the line northwards as far as Nant y Gro. The boundary is shown on the 1847 parish tithe map. The central section of the boundary has been damaged by 19th century peat cutting, but it is still visible on LiDAR. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was in an area of rough pasture.

Damaged Earthwork

2022/2023 Survey Description:

An area of relatively broad ridge and furrow cultivation covering an area of approximately 3.2 hectares, within a triangular field parcel. This field did not exist at the time of the 1847 tithe map and its eastern boundary only appears on later 19th century maps. The apex of the triangle is to the north, and the field is sub-divided by two shallow rills which cross it from east-northeast to west-southwest, creating three distinctive areas of cultivation. The northern area has cultivation ridges running north-northeast to south-southwest, which may extend beneath the eastern boundary of the present field and up onto the slopes of Gro Hill. The central area also has cultivation ridges running north-northeast to south-southwest, whilst the southern area has cultivation ridges running northeast to southwest.

Near Destroyed Structure

2022/2023 Survey Description:

It appears that a small mast was erected near Pen y Gorllwyn Cairn I at some point in modern times. All that survived when the site was visited in 2022 was a steel socket set into the ground, which presumably held the base of an upright mast, with a metal spike or bar protruding from the ground nearby. The socket is set into a small stone cairn, which is one of a group of six similar small cairns (ID number 5062) in the immediate vicinity, with some metal seen in another one of these. These cairns may be Bronze Age satellite cairns to the nearby Pen y Gorllwyn Cairn I, some of which were re-used to secure the base and supports for the mast.

Destroyed Documentary Evidence

2022/2023 Survey Description:

The Allt-Goch Mission Hut was established in 1905. The building used was a wooden shed which had served as a shop and was originally located at Allt-Goch Fach, on the banks of the River Elan. When the waters of the Penygarrag Reservoir rose in 1904, this wooden shed floated to the surface and was pulled onto dry land and re-used as the Mission Room, under the chapel-of-ease at Nantgwyllt. In 1905, Mr. H.R. Protheroe was licensed to preach at the Mission Room for 25 years. It served the rural community of the area until 1965, but then fell out of use. The building no longer survives, but its site is still visible alongside the present cycleway along the Elan Valley.

Damaged Structure

2022/2023 Survey Description:

A stone pile which measures 2.5 metres northeast to southwest, by 1.5 metres. It lies at the base of a southeast-facing slope. It may represent the remains of a small structure associated with the nearby Longhouse ID number 268 and is found just outside a small yard area attached to the northwest side of the longhouse.

Near Intact Earthwork

2022/2023 Survey Description:

This linear cut runs for at least 140 metres, possibly longer, on an almost north to south alignment. The cut measures 4 metres wide at the top, narrowing about 1 metre at base, and is up to 1 metre deep. A bank runs along the eastern, downslope side of the cut, with evidence of spoil quarried from the cut spread downslope in some places. At the northern end of the cut LiDAR shows what appears to be a long spoil tip derived from this working. It is spread for about 140 metres to the northeast, as far as the site of the now lost Cringwm cottage. LiDAR seems to show that the spoil overlies the post medieval boundary bank in some places.

It appears to have been created by mining activity, either cut as a long prospecting working or to exploit lead ore just beneath the surface. At some point a trackway has extended along the cut, from the common boundary at Cringwm to the north, up onto the hilltop west of Glannau Wood to the south. This trackway is not shown on any historic mapping apart from the 1830 Ordnance Survey First Series map. It may be that the trackway developed along the gully left by earlier mining works, or that the trackway was created in association with ongoing mining works.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

The mining features on Cwn Llanerch-ty-newydd merit detailed documentation. They may be associated with a search for new ores by the nearby Cwm Elan mine during the 19th century.

2022/2023 Survey Description:

A low, stone pile on the top of a moderate hillslope above the northern side of the Rhiwnant valley. It appears to be a funerary cairn, with a cist visible to the centre of the cairn which has not been opened. It measures 3 metres in diameter, by 0.15 metres high. There is a hint of a kerb around the northern upslope edge. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass and moss.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None. This cairn has been photographed by David James as "Craig Llysiu Stone Pile 1" which is a cairn recorded by the RCAHMW as NPRN403683. The NGR and description of NPRN403683 does not correspond to this site however. Also NPRN403683 was not found by Trysor in 2022 and its description is confusing - stating it to be west of Craig y Llysiu when it has an NGR putting it to the east.

2022/2023 Survey Description:

The remains of a prehistoric hut circle, now surviving as a circular stony bank which is presumed to have been the base of the hut. This stony bank measures up to 1m wide with an entrance through its east-southeast side. Overall measures about 8 metres in diameter and is up to 0.2 metres high. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass with some reeds in the centre.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

Monitor. Scheduled site. Originally recorded as Waun Lydan Hut I by CPAT but changed as it is part of the scheduled Craig y Llysiau settlement.

Confidence in Accuracy of Record:

Intact Earthwork

2022/2023 Survey Description:

A circular grass covered mound which has stones around its circumference that appeared to have been laid in place. It measures 7 metres in diameter and up to 0.75 metres high. It is not clear whether the mound is a Bronze Age funerary round barrow or cairn, or a natural feature. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

Further evaluation required to understand this feature

Damaged Earthwork

2022/2023 Survey Description:

A hollow dug out at the base of a rock outcrop, with spoil thrown up to the western side. Quartz is present in the hollow indicating this is likely to be a mining trial. There are possibly more hollows to the southwest. The prospecting trench is oriented north to south and has a diameter of 3 metres and a depth of 0.5 metres. Quartz is exposed within and around the trench. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was grass and reeds.

Damaged Earthwork

2022/2023 Survey Description:

A linear earthwork boundary bank running north to south. The bank is 0.6 metres high and 2.5 metres wide at the base with ditch or gully to its Western side 2m wide and 0.50m deep. It runs for some 880 metres from SN8913467369 at the north bank of the Nant Brithgwm to the south, northwards to the top of a natural crag on Esgair Brithgwm at SN8936068155. The boundary line appears to then continue northeastwards from the bottom of the crag at SN8940568169 to the main road and possibly then joined other boundary banks in the field system around Llanerch Llyn. This bank is however quite old as it is cut across by a field boundary forming the western side of field parcel 865 shown on the parish tithe map of 1840, indicating that it was already out of use by the time that the post-medieval boundary shown on the tithe map was built. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was molinia and grass.

Near Intact Earthwork

2022/2023 Survey Description:

A 6m wide earthwork platform area cut parallel to the hill contours into a steep, north-facing slope. It lies adjacent to the western side of another platform (ID number 3381) and was probably ancillary to its larger neighbour.

The earthwork is aligned north to south, including a 2 metre fan, 1.2 metres deep, at its northern end, a 4.5 metre wide terrace sloping south to north and a 1.5 metre long apron, 1 metre high at its southern end.

Whereas the whole monument is aligned north to south, cutting across the hill contours, the terraced area is aligned east to west, running parallel to the contours. The terrace is therefore 6 metres long east to west, by 4.5 metres wide, north to south.

When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was molinia with grass on the fan.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Near Intact Earthwork

2022/2023 Survey Description:

A sub-rectangular earthwork enclosure which measures 14 metres northwest to southeast, by 13 metres northeast to southwest. It is defined by a broad earthwork bank, which measures 2 metres wide at base, by 0.5 metres high. There is an internal ditch inside the bank. There is a gap in the north corner of the enclosure, where the bank and ditch are absent. There appears to be a levelled platform at this point, which measures 9 metres long, northwest to southeast, by 5 metres wide. This platform is likely to have been the location of a now lost timber-framed house which would have completed the circuit of the enclosure boundary. This arrangement compares strongly with the nearby enclosure and platform ID number 2055, 1.3 kilometres away to the east-southeast.

Damaged Earthwork

2022/2023 Survey Description:

A longhouse defined by low, stony wall bases. It is oriented north-northeast to south-southwest and measures 13m long by 4m wide. The wall bases are covered in moss and bracken. The longhouse has two cells with the upper part to the south-southwest end. This upper cell is 5 metres long to the internal division, where there is a 0.4m step down into the lower cell. The building is found inside the enclosure ID number 391. When visited in 2023 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was bracken, grass and moss.

2022/2023 Survey Description:

A linear drain, stone faced on both sides, with coping slabs along the top edge. It runs for some 410 metres and measures 0.80 metres wide at the top with a depth of 0.60 metres. It is now quite obscured by vegetation with a clapper bridge (ID number 3348) across it towards its southern end. There is a bank alongside to the western side formed by material dug out when creating or cleaning the drain. At SN9220165709 the drain goes underground, emerging again at SN9215865780, with a stone slab cap across the opening. At SN9223065666 the drain turns to run to the south-southwest, just before the bridge. At SN9221365625 it turns to the south-southeast and runs for 100 metres, ending at SN9225265534. When visited in 2023 as part of the NLHF funded Elan Links project, this area was used for rough pasture and the vegetation cover was heather, moss and grass.

Damaged Earthwork

2022/2023 Survey Description:

An irregular pile of stones with no obvious structure, measuring 2 metres by 1.5 metres . It is not clear if it is a natural feature or a clearance cairn, but there are many definite clearance cairns nearby. This area was the site of a tree nursery during the 19th century, which may explain why stone clearance was undertaken. When visited by Trysor in 2022 as part of the NLHF funded Elan Links project, this site was used for rough pasture and the vegetation was grass and heather.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None

Confidence in Accuracy of Record:

Confidence Before Survey?:

Confidence After Survey?: **Moderate**

There are many of these irregular piles of stones and some are definitely created and others less clear like this one.

If visited, date of the visit: 08-May-2022 JJH & RPS Trysor

Near Intact Earthwork

2022/2023 Survey Description:

A small Bronze Age cairn discovered by David James, Rhayader. It measures approximately 6 metres in diameter and is seen as an upstanding grassy mound surrounded by thick Molinia. Stone is visible protruding through the grass over the cairn. At the centre of the mound is an upstanding stone cairn or shelter which appears to have been created at a later date using stone from the funerary cairn. There is no evidence that the cairn has been dug into at any point however and archaeologically it is probably undisturbed below ground. It is possible that this cairn corresponds with a small ring cairn PRN44037 identified by CPAT in 2004, which was described as being 3 metres to 3.5 metres in diameter. That description may only have applied to the later cairn or shelter on top of the main body of the cairn. PRN44037 was however given a grid-reference some 350 metres further to the southeast but has not been found at that location by subsequent surveys.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

Consider for scheduling, especially in view of its connection to the wider group of Bronze Age monuments on Rhosygelynnen

Intact Structure

2022/2023 Survey Description:

A modern aqueduct which is effectively a wooden launder supported by three pillars built of concrete breeze blocks, reinforced by steel beams. It is a modern structure thought to have been built to carry a water pipe from a spring to the south of the Nant Gwyllt Stream to Penglaneinion farm to the northeast.

Damaged Earthwork

2022/2023 Survey Description:

A denuded boundary bank with a slight ditch along its outer side. It forms the east and south sides of a large rectangular field parcel, using a large bend in the Nant Hesgog stream to form the west and north sides of the enclosed area. The bank runs north-northeast to south-southwest from the south side of the Nant Hesgog for some 165 metres from SN9145069400 to SN9140469243 before turning to the west and running for another 175 metres before ending close the Nant Hesgog at SN9123569259. The total length of the bank is about 340 metres.

Unknown Documentary Evidence

2022/2023 Survey Description:

A circular depression visible on the 2023 LiDAR coverage which appears to be a platform of unknown date and purpose. It measures circa 12 metres in diameter and is cut into the slope at its northwestern side. Its shape may indicate that it is prehistoric rather than medieval or later. A second circular platform is shown on LiDAR some 35 metres to the south-southwest.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Erosion**

A trackway runs across the platform

Management Recommendations:

Requires confirmation in the field.

Confidence in Accuracy of Record:

Confidence Before Survey?: Confidence After Survey?: **Moderate**
Clearly visible on Lidar, but purpose not known

Damaged Structure

2022/2023 Survey Description:

The site of a ruinous rectilinear structure, though to be ancillary to long hut ID number 92, which lies immediately downslope. This building survives as a stone foundation, best preserved at its northern end, with the eastern wall also defined by jumbled stone, with the western side difficult to identify, being abutted by a trackway and the south side more weakly represented by some surviving stone. It measures 5 metres north to south by 3.5 metres wide. It may be a shelter, but could also be a long hut of similar dimensions to the adjacent long hut ID number 92, with the loss of its western side affecting the interpretation of the structure.

Damaged Ruined Building

2022/2023 Survey Description:

A building shown only on the 1888 Ordnance Survey as ancillary to Llwyn Dale cottage ID Number 14. It stood against the southern edge of the garden plot to the east of the cottage, apparently using the garden wall as its northern side. Its southern wall is now only a low wall base, running alongside the edge of the trackway leading up the Rhiwnant valley. It was a long, narrow building, measuring 10 metres in length west-southwest to east-northeast, by 3 metres wide. Outside its eastern end, the 1888 map shows a small, square, unroofed cell, within which the remains of a stone built oven still survived When visited by Trysor in 2022. The purpose of this building is not known, but it was not shown on later Ordnance Survey maps. When it was recorded by Trysor in 2022 as part of the NLHF funded Elan Links project, the area was used for rough pasture and the building was being encroached upon by bracken.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Low** **Erosion**

The building remains are unrecognised but are close to the trackway and could be impacted upon by walkers and vehicles on the trackway. Bracken also now covers the site.

Management Recommendations:

Monitor. Manage bracken?

Damaged Structure

2022/2023 Survey Description:

A stone oven survives close to the ruins of Llwyn Dale cottage, ID Number 14. The oven was located within an unroofed compartment at the eastern end of an ancillary building to Llwyn Dale, and was built into the southern wall of the garden enclosure. It has a stone base, with an opening in its southern side, with an earth mound covering its top and northern side, with a flue opening on its eastern side. When the feature was recorded by Trysor in 2022 as part of the NLHF funded Elan Links project, the area was used for rough pasture and the feature was being encroached upon by bracken.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Yes** **Moderate** **Natural Decay**

This structure is decaying, with its earth cover eroding. Bracken has invaded the site and is hastening its decline.

Management Recommendations:

Monitor. Manage bracken. Establish grass on the mound perhaps to stabilise it.

Near Intact Earthwork

2022/2023 Survey Description:

This is the site of a small water tank or reservoir above the Nant y Garw Lead Mine. It was created by the construction of a V-shaped earthwork dam, 12 metres long north-northeast to south-southwest, with the apex of the V on the southern or downslope side and the top of the V left open, measuring 15 metres wide. It was fed by a leat (ID number 608) which drew water from the stream further to the northwest. A run-off channel to the east side of the reservoir is visible, which would have allowed water to overflow southwards back to the stream below. It is unclear how water was taken from this reservoir to the mine site.

Near Intact Earthwork

2022/2023 Survey Description:

A long leat constructed in the later 19th century to carry water to the Nant y Garw Lead Mine. It runs for approximately 1.9 kilometres and appears to start at SN8628159592, taking water from the upper reaches of the Rhiwnant stream, to the southwest, and crossing Nant yr Hwch. At its northern end it feeds into a natural rill above and just south-southwest of the Nant y Garw Lead Mine. Water could then flow naturally down the rill into the Nant y Garw stream, just upstream from the mine site and then be used to power the waterwheels at the mine.

Near Intact Complex

2022/2023 Survey Description:

A group of six small, stone cairns is found some 15 metres to the north-northeast of the Bronze Age Pen y Gorllwyn Cairn I. These cairns may be Bronze Age satellite cairns to the larger Pen y Gorllwyn Cairn I. When recorded in 2022 it was noted that two of the cairns had metalwork set into them. They appear to have been used to secure the base and supports for a small mast in modern times. It is also possible that the cairns were created as fixing points for cable supports for the mast.

Damaged Complex

2022/2023 Survey Description:

The site of the workers' village which was constructed and occupied during the period that the Graig Goch Dam was built. The surviving remains consist of two earthwork platforms between the former line of the Elan Valley Railway No.4 and the waters of the Penygareg reservoir below. The upper platform measures 50 metres west-northwest to east-southeast, by 12 metres wide. The lower platform measures 115 metres long on the same alignment, by 12 metres wide. Historic photographs show that there were probably four adjacent wooden buildings standing on this platform when the settlement was occupied. Only one wooden building seems to have stood on the upper platform.

Heritage at Risk 2016 Description:

Intact Structure

2022/2023 Survey Description:

A modern water tank built to tap into a natural spring to supply water to nearby Ty'n y Llidiart house. It is a brick-built chamber with a concrete cap and measures about 1.5 metres square.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

None. This was recorded as NPRN 26278 by CAP but that record was in fact created for an earlier Spout to the south and wrongly associated with this modern tank. This also applies to PRN67868. This tank has no previous record therefore.

Not Known Documentary Evidence

2022/2023 Survey Description:

The site of Crinwgm farmhouse, which is shown at this location on the 1820 Ordnance Survey's Original Surveyors' Drawings and also on the Ordnance Survey's 1:10560 scale map of 1888. By the time of the second edition of the latter map, published in 1905, the house had been abandoned and is not shown on the map. Stephen W. Williams noted in 1898 that the house had been home to a tenant shepherd until some years previously and it was kept in good repair. However, by 1898 it had been abandoned and fallen into disrepair. CAP appear to have noted some parts of the walls of the building in 2002 during upland survey work but did not associated these with the house, but rather focused on a raised "platform" at the same site.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **Not Identified**

Management Recommendations:

This cottage site has been lost since the late 19th century and recent attention appears to have been focused on the former barn to the north, which has been taken to be the house site. A new survey is required to synthesise the available records and also record the field evidence pertaining to the cottage.

Confidence in Accuracy of Record:

Damaged Structure

2022/2023 Survey Description:

A ruined longhouse, which is defined by stony wall bases, now standing up to 0.5 metres high by 0.7 metres thick. The building, overall, measures 10 metres long, north to south, by 4.5 metres wide, although the spreading of the wall bases in all directions adds to the footprint of the building. Internally, there is a step down in floor level at the centre of the building, a feature typical of a longhouse which had a penllawr (upper floor level for the house) and isllawr (lower floor level for the animal byre). The only entrance noted is through the eastern side of the north cell, measuring 0.9 metres wide. Outside the longhouse, a short wall runs westwards off the southwest corner, and another short wall runs northeast from the area of the northeast corner towards the bank of the adjacent stream, though there is a gap of some 1.5 metres between the longhouse and this second wall.

Damaged Structure

2022/2023 Survey Description:

This feature was first recorded by CPAT in 1994 as a "Platform" but their ground photographs and description indicate that it was in fact a long hut or shelter, with ruinous stone wall bases. Cadw scheduled the site as a "small, ruined building by the side of the stream" in 1994.

It was not found by Trysor during field survey in 2022 as the area was under thick bracken and the grid-reference given to this feature was evidently incorrect. Analysis of the 1994 CPAT ground photographs and LiDAR coverage suggest that the feature is located some 25 metres to the northwest of the coordinates originally provided by CPAT. The structure appears to be aligned northeast to southwest and to have measured 6 metres long by 4 metres wide, defined by rough stone wall bases spread over 1 metre wide by 0.3 metres high. The northwest end may have been left open, which may indicate that it is a shelter, rather than a long hut.

Damaged Structure

2022/2023 Survey Description:

A ruined, drystone long hut, which is aligned northwest to southeast. It measures 11 metres long, by 4.5 metres wide. It appears to have no internal division. CPAT recorded a 1 metre wide entrance through the northeast wall. Unusually, this building has a long, narrow cell appended to its southwest lateral wall, which measures 3 metres wide in total, by 9.5 metres long. Internally, it measures only 1.5 metres wide by 8.5 metres long. It seems likely that this is a shelter or sunken shelter used for storage. When visited by Trysor in 2022 this site was largely obscured by bracken.

Damaged Structure

2022/2023 Survey Description:

A small, square pen or fold attached to the northeast wall of the larger enclosure ID number 5103. It measures about 2 metres square and its drystone walls are ruined and stand up to 0.3 metres high.

It has been described by Cadw in its scheduling description as a "small circular hut" incorporated into the wall of the enclosure. When visited by Trysor in 2022 it was heavily obscured by bracken, but was clearly seen to be a feature deliberately built into the enclosure boundary and of contemporary date, presumably serving as a small animal or fowl pen. It is markedly square, not circular, and part of the medieval or early post-medieval Esgair Gwar-y-cae settlement.

Damaged Earthwork

2022/2023 Survey Description:

The site of a long-drained pond to the northwest of the farm buildings at Ciloerwynt. It survives as a sub-circular hollow, with an earthwork dam to the southeast side. Overall it measures 45 metres northwest to southeast, including the dam, by 30 metres wide. The date of the pond is not known, but it is not shown on any historical mapping and the field was named as "Garden Field" on the 1840 tithe schedule. It appears likely to be pre-19th century in date. It is thought that it may have been fed by a leat (ID number 3071) which runs down from the valley to the north of Ciloerwynt and can be followed until it is cut across by the present trackway to the north-northeast of the pond.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

This pond could be of early post medieval or even medieval origin and may be suitable for further study, especially in view of its associated with the celebrated farm of Ciloerwynt, which is known to have been occupied in the 15th century.

Damaged Ruined Building

2022/2023 Survey Description:

The site of a long abandoned and ruinous cottage or long hut situated on a natural terrace at the south end of Graig Dolfaenog, overlooking the Elan Valley to the west. The site was not surveyed in 2022 due to thick bracken over the area, but LiDAR and modern aerial photographs shows its key characteristics.

The building appears to consist of the wall bases of a two-part structure, measuring about 15 metres long overall, east-northeast to west-southwest, and up to 5 metres wide. The eastern part of the range appears to have been a long hut or cottage measuring 8 metres long, by 5 metres wide. There is no evidence of an internal division, but scattered stone at each end may be evidence that there building had stone gables.

At the western end is a slightly smaller section of the range, which measures 6 metres long by 4 metres wide and has one, possibly 2, subdividing walls. This may have been an animal byre.

The range is built across the eastern side of a rectilinear enclosure (ID number 5111). The date of these features is not known, but the site does not appear on any 19th century historic mapping, therefore it is likely to be of pre-19th century date.

Heritage at Risk 2016 Description:

Identified Threats:

Threat?: **No**

Management Recommendations:

This site remains unsurveyed and needs a winter time visit for a measured plan and photo survey to be made. David James and Vic Pardoe have taken drone photographs of the site in winter.

2022/2023 Survey Description:

The site of a rectilinear enclosure which measures 26 metres north-northwest to south-southeast, by up to 18 metres wide. It is markedly rectilinear to its north end, but has a rounded south end. The defining banks are substantial, up to 2 metres wide at base, and have an external ditch.

The enclosure is associated with a long abandoned and ruinous cottage or long hut situated on a natural terrace at the south end of Graig Dolfaenog, overlooking the Elan Valley to the west. The site was not surveyed in 2022 due to thick bracken over the area, but LiDAR and modern aerial photographs shows its key characteristics.

The long hut or cottage (ID number 5110) is built across the eastern side of the enclosure. The date of these features is not known, but the site does not appear on any 19th century historic mapping, therefore it is likely to be of pre-19th century date.

2022/2023 Survey Description:

An curving earthwork bank which measures about 120 metres in its entirety. It appears to enclose a natural terrace on the lower part of the steep slope to the north side of the Nant y Blymbren stream. It runs upslope to the west side of the terrace, curves eastwards and then back downslope to the east side of the terrace. Its purpose and age are not known, but it may enclose the site of a deserted settlement, as LiDAR and ground photographs from the south suggest that there are further earthworks, including a possible platform, within the U-shaped enclosure. It could not be surveyed in 2022 due to thick bracken cover.

Heritage at Risk 2016 Description:

Near Intact Earthwork

2022/2023 Survey Description:

An enclosure created around an earthwork platform (ID number 1299) to the west side of the Afon Elan near Pont ar Elan. The enclosure covers an area of about 0.35 hectares and is formed by a 60 metre length of earthwork bank along its northwest side, a 60 metre length of natural slope along its southwest side and then the river bank along the southeast and northeast sided. The earthwork bank is quite broad, up to 5 metres wide at base at its widest point, and 0.3 metres high. There is a gap in the bank which gives access to the platform, which abuts the southeast face of the bank.

Near Intact Earthwork

2022/2023 Survey Description:

A substantial earthwork bank which crosses Cefn Gwair from south-southwest to north-northeast. At the northern end it now runs into the waters of the Graig Goch reservoir at SN8950969844. To the southern end it stops at a minor stream at SN8933369303. The bank appears to define an area of ridge and furrow cultivation to the east. It does not appear on historic mapping, including the 1840 tithe map.
